

This is a digital copy of a book that was preserved for generations on library shelves before it was carefully scanned by Google as part of a project to make the world's books discoverable online.

It has survived long enough for the copyright to expire and the book to enter the public domain. A public domain book is one that was never subject to copyright or whose legal copyright term has expired. Whether a book is in the public domain may vary country to country. Public domain books are our gateways to the past, representing a wealth of history, culture and knowledge that's often difficult to discover.

Marks, notations and other marginalia present in the original volume will appear in this file - a reminder of this book's long journey from the publisher to a library and finally to you.

Usage guidelines

Google is proud to partner with libraries to digitize public domain materials and make them widely accessible. Public domain books belong to the public and we are merely their custodians. Nevertheless, this work is expensive, so in order to keep providing this resource, we have taken steps to prevent abuse by commercial parties, including placing technical restrictions on automated querying.

We also ask that you:

- + *Make non-commercial use of the files* We designed Google Book Search for use by individuals, and we request that you use these files for personal, non-commercial purposes.
- + *Refrain from automated querying* Do not send automated queries of any sort to Google's system: If you are conducting research on machine translation, optical character recognition or other areas where access to a large amount of text is helpful, please contact us. We encourage the use of public domain materials for these purposes and may be able to help.
- + *Maintain attribution* The Google "watermark" you see on each file is essential for informing people about this project and helping them find additional materials through Google Book Search. Please do not remove it.
- + *Keep it legal* Whatever your use, remember that you are responsible for ensuring that what you are doing is legal. Do not assume that just because we believe a book is in the public domain for users in the United States, that the work is also in the public domain for users in other countries. Whether a book is still in copyright varies from country to country, and we can't offer guidance on whether any specific use of any specific book is allowed. Please do not assume that a book's appearance in Google Book Search means it can be used in any manner anywhere in the world. Copyright infringement liability can be quite severe.

About Google Book Search

Google's mission is to organize the world's information and to make it universally accessible and useful. Google Book Search helps readers discover the world's books while helping authors and publishers reach new audiences. You can search through the full text of this book on the web at <http://books.google.com/>

13-1

Entered, according to Act of Congress, in the year 1858,

By H. PHELPS & CO.

in the Clerk's Office of the District Court of the United States in and for the Southern
District of New York.

P R E F A C E.

THE Publishers, in issuing the present work, desire to briefly state some of the causes which have induced them to present it for public patronage.

FIRST, the Reasons that demand a New Gazetteer of the United States.

1. Since the census, taken in 1840, such extensive and essential changes have taken place in our vast republic, that one would scarcely recognise the present, by the most faithful picture of that ten years ago.

Within that time there have been added to the territory of the republic, by annexation, conquest, and purchase, 833,970 square miles; and our title to a region covering 341,463 square miles, which before properly belonged to us, but was claimed and partially occupied by a foreign power, has been established by negotiation and been brought within our acknowledged boundaries. By such means the area of the United States has been extended during the past ten years, from 2,055,163 to 3,230,572 square miles, without including the great lakes which lie upon our northern border or the bays which indent our Atlantic and Pacific shores. Five new states have been admitted to the Union, and five new territories organized within the same period. Of course old Gazetteers can not faithfully give the present condition of the country.

2. Another reason for a new work is, that existing ones are inaccessible to the masses, by reason of their size and extravagant price, or are small, imperfect in their details and range of subjects, and entirely local in their interest. While the publishers do not claim entire perfection, in the present work, they yet have endeavored most earnestly, in all of these respects, to meet the demands for a new Gazetteer.

SECOND, the Plan of this Work.

The plan is simple; indeed, the design of such a work suggests the plan to be pursued in its compilation. It is not a work of biography, nor of history, nor of science, nor of art, but one descriptive of the country as it is, especially of its geographical and statistical facts; also, with such reference to the commercial and political relations of the principal places named, as may be desirable or practically useful.

Concise and comprehensive in its plan and composition, the publishers believe it is just such a book as the people desire in a Gazetteer of the United States.

THIRD, the Reasons that especially commend this Book to the Favor of the Public.

1. The returns of the late census giving the population of towns, have been procured at considerable cost, from the department at Washington in advance of the publication of the official reports, and are accessible in this work before they can be had through any other source.

2. It contains *Thirty-one State Maps*, executed at great expense, and which, for the first time, are introduced into a Gazetteer. The maps are divided into counties, and will be of invaluable service to persons desirous of correct information of every part of the country.

3. Another new feature of this work is the presentation of beautifully engraved and very expensive *Maps of Fourteen of the principal Cities* of the Union. These must prove a rare acquisition, to those desirous of becoming familiar with the topography of our great and most important cities.

4. The *price* of the present volume being only *one half* that of works of a similar character, places it within the means of the multitude; and the publishers are confident they will cheerfully respond to efforts to meet their wants, by extending to this Gazetteer a liberal patronage. Indeed, the *Maps of States and Cities* alone would cost, by ordinary purchase, more than the price of the whole book.

NEW YORK, June 1, 1853.

Ky.....	Kentucky.		
O.....	Ohio.		
Mich.....	Michigan.		

NOTE—There are generally several villages and post-offices in a town in New England, and in a township in New York and the Western States, these villages and post-offices are known by distinct names, for the purposes of convenience. While there may be a number of townships of the same name in a state in different counties, it is a general rule to avoid having more than one post-office of the same designation in a state.

Counties are called districts in South Carolina, and parishes in Louisiana. There are no such marked sub-division of counties in the southern, as exist in the northern states, the dwellings being more scattered; the centre of a district is generally the court-house.

The population is only made out by towns and townships at the census office, so that it is impossible to give the population of each village in their bounds separately. Where no year is stated before the population, it is that of 1850.

DESCRIPTION OF THE UNITED STATES.

THE "United States of America" is the most interesting and important division of the western hemisphere. Comprising a territory equal in extent to that of half of the kingdoms and principalities of Europe combined, with a population exceeded by but three or perhaps four of the European states, and numbering scarce three fourths of a century since it broke loose from the leading-strings of the mother-country, the American republic stands unparalleled in the history of the rise and growth of nations. The territory of the United States lies between the meridians of 67° and 125° longitude west from Greenwich, and the parallels 24° and 49° of north latitude. It is bounded by the Atlantic ocean on the east, and the Pacific on the west; by the British possessions on the north, and the republic of Mexico and the great gulf of that name on the south. It comprises an area of over 3,200,000

square miles. The frontier line has a length of about 10,000 miles, and about 5,000 miles of sea and lake coast.

PHYSICAL ASPECT.—A territory of such vast extent must of course comprise a great variety of surface, soil, and climate. A large proportion of it is not only susceptible of cultivation, but has a fertile soil capable of supporting a dense population. There are but few barrens, and no great deserts, except one in the territory of Utah. It is numerously threaded by navigable streams, besides immense lakes, which not only give fertility to their borders, but are available in bearing the gifts of the soil to domestic and foreign markets, and in bringing back to the inhabitants the products and luxuries of other climes.

MOUNTAINS.—The territory of the United States is traversed by several chains of mountains. The Allegany, or Appalachian range, on the Atlantic side, runs in a northeasterly direction, from the northern part of Georgia to the gulf and river of St. Lawrence, stretching along in uniform ridges, at the distance of from 250 to 80 miles from the seacoast, and following its general directions. It occupies in breadth a space of from 60 to 120 miles, and separates the waters which run into the Atlantic ocean, from those which flow into the Mississippi and its tributaries. The highest elevation in this range, and the most prominent in the Atlantic states, is Black Mountain, in the western part of North Carolina; it is 6,476 feet in height. The general elevation is from 2,000 to 3,000 feet above the level of the sea. The Rocky mountains, situated about 800 miles from the Pacific coast, are on a much grander scale than the Alleganies. Their base is about 300 miles in breadth, and their loftiest summits, covered with everlasting snow, rise to the height of from 12,000 to 18,000 feet above the level of the sea. These vast chains may be considered as a continuation of the Cordilleras in Mexico. The Sierra Nevada is a range of mountains extending through California, and from these branch off to the northwest the Cascade range, which traverses Oregon into the British territories. Both these ranges become more elevated as they extend farther north, where some of their peaks enter the regions of perpetual snow. Still farther west is the Coast range, running almost parallel to, and at a short distance from the Pacific coast. Other minor ranges will be found described in the states in which they are situated.

BAYS.—The principal bays and sounds on the Atlantic border are—Passamaquoddy bay, which lies between the state of Maine and the British province of New Brunswick; Massa-

chusetts bay, between Capes Ann and Cod; Long Island sound, between Long Island and the coast of Connecticut; Delaware bay, which sets up between Cape May and Cape Hopen, separating the states of New Jersey and Delaware; Chesapeake bay, which communicates with the ocean between Cape Charles and Cape Henry, extending in a northern direction for 200 miles, through the states of Virginia and Maryland; Albermarle sound and Pamlico sound, on the coast of North Carolina. There are no large bays or sounds on the coast of the gulf of Mexico. On the Pacific coast, however, there are several excellent bays, but the principal, and only one necessary to mention, is the bay of San Francisco, in the newly-acquired domain of California.

LAKES.—The chain of inland seas, on the northern boundary, are unsurpassed in any country for size and utility. Their dimensions are as follows:—

Names	Length in miles.	Breadth in miles.	Circumference, in miles.	Average depth in feet.	Elevation above the sea.
Superior.....	420	140	1,500	1,000	627
Huron.....	250	220	1,200	860	594
Michigan.....	300	80	800	780	
Erie.....	265	63	700	250	565
Ontario.....	180	60	500	500	234
Champlain.....	105	12	235		

Lakes Michigan and Champlain are the only two of these lying wholly within the United States. Lakes Superior, Huron, Erie, and Ontario, have the boundary between the United States and the British provinces, running directly through their centre. The other lakes of any magnitude in the United States are Lakes George, Oneida, Otsego, Skaneateles, Owasco, Cayuga, Seneca, Crooked, Canandaigua, Honeoye, Chautauque, and Canesie, all in New York; Moosehead, Chesuncook, Pemadumcook, Moosetogmaguntic, Sebago, and Schoodic, in Maine; Winnipiseogee, in New Hampshire; and Memphremagog, between Canada and Vermont. In Louisiana, are the great lakes of Pontchartrain, Borgne, Ouacha, Grand, and others formed by the waters of the Mississippi; Bodeau, Cadoe, Bistineo, Caunisia, Bayou-Pierre, Spanish, Black, and others formed by the Red river and its branches. In Wisconsin, is Lake Winnebago, formed by Fox river. There are several extensive lakes and everglades also in Florida, of which Okeechobee is the principal. In California are the Tulare lakes, and the Pyramid lake, in the centre of which stands a natural granite pyramid. There is also the Great Salt lake in the territory of Utah.

RIVERS.—The rivers of the United States are numerous, and some of them among the most important, and affording facilities for inland navigation and trade unparalleled in any section of the globe. They may be divided into four great classes: 1st. The streams which rise on the east side of the Alleghany mountains, and flow into the Atlantic ocean; 2d. Those south of the Alleghany range, which discharge themselves into the gulf of Mexico; 3d. The Mississippi and its wide tributaries, which drain the waters of the vast valley included between the Rocky and Alleghany ranges; and 4th. The rivers which, rising on the western declivity of the Rocky mountains, direct their course to the Pacific ocean. The Mississippi is the largest river in the United States, and one of the noblest in the world. Its course, in conjunction with its great auxiliary, the Missouri, is about 4,200 miles. The Mississippi rises west of Lake Superior, in latitude $47^{\circ} 47'$ north, amid lakes and swamps, in a dreary and desolate region, and after a course southeast for about 500 miles, reaches the falls of the St. Anthony. Thence it flows in a southeasterly and then a southerly direction, and discharges its waters into the gulf of Mexico. The principal tributaries of the Mississippi from the east are the Wisconsin, the Illinois, and the Ohio, which is itself formed by the junction of the Alleghany and Monongahela, at Pittsburgh. The chief tributaries of the Ohio are the Wabash, the Cumberland, and the Tennessee. The principal tributaries of the Mississippi from the west, are the St. Peter's, the Des Moines, the Missouri, the Arkansas, and the Red river. The Missouri enters the Mississippi river about eighteen miles above St. Louis, after a course of 3,217 miles, and being much the longer and larger stream of the two, should properly carry its name to the gulf of Mexico, but the Mississippi, having been first discovered and explored, has retained its name through its whole length. The Missouri is formed of numerous branches, which rise among the Rocky mountains, between the parallels of 42° and 48° north latitude, the principal of which are the Yellow Stone, the Nebraska or Platte, and the Kansas. The most remote are the Jefferson, Madison, and Gallatin rivers. The only obstruction that occurs to its navigation is at the Great Falls, a distance of 2,000 miles from the Mississippi. The principal rivers east of the Alleghany, emptying into the Atlantic, are the Penobscot, Connecticut, Hudson, Delaware, Susquehanna, Potomac, James, Roanoke, Great Pedee, Santee, Savannah, and Altamaha. The principal rivers which rise south of the Alleghany, and fall into the gulf of Mexico, are the Appalachicola, which is formed by the junction of the Chattahoochee and Flint rivers; the Mobile, which is formed of the Alabama and Tombigbee, which unite near latitude 31° , after a separate course of several hundred miles, and the Colorado, Brazos, and Rio Grande del Norte, in Texas. The latter stream, and the Gila which empties into the gulf of California, nearly form the

boundary line between the United States and Mexico. The rivers flowing from the Rocky mountains to the Pacific are, the Columbia, in Oregon, which rises near latitude 55° north, and falls into the Pacific ocean, after a course of 1,500 miles. Its principal tributaries are Clarke, Lewis, Colville, and Willamette rivers. The Colorado, in California, after a course of 1,000 miles, empties in the gulf of California. The other rivers in California are the Sacramento and San Joaquin, which empty into the bay of San Francisco, and the Buena-ventura, which empties into the bay of Monterey.

CLIMATE.—The United States, though lying within the temperate zone, embraces almost every variety of climate. In the northern parts, the winters are long and severe; snow often falls to the depth of three or four feet, and the cold is so piercing as to oblige the inhabitants to make very diligent provision against it. Spring returns here in April, and the heat is great in summer. In the southern parts of the country, snow is seldom seen, ice is rarely formed in the rivers, and those fruits which shrink from a northern climate, and flourish only in warm regions, are scattered over the soil. In Georgia, the inhabitants may load their tables with oranges, lemons, and other exquisite fruits that grow in their gardens and groves, while in parts of Maine, New Hampshire, and Vermont, even peaches will not flourish. Between these extremities, as in Virginia, Kentucky, Missouri, Illinois, and California, there is a region adapted to the wine-grape, which thrives best in places removed from both the torrid and frigid zones.

PUBLIC LANDS.—The public lands form a very important feature of the national wealth. The property of the soil within the limits of the United States, not owned by the several states, or by individuals, is vested in the general government. They are principally located in the western and southwestern states and territories, and in California and Oregon. The following table exhibits the number of acres of the public domain that have been sold, and remaining unsold and unappropriated, to the first of July, 1852:—

	Acres sold.	Acres unsold.		Acres sold.	Acres unsold.
Ohio.....	12,646,858	885,264	Utah Territory.....	118,589,013

Swamp lands to states.....	28,156,671

MINERALS.—Minerals abound in the United States in great variety and profusion. It has all the useful, as well as all the precious metals. Iron is very generally diffused, and is very abundant. Coal, both bituminous and anthracite, is found in great quantities, especially in Pennsylvania, Virginia, Ohio, Indiana, Illinois, and Tennessee. Rich copper mines exist in Michigan and some other states, and lead mines in Missouri and Illinois. The gold mines of California seem inexhaustible; quicksilver mines have also been profitably worked there. Granite, marble, and other building stones, are found in every section of the country. Salt springs abound in many parts of the Union, and large quantities of salt are manufactured in New York, Western Pennsylvania, Western Virginia, Ohio, and Illinois; it is also made from sea-water in some parts of New England.

FISHERIES.—The fisheries of the United States are extensive and valuable. About 250 vessels and about 12,000 seamen and landsmen are employed in the whale-fishery. The products of this fishery amount to from 400,000 to 500,000 barrels of oil annually. The cod-fishery is pursued off the coasts of New England, and as far north as Labrador, and about 100,000 tons of shipping are thus employed. The mackerel fishery employs about 60,000 tons of shipping.

COMMERCE.—In the extent and prosperity of its commerce, the United States is second only to Great Britain. There is no part of the globe to which American merchantmen do not find their way; and the coasting and inland trade is carried on to a far greater extent. The foreign exports are confined principally to agricultural products, with naval stores, timber, and other productions of the forest. The imports are European manufactures, principally of the finer descriptions, and the productions of the tropics, as sugar, coffee, spices, wines, &c. The table of imports, exports, revenue from customs, public lands, &c., with the tonnage employed in foreign commerce, and the public debt of the United States, from 1791 to 1852, will be found on the succeeding page, exhibiting the rapid progress of the country.

IMPORTS, EXPORTS, REVENUES, TONNAGE, DEBT, &c., OF THE U. STATES, FROM 1791 TO 1853.

* For nine months.

† For six months.

‡ Year ending June 30.

MANUFACTURES.—The manufactures of the United States are various, comprising almost every article known to commerce. From the great variety of soil and climate, producing in abundance every species of raw material, the cheap and inexhaustible supply of moving power furnished by innumerable running streams, combined with the improvements which are every day taking place in machinery, the United States is destined eventually to distance all other countries in its progress in this branch of industry. The entire capital invested in manufactures in the United States on the first day of June, 1850, was \$580,000,000; amount paid for labor, year ending as above, \$240,000,000; value of raw materials, \$550,000,000; value of manufactured articles, \$1,020,300,000; persons employed, 1,050,000. For *cotton goods*, there were 1,094 establishments, with \$74,501,031 capital invested, using 256,496,000 pounds of cotton, and 121,099 tons of coal; value of all raw materials, \$34,835,056; number of persons employed, 92,286, producing 763,678,407 yards of sheeting, &c., valued at \$61,869,184. For *woollen goods*, there were 1,559 establishments, with \$28,118,650 capital invested, using 70,862,829 pounds of wool, and 46,370 tons of coal; value of all raw materials, \$25,755,988; number of persons employed, 39,252, producing 82,206,652 yards of cloth, valued at \$43,207,555. For the production and manufacture of *iron*, there were 1,190 establishments, with \$49,258,006 capital invested, employing 57,294 persons, producing 564,755 tons of pig iron, and manufacturing 822,745 tons of castings and 278,044 tons of wrought iron, using 1,374,196 tons of mineral coal and 71,089,814 bushels of coke and charcoal; value of raw material, fuel, &c., used, \$27,049,758; value of entire products, \$54,604,006. For the production of *malt and spirituous liquors*, there was \$8,334,254 capital invested, employing 5,487 persons, consuming 17,582,240 bushels of grain, &c., producing 1,177,924 barrels of ale, &c., 42,133,955 gallons of whiskey and high wines, and 6,500,500 gallons of rum.

POPULATION.—The first census was taken in 1790, since which period there have been six decennial enumerations. Their results are as follows:—

Census Year.	White Persons.	Colored Persons.	Total Population.	Ratio of Increase per cent.
1790.....	3,172,464.....	59,466.....	3,231,930.....	
1800.....	4,304,489.....	108,395.....	4,412,884.....	35.01
1810.....	5,862,004.....	186,446.....	6,048,450.....	36.45
1820.....	7,872,711.....	238,197.....	8,110,908.....	33.12
1830.....	10,537,178.....	319,599.....	10,856,777.....	33.48
1840.....	14,189,705.....	386,295.....	14,576,000.....	32.67
1850.....	19,467,537.....	426,762.....	19,894,299.....	36.25

The following table contains some of the more important details of the population from the census of 1850, classified by states and territories:—

Nativity of the Population.—One of the most interesting results of the census of 1850, is the classification of inhabitants according to the countries of their birth. The investigations under this head have resulted in showing that, of the free inhabitants of the United States, 17,787,505 are natives of its soil, and that 2,210,828 were born in foreign countries; while the nativity of 39,014 could not be determined. It is shown that 1,965,518 of the whole number of foreign-born inhabitants were residents of the free states, and 245,310 of the slave states. It is found that the persons of foreign birth form 11.06 per cent. of the whole free population. The countries whence have been derived the largest portions of these additions to our population, and their relative proportion to each other, appear in the following statement:—

Natives of Ireland in the United States in 1850.....	961,719	43.04	per cent.
Natives of Germany do. do.....	573,225	25.09	do.
Natives of England do. do.....	278,675	12.06	do.
Natives of British America do. do.....	147,700	6.68	do.
Natives of Scotland do. do.....	70,550	3.17	do.
Natives of France do. do.....	54,069	2.44	do.
Natives of Wales do. do.....	29,868	1.34	do.
All other countries do. do.....	95,022	4.47	do.
		2,210,828	

Another interesting branch of this inquiry is that which concerns the inter-migration of our native citizens among the states. The facts developed show how far one section has impressed its own characteristics and peculiar customs on others. It is found that out of 17,736,792 free inhabitants, 4,112,433 have migrated and settled beyond the states of their birth. Three hundred and thirty-five thousand natives of Virginia, equal to 26 per cent. of the whole, have found homes outside of her own borders. South Carolina has sent forth 163,000, which is 86 per cent. of all native citizens of that state living in the United States at the date of the census, and the very remarkable proportion of 59 per cent. of the number remaining in the state of their nativity. North Carolina has lost 261,575 free inhabitants, equal to 31 per cent. by emigration. Among the northern states, Vermont and Connecticut have contributed most largely to the settlement of other parts of the country. Their proportion, about 25 per cent. of their native citizens, would exceed, perhaps, that of either of the southern states already mentioned, were the number of slaves in the latter admitted as an element of the calculation.

Persons subject to Misfortune.—There were in 1850, 5,027 white males, 4,058 females, and 632 colored, deaf and dumb in the United States, being an average of one to each 2,151 persons among the whites, and of one to each 3,005 of the free colored, and one to each 6,552 among the slaves. Of blind, there were 4,519 males, 3,478 females, and 1,705 colored, averaging one to each 2,445 among the white population, one to 870 of the free colored, and one to 2,645 of slaves. Of insane, there were 7,697 males, 7,459 females, and 612 colored, averaging one to each 1,290 among the whites, one to 1,388 of free colored, and one to 11,010 of slaves. Of idiots, there were 3,276 males, 5,954 females, and 1,476 colored, averaging among the whites one in each 1,374, of free colored one in 985, and of slave one in 3,080.

Pauperism.—The whole number of persons who had received the benefit of the public funds of the different states for the benefit of indigent persons, for the year ending June 30, 1850, amounted to 134,972. Of this number there were 68,538 of foreign birth, and 66,434 Americans; while of the whole number receiving support on the first day of June, there were 36,916 natives and 18,437 foreigners, making a total of 50,353 persons. Of those termed Americans, many are free persons of color. The entire cost of the support of these individuals during the year, amounted to \$2,954,806.

Crime.—The whole number of persons convicted of crime in the United States, for the year ending the first day of June, 1850, was about 27,000; of these, 13,000 were native and 14,000 foreign born. The whole number in prison on the first day of June, was about 6,700, of whom 4,300 were native 2,460 foreign.

AGRICULTURAL PRODUCTS, &c.—The agricultural products, live stock, &c., of the United States, according to the census statistics, were, for the year ending June 1, 1850—

				Number of

RAILROADS, &c.—About fourteen thousand miles of railroad are in successful operation in the various sections of the United States, and the same number in progress of construction. They are nearly equal, in the aggregate, to the railroads of all the rest of the world; and if extended in one line, would reach more than halfway round the globe. There are about 5,000 miles of canals in the United States, forming valuable artificial means of navigation for transporting the heavy products of the country; but since the rapid increase of railroad communication, few canals have been commenced. It is within ten years that the first line of telegraph was erected in the United States, and there are now more than 18,000 miles in operation, connecting the most important points of the country with each other, for the instantaneous transmission of intelligence.

EDUCATION.—There is great attention paid to education in most of the states. Common and primary schools are widely distributed, and high schools are numerous. The common schools are supported either by a fund accumulated from various sources, or by taxation; and in the new states and territories 640 acres of the public lands in every township is specially

reserved for purposes of education. There are in the United States 130 colleges and universities, 50 theological seminaries, 16 law schools, and 40 medical schools. Nearly 4,000,000 youth were receiving instruction in the various educational institutions of the country in 1850, distributed in about 100,000 schools and colleges, and employing more than 115,000 teachers. At the same period, there were 2,800 newspapers and periodicals published in the Union, with a circulation of 5,000,000, and an annual aggregate issue of 422,600,000 copies.

RELIGION.—There is no established or national church in the United States, religion being left to the voluntary choice of the people. No special privileges or immunities are granted to one denomination beyond another, it being an essential principle in the national and state governments, that legislation may of right interfere in the concerns of public worship, only so far as to protect every individual in the exercise, without molestation, of that of his choice. The following table gives the number of churches, their aggregate accommodation, average accommodation, and total value of church property of the several denominations in the United States in 1850:—

Denominations.	No. of church's.	Agg. accom- modations.	Ave. ac'n.	Value of ch'h property.	Denominations.	No. of church's.	Agg. accom- modations.	Ave. ac'n.	Value of ch'h property.

GOVERNMENT.—The government of the United States is a confederated republic, each state being independent, and having the exclusive control of all concerns merely local, with its own executive, legislature, judiciary, &c. But the regulation of commerce, the defence of the country, and all the general concerns of the confederacy, are committed, by the constitution, to a general government. The legislative power is vested in a Congress, consisting of a senate and house of representatives. The senate is composed of two members from each state, chosen for a period of six years, and so arranged that one third of the senate is renewed biennially. The members of the house of representatives are chosen every two years. Their number is proportioned to the number of inhabitants, two fifths of the slaves being omitted in the enumeration. The house of representatives represents the people; the senate represents the states. The executive power is vested in a president, who, together with the vice-president, is chosen for four years, by electors from all the states. The principal subordinate officers of the executive department are the secretaries of state, of the treasury, of the interior, of war, and of the navy, the postmaster-general, and the attorney-general. The president must be a native-born citizen, and 35 years of age. The judiciary is composed of a supreme court, of one chief and eight associate judges, of forty-six district courts, held respectively by a district judge alone, and of nine circuit courts, composed of the judge of the district and one of the judges of the supreme court. There are, besides, territorial courts, which are temporary, and lose that character when the territory becomes a state. The present constitution of the United States was adopted in 1789, and has since been amended. It secures to the people the grand principles of freedom, liberty of conscience in matters of religion, liberty of the press, trial by jury, and the right of suffrage in elections.

COLONIAL HISTORY.—The original thirteen states, it is well known, were formerly colonies of Great Britain. The English made the first settlement at Jamestown, in Virginia, in 1607; New York was settled by the Dutch in 1614, and afterward ceded to the English; and at Plymouth, in Massachusetts, in 1620, the first settlement was made by the English in New England. The remaining colonies were principally offshoots from these parent-stems. The dates of their settlements are as follows: New Hampshire in 1628; New Jersey in 1628; Maryland and Delaware in 1627; Connecticut in 1633; Rhode Island in 1636; Pennsylvania in 1640; North Carolina in 1665; South Carolina in 1670; and Georgia in 1732. Among the earliest settlers in North America were many who emigrated from Great Britain on account of civil or religious persecution; men who, being of republican principles, naturally instilled those principles into the minds of their children, and thus laid the foundation of that spirit of resistance to arbitrary acts of power, which kindled the flames of war between the mother-country and the colonies, and ended in the establishment of a powerful republic.

In 1765, a stamp-duty on various articles was imposed by the British parliament on the colonies; but on their remonstrating, this was soon after repealed. But it was subsequently followed by several oppressive acts, against which the colonists remonstrated and petitioned in vain. At length, despairing of redress, a general congress of delegates was called to consult upon the public good. The Congress assembled at Philadelphia, September 4, 1774, and various measures were adopted to obtain justice from the British government. But their

petitions were answered by new aggressions, and their remonstrances were replied to by sending arms to intimidate them, and to coerce them into submission to arbitrary power. The alternate presented was, WAR OR SLAVERY. The colonists chose the former, and made vigorous preparations for the coming storm. The first martyr-blood of the Revolution flowed at Concord and Lexington, Massachusetts, April 19, 1775. The church-bells rang throughout the neighboring region, and the people seized arms and flocked to Boston by hundreds. On the 17th of June following, the battle of Bunker's Hill occurred between 1,500 Americans and about 3,000 British regulars. The enemy was three times repulsed, but at length the Americans were compelled to retreat across Charlestown Neck. Among the Americans slain was the brave General Warren. The loss of the Americans was 450; that of the British upward of 1,000. About the time of the battle of Bunker's Hill, Washington was appointed commander-in-chief, and Congress adopted the army collected at Boston, under the name of the "continental army." He took the command about the first of July, and proceeded to invest Boston. In March following, the British under General Howe evacuated the town, and New England became freed from foreign soldiery. The battles at Lexington and Bunker's Hill had aroused the minds of the colonists to a more determined resistance; and when, in the spring of 1776, intelligence was received of the intention of the king to subdue them at all hazards, public opinion soon became decidedly in favor of union and independence. A resolution was adopted by Congress, on the 9th of June, that "the united colonies are, and ought to be, free and independent states; that they are absolved from all allegiance to the British crown; and that all political connection between them and the state of Great Britain is, and ought to be, totally dissolved." This bold proposition was soon after followed by the appointment of a committee to draft a declaration of independence. This committee consisted of Thomas Jefferson, John Adams, Benjamin Franklin, Roger Sherman, and Robert R. Livingston. The draft was made by Jefferson, and after a few verbal alterations by Dr. Franklin and Mr. Adams, it was submitted to Congress on the 28th of June. It was laid upon the table until the 1st of July, when it was taken up in committee of the whole, and after several amendments were made, nine states voted for independence. The assemblies of Maryland and Pennsylvania refused their concurrence; but conventions of the people having been called, majorities were obtained, and on the 4th of July, votes from all the colonies were procured in its favor, and the thirteen united colonies were declared free and independent states. The contest thus auspiciously commenced, was continued with varied success—victory sometimes perching upon the banner of the patriots, and sometimes rout and disaster—till the defeat and surrender of Cornwallis, with his whole army, at Yorktown, October 19, 1781, proved the death-blow to British power in the United States, and a cessation of hostilities was soon after proclaimed. A preliminary treaty of peace between the United States and Great Britain, was signed on the 20th of January, 1783, and on the 3d of September following, a definite treaty was signed, and speedily ratified, and the United States declared to be "a free and independent nation."

FEDERAL HISTORY.—The year subsequent to the declaration of independence, the united colonies had entered into a compact for the general good, and adopted articles of confederation as organic law for the whole. But when peace returned, and commerce and the arts began to revive, they were found too defective for sound and efficient government, and accordingly, in May, 1787, delegates from the several states met at Philadelphia, and adopted the present federal constitution on the 17th of September following. The government was organized under it, and George Washington, who had commanded the American army through the trying times of the Revolution, was elected the first president. He was inaugurated in the city of New York, on the 30th of April, 1789. Washington filled the presidential chair eight consecutive years, and within that time established a wise financial and foreign policy for the government—the chief features of which were, an economical expenditure, a judicious tariff for revenue, and strict neutrality in relation to the wars of nations in the eastern hemisphere. Vermont, Kentucky, and Tennessee, were admitted into the Union during Washington's administration. Our neutral policy irritated the French, and they not only committed aggressions upon our commerce, but threatened us with invasion. John Adams succeeded Washington in 1797, and in view of the threats of the French, he raised an army and increased the navy. Washington was appointed to the command of the former, but he died soon after. Happily for humanity, the services of the army were not needed. Thomas Jefferson succeeded John Adams as president of the United States in 1801. During his administration a treaty was effected with France (then ruled by Napoleon as first-consul) for the cession of Louisiana to the United States, for which our government paid fifteen millions of dollars. The energetic measures of President Jefferson, made the commercial and political influence of the United States seriously felt in Europe. The scar which England received, in her contest with America during the Revolution, still mortified her pride, and the growing commercial importance of the new republic excited her fiercest jealousy. In her impotent wrath, she committed aggression after aggression, until at length they could no longer be borne with honor; and during the fourth year of Mr. Madison's administration (which succeeded Mr. Jefferson's, in 1809), war was formally declared against Great Britain. This war

was continued until February, 1815, when peace was restored, a treaty having been agreed to at Ghent, by commissioners appointed by both powers. During Mr. Madison's administration, Ohio, Louisiana, and Indiana, were admitted into the Union. The total expenditures of the United States government during the war, may be stated in round numbers at \$100,000,000, and the loss of lives at about 80,000 persons. The war with England had scarcely closed, when the depredations upon our commerce by the Algerine corsairs, rendered it necessary to declare war against that power. A squadron under Commodore Decatur sailed for the Mediterranean in May, 1815, and in a very short time he obtained payment for property destroyed, and treaties highly advantageous to the United States from the dey of Algiers, and the beys of Tunis and Tripoli. James Monroe succeeded Mr. Madison in the presidential chair in 1817. His administration (which lasted eight years) was a quiet one, and no foreign war disturbed the repose of our people. A brief war with the Seminole Indians occurred in 1818; and in 1819 Spain ceded to the United States the whole of East and West Florida, and the adjacent islands. During Mr. Monroe's administration, Mississippi, Illinois, Alabama, Maine, and Missouri, were admitted into the Union. On the admission of the latter state, in 1820, the slavery question first arrayed the North and South as antagonists upon sectional grounds. In 1822, Congress, by an almost unanimous vote, acknowledged the independence of the South American republics. John Quincy Adams succeeded Mr. Monroe, in 1825, and his administration was one of almost unbroken peace and prosperity. Andrew Jackson succeeded Mr. Adams as president in 1829. A tariff law, passed in 1828, caused much discontent at the south, and a threatened rebellion, called *Nullification*, was manifested in South Carolina in 1831-'32. During Jackson's administration, the Indian "Black Hawk war," occurred, and a second war with the Seminoles commenced in 1835; and Arkansas and Michigan came into the Union. Martin Van Buren succeeded Jackson in the presidential chair, in 1837. It was during his administration that the troubles on our Canada frontier took place, when the sympathizing aid which our people lent to the revolted Canadians, came very near involving us in hostilities with Great Britain. Van Buren was succeeded by General Harrison in 1841, but death terminated his earthly career just one month after he was inaugurated, and John Tyler, the vice-president, succeeded him. During Mr. Tyler's administration a new tariff was instituted; Texas, an independent republic, and Florida, were annexed to our confederacy. James K. Polk succeeded Mr. Tyler in 1845, and war soon after followed between this government and that of Mexico, in consequence of the annexation of Texas. General Taylor, with a small force, was sent to the Mexican frontier of Texas to oppose a threatened invasion; and two severe battles were fought between the Americans, under Taylor, and the Mexicans, at Palo Alto and Resaca de la Palma, on the 8th and 9th of May, 1846. General Scott was also sent to Mexico, and there took the chief command. Taylor captured Matamoras and Monterey, and defeated a Mexican army of four times the number of his own forces, at Buena Vista; while Scott, after securing Vera Cruz, pushing on toward the capital. After several successful battles, he hoisted the American flag over "the halls of the Montezumas." A treaty was finally concluded between our government and that of Mexico, by which California and New Mexico became the property of the United States. Iowa and Wisconsin were admitted into the Union, and the Oregon boundary question settled, during Mr. Polk's administration. General Zachary Taylor was elected the twelfth president in 1848. The discovery of gold in California, and the colonization and founding of a new state on the Pacific coast, were the chief events of Taylor's administration. President Taylor died quite suddenly, on the 9th of July, 1850, and was succeeded in office by the vice-president, Millard Fillmore, whose administration was signalized by the admission of California into the Union, and the passage of the compromise measure. On the 4th of March, 1853, Franklin Pierce entered on the discharge of the duties of the executive office, as the fourteenth president of the United States.

ADAMS COUNTY, in the south part of Ohio, situated along the Ohio river. It is about 25 miles square, with an area of 550 square miles. The face of the country is very hilly, sloping toward the Ohio; and the soil varying from the poorest to the best, but generally inclining to the former. Courts are held at Adamsville, and West Union. Pop., in 1830, 12,278; 1840, 13,183; in 1850, 18,883.

ADAMS COUNTY, in the westernmost part of Illinois, bordering the Mississippi river. It is 32 miles in length, with a mean breadth of 24, and contains an area of 768 square miles. The western and most extensive slope declines toward the Mississippi, while that of the east gives rise to the streams running into the Illinois river. Courts are held at Quincy. Pop., in 1830, 2,186; in 1840, 14,476; in 1850, 26,508.

ADAMS COUNTY, south part of Pennsylvania, about 20 miles in length, 18 in width, and contains 360 square miles. The surface is extremely diversified by hill and dale, and the soil varying in quality from the poorest to the best, but generally well-watered. Courts are held at Gettysburgh, the chief town. Pop., in 1820, 19,681; in 1830, 21,379; in 1840, 23,044; in 1850, 25,981.

ADAMS COUNTY, in the southwest part of Mississippi, bordering on the Mississippi and Homochitto rivers. It is 40 miles in length, with a mean breadth of about 15, and an area of about 600 square miles. The surface is by hill and dale, the soil fertile and well-watered. Courts are held at Natchez. Pop., in 1820, 12,073; in 1830, 14,919; in 1840, 19,434; in 1850, 18,069.

ADAMS COUNTY, on the east side of Indiana. Watered by Wabash and St. Mary's rivers, and contains 336 square miles. Courts are held at Decatur. Pop., in 1840, 2,264; in 1850, 5,797.

ADDISON COUNTY, in the west part of Vermont, lying along Lake Champlain. It has a mean length of 25 miles, and an average breadth of 20, and containing 500 square miles. The surface, although not mountainous, is agreeably diversified by hill and dale, the soil fertile, generally well-cultivated, and suitable for grazing and staple crops. Otter river flows obliquely through this county, which, by its numerous tributaries, affords several excellent mill-sites. Courts are held at Mad-dlebury. Pop., in 1820, 20,620; in 1830, 24,940; in 1840, 23,583; in 1850, 26,549.

ALABAMA, one of the United States, lies between $30^{\circ} 17'$ and 35° N. latitude, and $84^{\circ} 58'$ and $88^{\circ} 26'$ longitude W. from Greenwich; and is bounded N. by Tennessee, E. by Georgia, S. by Florida and the Mexican gulf, and W. by Mississippi. Its superficial area is 50,722 square miles.

Physical Aspect.—

The face of Alabama is somewhat varied. Near the gulf of Mexico the country is low and level, embracing numerous swamps and savannas. A large portion of the upland, toward the centre, consists of pine-barrens, thinly wooded, or covered with coarse grass. The soil here is generally sandy and thin. The central part of the state consists of a table-land, with a deep, rich, productive soil. Toward the north, the surface becomes mountainous and hilly, beyond which lies the valley of the Tennessee, where the soil is highly fertile.

Mountains.—The Cumberland or Appalachian range extends into this state from the northeast, and is believed to abound in mineral wealth.

Rivers and Bays.—The principal rivers are, the Alabama, Tombigbee, Black Warrior, Coosa, Tallapoosa, Tennessee, Chattahoochee, Perdido, Cahawba, and the Mobile. The chief bays are, Mobile, and Bon Secour, which are situated in the southwest part of the state.

Islands.—At the mouth of Mobile bay is a chain of low islands, the three principal of which are, Dauphine, Hurricane, and Horn.

Climate.—The climate of the uplands is generally salubrious, with mild winters, and pleasant summers; but in the southern parts, and along the borders of the streams, it is unhealthy. The extremes of the seasons greatly vary. Those portions of the state lying along the gulf may be regarded as sub-tropical, while those situated in the more elevated and northerly parts, are more or less subject to excessive frosts, and abiding snows. Although the navigation of the rivers is sometimes impeded by ice, it is more frequently the case that it is suspended by excessive droughts.

Productive Resources.—No part of this state will admit of the profitable cultivation of the sugar-cane, unless we except a narrow strip along its extreme border on the southwest. The staple products are cotton, rice, tobacco, wheat, oats, potatoes, and Indian corn. Indigo was formerly ranked among the staple crops, but its cultivation has long since ceased. The farms under cultivation, in 1850, were 41,964. Mines of gold, silver, and iron, are successfully worked in the county of Randolph. Gold also occurs in Tallapoosa, Coosa, Talladega, and Chambers. Silver is found in Tallapoosa; iron in Benton, Clarke, and Talladega; nitre in Blount; and lead in the bed of the Tennessee, on Muscle shoal. Coal abounds in Tuscaloosa, and on the Cahawba, and Black Warrior; marble, granite, limestone, &c., in Clarke, which also produces salt.

Manufactures.—There are upward of 1,000 manufacturing establishments in this state, producing \$500 and more each annually. There are several cotton factories established, though they produce only the more common fabrics required for domestic use. Tanneries, flouring, and saw mills, are numerous; and the products of individual industry in the mechanic arts are considerable.

Railroads and Canals.—There are as yet but about 150 miles of railroad completed in Alabama. But new lines are projected, and some of them will be carried through at an early day. The principal canals are, the Muscle Shoal canal, thirty six miles long, and the Huntsville canal, sixteen miles.

Commerce.—The foreign trade of Alabama (mostly exports of domestic produce) amounts to about \$12,000,000 annually. The shipping engaged in the foreign trade is about 100,000 tons, and about as much more in the coasting-trade, principally with the northern Atlantic ports.

Education.—Of the educational institutions in Alabama, the university at Tuscaloosa, founded in 1828, is the principal; besides this are, La Grange college, founded in 1831; Spring-Hill college, founded in 1830;

and Howard college, at Marion, founded in 1841. A law-school is attached to the university, and theological seminaries to Spring-Hill and Howard colleges. There are in the state about 200 academies and grammar-schools, and about 1,000 primary and common schools.

Population.—In 1800, estimated at 2,000; in 1810, at 20,845; in 1820, it was 127,901; in 1830, 309,527; in 1840, 590,756; in 1850, 771,672. Number of slaves in 1820, 41,879; in 1830, 117,549; in 1840, 253,532; in 1850, 342,892.

Government.—The legislative power is vested in two branches, a senate, and house of representatives. The house of representatives consists of 100 members, elected for two years; the senate consists of 33 members, elected for four years, one half retiring every two years. The executive power is vested in a governor, who is elected by the people for two years; and is eligible four years out of six. State election first Monday in August. The legislature meets biennially at Montgomery. The judicial power is vested in a supreme court, of three justices; in a court of chancery, of three chancellors, the state being divided into three chancery districts; in circuit courts, each held by one judge, the state being divided into eight circuits, and such inferior courts as the legislature may establish. The judges of the supreme and circuit courts, and the chancellors, are elected by a joint vote of the two houses of the general assembly, for six years. The right of suffrage is possessed by every white male citizen, of twenty-one years of age, who has resided within the state one year preceding an election, and the last three months within the district in which he offers his vote.

History.—The territory of Alabama was formerly held by France, as a part of Louisiana, its first permanent settlement by Europeans having been established by D'Iberville, in 1702, on Mobile bay. Subsequently, four degrees of latitude, of its most northerly part, fell into the possession of the English, and was embraced within the grant to the Georgia colony, in 1732. After the treaty of Paris, in 1763, when Florida was ceded to Great Britain, and the French restricted to the western side of the Mississippi, the southern part of the present state of Alabama was attached to the western division of Florida, the northern division being claimed by Georgia, as a part of the original grant, which embraced the region between the rivers Savannah and Altamaha, extending from their head waters westward to the "South sea." In 1781, Governor Galvez, of Louisiana, invaded and conquered West Florida, which, together with a part of East Florida, then held by the British, once more fell into the hands of Spain, in 1783, who held it until 1798, at which time, all that portion of Georgia south of the Altamaha was ceded to the United States. By act of Congress, subsequent to the adjustment of the boundary between Louisiana and Florida, and our then newly-acquired territory, north of the thirty-first degree of latitude, provision was made for a territorial government, in what is now comprised Mississippi and Alabama, called the "Mississippi Territory." In 1802, cession was made, by Georgia, to the United States, of all her territory on the west, between Chattahoochee and Mississippi rivers, as far up the former as near the thirty-third parallel of latitude, and then to latitude thirty-five degrees by the existing line between Georgia and Alabama. In this condition the Mississippi territory remained until 1817, when it was organized by act of Congress into two states, Mississippi and Alabama. In 1819, the inhabitants of the latter formed its constitution, and in 1820 it was admitted into the Union as an independent state.

ALABAMA, p. t., Genesee co., N. Y., 263 ms. W. by N. of Albany; from W. 388 ms. Watered by Tonawanda creek. Pop. 2,054.

ALACHUA COUNTY, in the northern part of Florida, situated along the east margin of Suwannee river. Although its surface is generally flat and marshy toward the gulf, this county in other parts is undulating, and contains much good land. It is drained by Wakassee and Withlacoochee rivers, and contains 2,500 square miles. Courts are held at Newmansville. Pop. in 1840, 2,282; in 1850, 2,524.

ALBANY COUNTY, New York, on the west side of Hudson river, and bounded by the Mohawk on the northeast. Its length is about 22 miles, and its breadth 21 miles, containing about 462 square miles. The face of the country is generally hilly, the soil sandy and light, though much of it well cultivated and fertile, particularly along the Hudson. Courts are held at Albany, the capital of the state. Pop. in 1820, 38,116; in 1830, 53,560; in 1840, 68,593; in 1850, 93,279.

ALBANY, city, capital of the state of New York, and seat of justice of Albany county, situated on the west side of Hudson river, 145 ms. N. of New York, and 164 ms. W. of Boston. Rising by a bold ascent from the water, and crowned with the glittering domes of the capitol and city-hall, it presents an interesting appearance from the river, and creates anticipations which are rarely realized on entering its streets; many of these retain their early irregularity and narrowness, but the more modern avenues and buildings are generally spacious and elegant. The capitol, at the head of State street, a broad avenue, ascending steeply from the river, stands on the east side of a beautiful public square. In the north part of this square, which is divided by a street running from east to west, stands the city-hall and the state-hall, both of white marble, the former adorned with a beautiful gilded dome. The other public buildings are: churches, over thirty in number, the Albany academy, and the Female academy. Few inland cities combine so many natural advantages for trade, improved by such extensive and costly public works, as Albany. It is the terminus of the Erie canal, and the great chain of railroads which connects the central counties of New York, the great lakes, and their vast shores. The Green Mountain state sends its productions to Albany through Lake Champlain and the Champlain canal. Some of the products brought through these channels, pass through Massachusetts to Boston by railroad; more are whirled in a few hours to New York, by the gigantic Hudson River railroad, which now sweeps majestically through the solid mountains and rocky headlands which skirt that mighty stream. Steamboats, schooners, and sloops, also convey large cargoes to and from the towns along the route. Pop. in 1790, 3,498; in 1800, 5,349; in 1810, 9,356; in 1820, 12,630; in 1830, 24,238; in 1840, 33,721; in 1850, 50,763.

ALBEMARLE COUNTY, in the central part of Virginia, situated on the northerly side of James river. Length, about 35 ms.; mean width about 20, with an area of 700 square miles. The chief part of this county is drained by the tributaries of Rivanna and Hardware rivers, the general surface sloping toward James river; and the face of the country is beautifully diversified by mountain, hill, and dale, the Blue Ridge forming the northwestern border. The soil, of course, varies from productive river alluvion to the most mountainous and sterile. The productive, however, predominates.

Courts are held at Charlottesville. Pop. in 1820, 19,750; in 1830, 22,618; in 1840, 22,924; in 1850, 25,800.

ALLEGAN, c. h., p. t., seat of justice of Allegan co., Mich., 161 ms. W. by N. of Detroit; from W. 626 ms. Watered by Kalamazoo river. Pop. 752.

ALLEGHANY COUNTY, situated in the southwestern part of New York. Length, 40 miles; mean breadth, 28, with an area of 1,120 square miles. It is traversed by Alleghany river, along the borders of which there are considerable tracts of alluvion. The surface of the residue of this county is diversified by hill and dale, and is generally well adapted for grazing. Courts are held at Angelica. Pop. in 1820, 9,330; in 1830, 26,218; in 1840, 40,975; in 1850, 37,812.

ALLEGHANY COUNTY, in the southwestern part of Pennsylvania. Watered by Alleghany, Youghiogheny, Monongahela, and Ohio rivers. Length of this county, 32 miles; mean breadth, 18, with an area of 575 square miles. The face of the country is peculiarly diversified by depressed vales, lying within large swelling hills, which are productive to their summits. In the bosom of these hills there exist inexhaustible beds of fine bituminous coal. Excellent lime and building stone also abounds. Courts are held at Pittsburgh. Pop. in 1820,

34,921; in 1830, 50,552; in 1840, 81,235; in 1850, 138,300.

ALLEGHANY COUNTY, in the central part of Virginia, and drained by branches of James river. Length, 28 miles; mean breadth, 18, with an area of about 500 square miles. This county occupies a high mountain valley, exceeding in some places 1,000 feet above the level of the sea. Consequently, the climate is influenced by mountain exposure and increased elevation. Much of the soil is fertile, particularly along the streams, while in other parts it is barren. Courts are held at Covington. Pop. in 1830, 2,816; in 1840, 2,740; in 1850, 3,515.

ALLEGHANY COUNTY, in the extreme western part of Maryland, bordering on the north side of Potomac river. Entire length, 65 miles; breadth very unequal, averaging about 12½, with an area of about 800 square miles. This county is traversed by the main chain of the Alleghany mountains, which discharge the upper branches of the Youghiogheny into the Potomac. The face of the country is excessively broken and rocky, notwithstanding there is much excellent arable land in the valleys, and some even on the mountain plains. The mountains contain extensive beds of bituminous coal, that of Frostburgh being of superior quality. Courts are held at Cumberland. Pop. in 1820, 8,654; in 1830, 10,609; in 1840, 15,686; in 1850, 22,769.

ALLEGHANY, city, Ross township, Alleghany co., Pa., 200 ms. W. N. W. of Harrisburgh; from W. 226 m. Watered by the Alleghany river. Pop. in 1840, 10,069; in 1850, 21,262.

ANNAPOLIS JUNCTION, p. o., Anne Arundel co., Md.

ANNAPOLIS, CITY, capital of Maryland, and seat of justice of Anne Arundel county, is situated on the southwest bank of Severn river, three miles from its entrance into Chesapeake bay, 20 miles southeast of Baltimore, and 40 miles from Washington. Though located favorably enough for commerce, on a good harbor, the tide of trade and prosperity is drawn too strongly toward Baltimore to allow it to flourish as vigorously as it otherwise might. The site and plan of the city are pleasant and agreeable. The statehouse is venerable and interesting from its Revolutionary associations. Here, in 1783, Washington resigned his commission to the continental congress, one month after the departure of the enemy from the American shores. The walls of the senate-chamber are honored with the portraits of Carroll, Chase, Paca, and Stone, signers of the Declaration of Independence, and of other distinguished contemporaries. In the hall of the house of delegates, is a picture of the surrender of Cornwallis at Yorktown. Aside from these attractions, the capitol is beautiful for its situation and architecture, as well as for the magnificent prospect viewed from its dome. Besides several churches, banks, &c., Annapolis contains St. John's college.

The population, in 1810, was about 2,000; in 1820, 2,260; in 1830, 2,623; in 1840, 2,792; in 1850, 3,011.

ANN ARBOR, c. h., p. v., seat of justice of Washtenaw co., Mich., 42 ms. w. of Detroit; from W. 535 ms. Watered by Huron river. Pop. 4,868.

ANNE ARUNDEL COUNTY, situated on the westerly side of Patuxent river and Chesapeake bay, in Maryland, with Patuxent river on the west. Length, 60 miles; mean breadth, 12, extending over an area of 720 square miles. The face of the country, in general, is agreeably undulating, with a varied soil, mostly of a secondary quality. Courts are held at the city of Annapolis. Pop., in 1830, 28,295; in 1840, 29,532; in 1850, 32,393.

ARKANSAS COUNTY, situated in the southeast part of the state of Arkansas, and watered by Arkansas, White, and Bosuf rivers, and Bayou Barthelany. The face of the country is generally level, except the westerly part which rises into eminences. Length, 60 miles; mean width, 40, extending over an area of 2,400 square miles. Courts are held at Arkansas. Pop., in 1830, 1,426; in 1840, 1,346; in 1850, 3,246.

ARKANSAS, t., Arkansas co., Ark. Pop. 584.

ARKANSAS POST, c. h., p. v., seat of justice of Arkan-

sas co., Ark. 117 ms. s. e. of Little Rock; from W. 1,067 ms. Watered by Arkansas river.

ARKANSAS, one of the United States, lies between 33° and 36° 30' north lat., and 89° 30' and 94° 30' west long. from Greenwich; and is bounded north and northeast by Missouri, east by Mississippi river, which separates it from Mississippi and Tennessee, south by Louisiana, southwest by Texas, and west by the In-

dian territory. Its superficial area is 52,198 square miles.

Physical Aspect.—In the eastern part of the state, say a distance of 100 miles from the Mississippi, the country is low and wet, and much of the land, except along the borders of the streams, is subject to inundation. With the exception of some prairie, the eastern portion is covered with dense forests. The soil here, where arable, is of the most productive kind. In the middle of the state, the surface is uneven and broken, and in the western parts it is mountainous and hilly, interspersed by timber lands, prairies, and barren plains. In some respects, Arkansas may be regarded as a barren country, although along the margins of the streams the soil is generally fertile, but remote from these it is sterile and poor.

Mountains.—The chief mountains in this state are the Ozark, which lie at its northwest corner, rising to a height of some 2,000 feet. A range of hills, called the Black mountains, runs between the Arkansas and White rivers, extending from the latter to the western border of the state.

Rivers and Springs.—The principal rivers that traverse this state, are the Arkansas, Wachita, White, and St. Francis. The Mississippi waters its almost entire boundary on the east. Toward the source of the Wachita, there are hot springs, which are much resorted to by invalids. Their waters are pure and limpid, possessing little or no mineral properties, and, though varying considerably in the range of their temperature, sometimes rise nearly to the boiling point.

Climate.—The climate of the easterly part, particularly on the borders of the rivers, is generally moist and unhealthy; but in the middle and westerly portions it is regarded by the settlers as salubrious. The climate of the southerly part, resembles that of Louisiana, while that at the north is similar to Missouri.

Productive Resources.—The staple products are, cotton, wool, lumber, peltry, wheat, oats, potatoes, tobacco, Indian corn, cattle, horses, and mules. The southern portion of the state is well adapted to the cultivation of cotton. Its mineral productions consists of iron ore, lead, gypsum, salt, and coal.

Manufactures.—The manufactures of Arkansas are confined principally to supplying the immediate wants of the people. The number of manufacturing establishments in the state, in 1850, producing \$500 and upward each annually, was 271.

Commerce.—Arkansas has no direct foreign commerce, its staples being shipped principally at New Orleans; but its river trade is considerable.

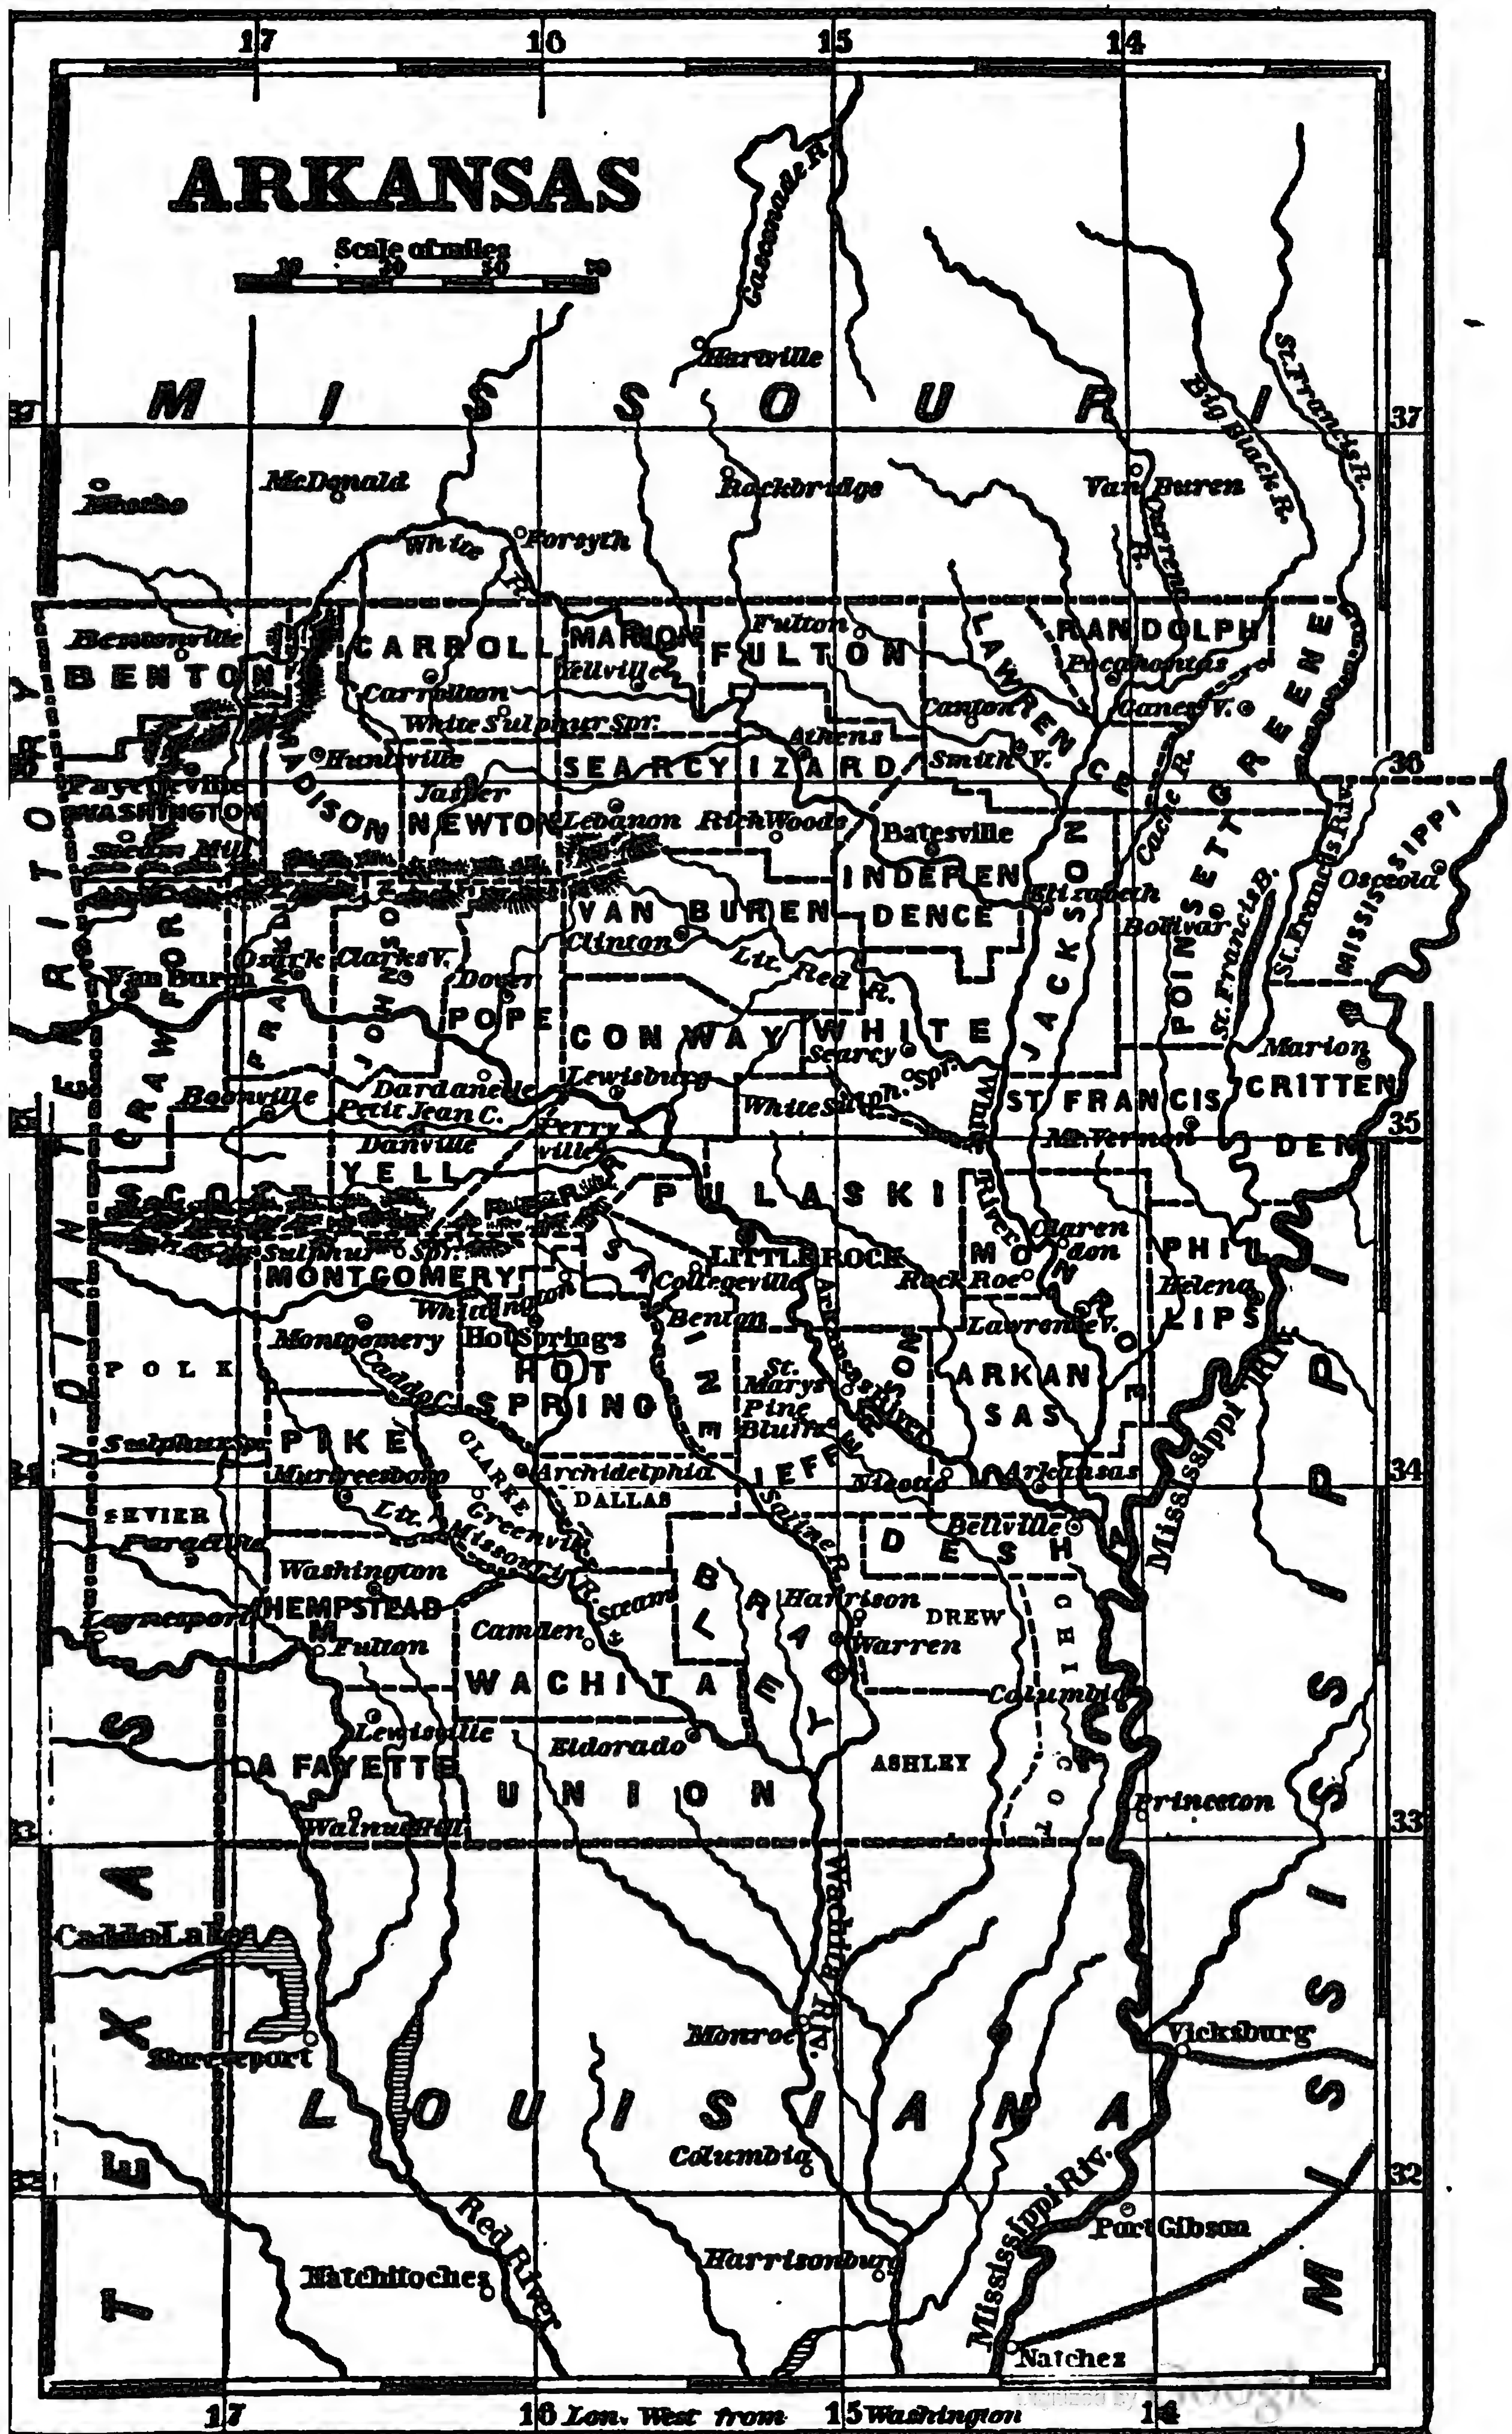

Education.—There is no collegiate institution in Arkansas. It has about 15 academies and 200 common schools.

Population.—In 1820, 14,273; in 1830, 30,388; in 1840, 97,574; in 1850, 209,639. Number of slaves, in 1820, 1,617; in 1830, 4,576; in 1840, 19,935; in 1850, 46,982.

Government.—The legislative power is vested in a general assembly, consisting of a senate and house of representatives. The senators are elected by the people, by districts, for the term of four years; the representatives, by counties, for two years. The senate consists of not less than 17, nor more than 33 members; the house of representatives of not less than 54, nor more than 100 members. The general elections are holden every two years, on the first Monday in October, and the legislature meets biennially, on the first Monday in November, at Little Rock. The executive power is vested in a governor, elected by the people once in four years; but he is not eligible for more than eight years.

In any term of twelve years. The judicial power is vested in a supreme court, of three justices, in circuit courts, in county courts, and justices of the peace. The judges of the supreme and circuit courts are chosen by the general assembly, of the former for eight, of the latter for four years. Justices of the peace are elected by the people for two years. Judges of the county courts are chosen by the justices of the peace. Every white male citizen of the United States (excepting soldiers and seamen of the army and navy), a resident of the state six months, is entitled to vote at elections.

History.—Arkansas was originally a part of the province of Louisiana, and constituted a portion of that undefined region lying west of the Mississippi, which received not the tread of the white man until the present century, unless visited by De Soto, who explored the valley of the Mississippi in 1541. In the arrangement of territories it was separated from Louisiana and attached to Missouri. It remained in this connection till 1819, when it was erected into a distinct territory, under its present name. The Rocky mountains were its western limits; but by congressional acts in 1824, and by subsequent treaties with the Cherokee Indians, its area was curtailed. In 1836, a convention of the representatives of the people assembled at Little Rock, and adopted a state constitution; and the same year Arkansas was admitted into the Union as an independent state.

AUGUSTA COUNTY, situated in the central part of Virginia, and drained by the tributaries of James and Shenandoah rivers. Superficial extent, 30 miles square, or 900 square miles. The face of the country undulating and somewhat hilly; the soil varied, but generally productive. Courts are held at Staunton. Pop. in 1820, 16,742; in 1830, 19,926; in 1840, 19,628; in 1850, 24,610.

AUGUSTA, the capital of the state of Maine, and seat of justice of Kennebec county, is situated on both sides of Kennebec river, at the head of sloop navigation, 42 miles from the ocean, 163 northeast of Boston, and 595 miles from Washington. In 1831 the seat of government was removed from Portland to this place. The statehouse is situated a little south of the town, on the west side of the river, and is constructed of granite, after the plan of the Massachusetts statehouse, in Boston. Length of the central part, 84 feet; depth, 56 feet, with a wing on each side 34 by 54 feet. It is entered by a Doric portico of eight granite columns, 21 feet high. The central part of the building is surmounted by a handsome cupola and dome, and the whole is embosomed in a spacious park of ornamental trees. An elegant and costly stone bridge of two arches, each of 180 feet span, connects the two parts of the village. Among other public structures are the United States arsenal, which is on the east side of the river, the state lunatic asylum, and the Augusta high school. The growth of the place has been rapid since it became the capital of the state. Pop. in 1810, 1,805; in 1820, 2,475; in 1830, 3,800; in 1840, 5,314; in 1850, 8,255.

AUGUSTA, c. h., p. v., seat of justice of Bracken co., Ky., 73 ms. N. E. of Frankfort; from W. 487 ms.

AUGUSTA CITY, seat of justice of Richmond co., Ga., is situated on the west side of the Savannah river, 98 miles east-northeast of Milledgeville, and 125 from Savannah. The streets cross each other at right angles, and are lined with beautiful shade-trees, giving the city a fine appearance. The public and many of the private buildings are costly and elegant. It is connected with Charleston, Savannah, and the interior of the states of Georgia, Alabama, and Tennessee, by railroads, and is a place of much commercial enterprise. Pop. in 1830 was 4,634; in 1840, 6,436; in 1850, —.

AUSTIN COUNTY, situated in the southern part of Texas, and traversed by Brazos river. Area, — square miles. Courts are held at —. Pop. in 1850, 3,841.

AUSTIN, the capital of Texas, and seat of justice of Travis county, is situated on the northeasterly side of Colorado river, 200 miles northwest of Galveston.

The site is salubrious, being removed from the unhealthy atmosphere of the seaboard. The city is laid out on an extensive scale, with regular streets and avenues, which, when lined with the contemplated rows of buildings, will present an imposing spectacle. At present the buildings are not remarkable for elegance or number. In 1845 a convention met at this place, and organized a state government and constitution, which were ratified by the popular vote in the same year. In 1846 the first state legislature met at Austin, where it has since held biennial sessions. The population in 1840 was about 400; in 1850, 4,346.

BALTIMORE COUNTY, situated in the northerly part of Maryland, on the north side of Patapsco river, and the westerly side of Chesapeake bay. Length, about 30 miles; mean breadth, 25, with an area of 750 square miles. The face of the country is agreeably diversified by hill and dale, abundantly wooded and watered, and generally well cultivated, the soil being good for grazing, orchards, and the production of grain. Courts are held at Baltimore. Pop., in 1820, exclusive of that of the city and its precincts, 33,358; in 1830, including that of Baltimore, 120,870; in 1840, 134,379; in 1850, 203,928.

BALTIMORE, the principal city of the state, and the third city of the United States in population, is situated on the north side of Patapsco river, 14 miles from its entrance into Chesapeake bay, 100 miles southwest of Philadelphia, and 40 miles from Washington. It is built on uneven ground, bending around the innermost of three harbors, which successively diminish in space and depth. The outer one is 22 feet deep, one mile and a quarter long, from its entrance into the second, which is fifteen feet deep, half a mile wide, and one mile long. Vessels of about 600 tons enter this harbor, while the third, which enters the city, is deep enough for vessels of 200 tons. The outer entrance is defended by fortifications, which repulsed a British fleet of sixteen ships in 1814.

The appearance of the city, when viewed from the water, is imposing. The most conspicuous and fashionable part is built on a bold, but not steep elevation; and the steeples, monuments, and domes with which it is crowned, greatly relieve and beautify the scene. Within the town the streets and buildings exhibit various degrees of beauty and regularity when viewed from different points. In the construction of the houses, convenience and solidity appear to have been studied, rather than magnificence; but the abodes of wealthy citizens exhibit the same elegance here as in other great cities of the Union. Many of the public structures are also splendid and costly. Baltimore has been named the "Monumental city," chiefly from the two great monuments it contains. Washington monument is a Doric column, of white marble, 180 feet high, resting on a base of the same material, 20 feet high, and surmounted by a statue of the man it commemorates. Ascending by a winding staircase within the column, the visiter beholds a wide prospect of the city and its varied environs. Battle monument, also of white marble, is 52 feet high, and was erected in memory of the patriots who fell in defence of this city against the British, in 1814. Many of the churches are remarkable for architectural beauty. The courthouse, state penitentiary, customhouse, St. Mary's college, and the halls of numerous literary and scientific institutions, are among the other important public buildings. The exchange is 225 feet wide, 141 feet deep, and 115 feet to the top of the dome. Colonnades of the Ionic order, made of Italian marble, extend across its east and west fronts. Water is supplied in abundance from fountains in the city, and from Jones's fall, in the vicinity, by an aqueduct and pipes. In manufactures, as in commerce, Baltimore ranks with the great cities of America. Jones's fall (a small creek dividing the city, and spanned by several beautiful bridges) and the Patapsco afford numerous excellent seats for mills and manufactories of various kinds. The population in 1775 was 5,936; in 1790, 13,503; in 1800, 26,614; in 1810, 46,555; in 1820,

BANGOR CITY, the seat of justice of Penobscot co., Me., situated on the west side of Penobscot river, at the head of tidewater, 58 miles from the Atlantic, 68 northeast from Augusta, 230 northeast of Boston. Vast quantities of lumber are annually floated down the river to this place, whence it is shipped to the West Indies and various parts of the Union. This city is built on elevated ground, affording a fine view of the surrounding country, and is tastefully laid out, and adorned with trees. The public as well as the private buildings are, many of them, neat and elegant. The harbor is inaccessible for four months in the winter, but will admit, at other times, vessels of 300 or 400 tons, the tide alone rising to the height of 17 feet. Lines of steamboats connect the city with Portland, and a railroad extends 12 miles up the river to Oldtown. The Bangor Theological seminary was incorporated in 1834, and is in prosperous condition. Population in 1790, 169; in 1800, 277; in 1810, 850; in 1820, 1,221; in 1830, 2,867; in 1840, 8,627; in 1850, 14,432.

BATON ROUGE, p. o., Chester district, S. C., 67 ms. N. of Columbia; from W. 462 ms.

BATON ROUGE, seat of justice of East Baton Rouge parish, and capital of La. It occupies a pleasant slope on the east bank of the Mississippi river, 117 miles N. W. of New Orleans, and 1,237 miles from Washington. Upon the elevation east of the city stand the United States barracks; it also contains Baton Rouge college, and other prominent public buildings. This place is

not otherwise particularly remarkable, except in being the seat of the state government, having succeeded New Orleans in that relation in December, 1849. Opposite is the village of West Baton Rouge. The town is pleasantly located, with good facilities for business, being nearly equally distant from Natchez and from New Orleans, from which places, and other points on the Mississippi, come steamboats to its wharves. The population in 1830 was about 1,000; in 1840, 2,269; in 1850, 3,905.

BENNINGTON COUNTY, situated at the southwest corner of Vermont. Length, 40 miles; mean width, 17; with an area of 680 square miles. The face of the country is mountainous and hilly; the soil generally productive, and particularly suited for grazing and fruit. Seats of justice at Bennington and Manchester. Pop. in 1820, 16,125; in 1830, 17,470; in 1840, 16,872; in 1850, 18,589.
BENNINGTON, p. v., seat of justice, together with Manchester, of Bennington co., Vt., 130 ms. N. W. of Boston, 117 ms. S. of Montpelier, and 407 ms. from W. It was named from Benning Wentworth, who, in 1749, was the royal governor of New Hampshire. It is drained by branches of Hoosick river, which afford good water-power. Marble, iron ore, and yellow ochre, are found here. The principal village is on elevated ground, and makes a good appearance. A little to the east is a considerable manufacturing village. In 1777, General Stark, with 800 Americans, defeated a superior British force, on the west border of this town. Pop. in 1850, 3,921.

BENNINGTON, p. t., Wyoming co., N. Y., 264 ms. w. of Albany; from W. 370 ms. Watered by Cayuga and Tonawanda creeks. Pop. 2,406.

BOSTWICK'S MILLS, p. o., Richmond co., N. C., 122 s. w. by w. of Raleigh; from W. 396 ma.

BOSTON CITY, the capital of Massachusetts, and seat of justice of Suffolk co., occupies a peninsula and other adjacent points, at the head of Massachusetts bay. The original town was confined to the peninsula, but this, although enlarged by artificial means, has long since proved too narrow for the growing city, which, passing the barriers thrown around it by nature, now embraces, independently of the populous towns and villages that are its offspring, the triple division of "Old Boston," "South Boston," and "East Boston." The "Neck" was formerly the only avenue from the town to the main land, but it is now united by bridges, and other avenues, to Charlestown, Cambridge, South Boston, and other surrounding points. From the west side of the city, Western avenue is continued to Brookline, on the opposite side of Charles river bay, by a costly dam one mile and a half in length, and 100 feet broad. Proceeding from the middle of this, on which are several tide-mills, a second dam divides the bay into two spacious basins. Several of the Boston railroads also enter the city, by bridges built expressly for that purpose.

The harbor extends from Nantasket to the city, and spreads from Chelsea and Nahant to Hingham, containing about seventy-five square miles. It is studded with upward of fifty islands, or rocks, and receives the waters from the Mystic, Charles, Neponset, and Manatticut rivers, with several other smaller streams. One of the most remarkable features connected with the harbor, is the costly and splendid wharves. These marks of commercial enterprise and prosperity are about one hundred in number, and of various dimensions. Long wharf is 1,800 feet long, and 200 feet wide; Central wharf, 1,397 feet long, and 150 feet wide; India wharf, 980 feet long, and from 246 to 280 feet wide; and Commercial wharf is 1,100 feet long, and 160 feet wide. These, like most of the others, are lined with extensive and magnificent warehouses, constructed of the most substantial materials.

Another valuable acquisition is Boston Common, a pleasant park of about fifty acres, situated at the south-westerly slope of Beacon hill. It is pleasantly diversified with knolls, avenues, fountains, a small lake, or pond, and trees, some of the latter being interesting relics of colonial and revolutionary times. The common is surrounded by an iron fence, over one mile in extent. Between the common and Charles river bay, lies the Botanic Garden, a beautiful and tasteful enclosure. On the north side of the common, and at the summit of the hill, stands the statehouse, an elegant structure, 173 feet in length, 61 feet in depth, and 120 feet in height. The top of the dome is 230 feet above tide-water. The view from the top of the statehouse is very extensive and variegated; perhaps nothing in the country is superior to it. To the east appears the bay and harbor, interspersed with beautiful islands; and in the distance beyond, the wide ocean. To the north the eye is met by Charlestown, with its interesting and memorable heights, of Bunker Hill, crowned with the monument, 220 feet in height, and the navy-yard of the United States; the towns of Chelsea, Malden, and Medford, and other villages, and the natural forests mingling in the distant horizon. To the west, is a fine view of the Charles river and bay, the city of Cambridge, rendered venerable for the university, now about two hundred years old; of the highly-cultivated towns of Brighton, Brookline, and Newton; and to the south is the city of Roxbury, which seems to be only a con-

tinuation of Boston, and which is rapidly increasing. Dorchester, a rich, agricultural town, with Milton and Quincy beyond; and farther south, the Blue hills, at the distance of eight miles, which seem to bound the prospect.

Faneuil Hall, which is justly styled the "cradle of American liberty," was originally built in 1740, for a town-hall and market-house. It has been enlarged and beautified on several occasions, and will always be a place of historical interest to the lovers of liberty. Adjoining it on the east is Quincy Market, one of the most splendid and commodious edifices of the kind in the country. It is constructed of granite, or sienite, 540 feet in length, 50 feet wide, and two stories high. The courthouse, merchants' exchange, postoffice, custom-house, Massachusetts general hospital, the old south meetinghouse, Park-street, Brattle-street, and Trinity churches, the Tremont house, Revere house, the Athæneum, the jail, Society of Natural History, the houses of industry, correction, and reformation, are among other objects of interest. The water-works may be regarded as one of the most important of the recent improvements. By a series of pipes and reservoirs, water is conveyed to all parts of the city proper, and East and South Boston, from Long Pond, or Lake Cochituate, a distance of nearly 20 miles. It will supply 10,000,000 gallons of water daily, and cost about \$5,000,000.

Railroads diverge from this city in various directions, connecting it with Plymouth, New Bedford, Fall River, Providence, Stonington, New York (via Worcester, Springfield, Hartford, New-Haven); with Albany, via Worcester and Springfield; with Vermont, via Fitchburgh; also, with Lake Winnipisiogee and the White Mountains, in New Hampshire, via Nashua, Concord, and Meredith Bridge; also, via Haverhill, Exeter, and Dover; with Lawrence, via Lowell and Manchester; with Augusta, Me., via Salem, Newburyport, Portsmouth, Portland, and Bath.

Boston is pre-eminently distinguished for its efforts in behalf of education. Its public schools are unrivalled in excellence, and it numbers among its citizens some of the most munificent patrons of learning, literature, and science; which, with its many eminent literary and philosophical societies, has led to its being honored with the title of the "Athens of America."

Mount Auburn, a beautiful cemetery, belonging principally to Boston, is picturesquely situated near Cambridge, about five miles distance. Within this interesting "city of the dead" rest the remains of many of the illustrious sons of New England.

The population of Boston in 1700, was 7,000; in 1722, 10,567; in 1765, 15,520; in 1790, 18,033; in 1800, 24,937; in 1810, 33,250; in 1820, 43,296; in 1830, 61,392; in 1840, 93,383; in 1850, 136,657.

BRIDGEPORT CITY, Fairfield co., Ct., 75 ms. s. W. of Hartford; 17 ms. from New Haven; 62 ms. N. E. of New York; from W. 270 ms. Watered by Pequinnock river, and Long Island sound. The city is built on a plain, which, as it retreats from the water, rises into an elevation that affords a fine prospect of the surrounding country, and thence spreads away into undulations and hills. It is well laid out with handsome houses. In the

last few years especially, a large number of substantial brick stores and dwellings, have added much to the appearance and wealth of the place. The Housatonic railroad, traversing the valley of Housatonic river, meets the West Stockbridge railroad in Massachusetts, which is the connecting link between Albany and Boston. Several vessels sail from this port, and it would probably carry on a more extensive foreign commerce, if the harbor was not obstructed by a sand-bar, 13 feet below high-water mark. A bridge 1,236 feet long extends across the harbor, admitting vessels through a draw. The population in 1810, was 572; in 1820, —; in 1830, 2,803; in 1840, 4,570; in 1850, 7,560.

BROOKLYN, city, seat of justice of King's co., N. Y., the second in population in the state, is situated at the west end of Long Island, on the easterly side of East river, opposite the city of New York. Its surface was originally rough and broken, but has since been graded sufficiently low to be passed with ease. From the top of the "Heights," the city spreads over a gentle, or undulating slope, for several miles, toward Gowanus bay on the south and Williamsburgh on the northeast. It is destined, like each in the constellation of cities which cluster around New York, to attain inconceivable greatness. Its ample limits, and fine situation close to the business part of the great commercial emporium, with which it is connected by six steam-ferries—two of them, the Fulton and the South ferry, probably unsurpassed for elegance and despatch by any in the world—render it a favorite residence for merchants and others who do business in New York, and to these causes it is indebted for its rapid growth in population and wealth. Most of the streets are broad and pleasant, lined with handsome shade-trees, and substantial and often princely dwellings which are lighted in the night with gas. The new avenues toward the east part of the city, are arranged with great regularity and taste, with open, airy gardens attached to the dwellings. The city-hall, in a central situation, at the union of several of the principal streets, is a fine edifice of white marble. The United States Naval hospital, on a gentle swell near Wallabout bay, with its white marble walls through groups of trees, makes an agreeable picture. On this bay, at the north side of the city, appear also the large buildings of the navy-yard, which includes an area of 45 acres, en-

closed by a substantial brick wall. Here, too, is the U. S. dry-dock, a structure of almost unequalled vastness. The foundation is 406 feet long, and 120 feet wide. The main chamber is 286 feet long, and 30 feet wide at the bottom; at the top 307 feet long, and 98 feet wide. The iron folding-gates weigh 150 tons. Pumps discharge 40,000 gallons of water per minute. Ships-of-war of the largest class, here enter and are repaired. Sixteen years were occupied in the construction of this dock. The churches, which in proportion to the population of the place, are equalled in number and beauty by no other city, except, perhaps, by those of New York, are of all orders of architecture, from the chaste and simple Grecian, to the pure Gothic, with lofty walls, richly-sculptured columns, and tinted windows. The literary advantages of Brooklyn are also numerous and valuable. Libraries, lectures, scientific, and literary societies; and schools of various grades, are flourishing and well supported. The harbor of Brooklyn is deep, spacious, and sufficient for any number of vessels. Along the southwest front, opposite Governor's Island, extends the Atlantic dock, a deep and spacious basin, of 42 acres, which is surrounded by piers and bulkheads, containing a large number of substantial warehouses, built of stone. Other warehouses and factories of various kinds line the wharves along East river, from the Atlantic dock to Wallabout bay. A few miles south of the city, beyond Gowanus bay, lies the beautiful and enchanting Greenwood cemetery, which, for combination of romantic nature with splendid art, is probably surpassed by no necropolis in the world. The Long Island railroad terminates in Brooklyn, at the South ferry. The population in 1800, was 3,298; in 1810, 4,402; in 1820, 7,175; in 1830, 12,042; in 1840, 36,233; in 1850, 96,850.

BROOKLYN, c. h., p. t., seat of justice of Windham co., Ct., 44 ms. e. by n. of Hartford; from W. 371 ms. Watered by Quinnebaug and Blackwell's rivers. Pop. 1,514.

 BUFFALO, city, and seat of justice of Erie co., N. Y., is situated at the confluence of Buffalo creek with the east end of Lake Erie, and at the western terminus of the Erie canal, by which route it is 363 miles distant from Albany. It occupies a slope, chiefly on the north side of the creek, which is here deep enough for vessels drawing eight feet of water. The streets are generally regular, the buildings substantial, and many of them imposing. The longest and broadest is Main street, the Broadway of Buffalo, on each side of which, for more than two miles, extend lines of stores and other buildings. From the top of the elevation above the city, appears a wide panorama of the lake, Black Rock basin, Niagara river, the Erie canal, and the surrounding country.
 Buffalo is the offspring of the Erie canal, and ever since the completion of that stupendous work, has continued to increase in population, wealth, and importance. It is the gate through which the vast commerce of the great lakes and the western states passes on its way to New York and the east. A great chain of railroads binds Buffalo to New York, Boston, Albany, and the richest portion of the Empire state along the course of the Erie canal; and another, traversing the valleys of the Susquehanna and Delaware, links it with New Jersey, New York city, and Philadelphia. By either of

these routes, the passenger may reach Buffalo from New York, a distance of about 500 miles, in less than 20 hours. The Lake-shore railroad connects it with the vast network of railroads in the western states.
 The harbor of Buffalo was formerly impeded by sands which the winds and storms of Lake Erie deposited at its entrance. By the construction of a mole and pier, 1,500 feet long, this obstacle is removed, and vessels drawing eight feet of water, now enter the creek. Here, in the winter season, a large number of vessels, steamboats, ships, schooners, and canal-boats, are congregated and protected from ice and storms. Several hundred schooners, and a number of steamboats, navigate Lake Erie from Buffalo to the different ports on its shores. A large amount of capital is invested in manufactures.
 The population in 1810, was 1,508; in 1820, 2,095; in 1830, 8,653; in 1840, 18,213; in 1850, 42,261.
 BUFFALO, t., Armstrong co., Pa. Pop. 2,182.
 BUFFALO, p. t., Union co., Pa. Pop. 1,346.

BURLINGTON, v., Hampshire co., Va., 198 ms. N. W. of Richmond; from W. 126 ms.

BURLINGTON, p. t., seat of justice of Chittenden county, and the chief port of entry of Vermont. It is pleasantly situated on a beautiful bay of Champlain, and commands the principal trade of the county and of the lake. To this point flow a large portion of the products of the Green Mountain state, and thence they are conveyed by railroad, steamboats, or other vessels, to Troy, Albany, New York, St. John, and other places. Rising from the water by a gentle acclivity, and laid out in regular streets, adorned with gardens and dwellings, Burlington is as conspicuous for its pleasant and healthful location, as for its commercial advantages. The dome of the University of Vermont, which stands on an eminence 250 feet above the lake, commands a most varied, extensive, and delightful prospect. A light-house on Juniper island marks the entrance of the harbor, and a breakwater, erected by the general government, protects it from the west winds of the lake. This village communicates by railroad with Montpelier, Boston, and the intermediate places. Population, in 1810, 1,690; in 1820, —; in 1830, 3,525; in 1840, 4,271; in 1850, 5,211.

BURLINGTON, p. v., Carroll co., Ind., 53 ms. N. N. W. of Indianapolis; from W. 611 ms.

BURLINGTON, p. o., Racine co., Wis., 82 ms. S. E. of Madison; from W. 791 ms.

BURLINGTON, p. v., formerly the capital, and the largest town in Iowa, and the seat of justice of Des Moines county, occupies a pleasant slope on the west bank of the Mississippi, 75 miles southeast of Iowa city, 248 ms. N. of St. Louis, 1,429 ms. N. of New Orleans, and 271 ms. from W. Pleasant hills and woody slopes rise behind the city, and enhance the effect of its other advantages. It is the centre of an active, extended, and

increasing commerce with the rich interior of the state, together with that of Illinois, and the valley of the Mississippi. Possessing a combination of so many favorable circumstances, it has already received a vigorous impulse, and will undoubtedly advance with accelerated growth. Its broad and delightful streets, either along the water, or on higher ground, are admirably suited for business, as well as for residence, and the number of public buildings, elegant stores, and dwellings, is already large, and receives almost daily accessions. A steam-ferry connects the town with the opposite side of the river. Pop. in 1840, 1,300; in 1850, 4,081.

CALIFORNIA, one of the United States, lies between 42° and 32° 40' N. latitude, and 120° and 124° 30' longitude W. from Greenwich; and is bounded N. by Oregon, E. by Utah and New Mexico, from which it is separated in part by Rio Colorado, S. by Sonora and Lower California, in Mexico, and W. by the

Pacific. Its superficial area is 190,000 square miles.

Physical Aspect.—The general features of this state are mountainous and hilly, with the exception of the great valley of the Sacramento and San Joaquin, which covers an area of 500 miles in length, and 50 or 60 miles in width. Here the surface is level, and the soil fertile along the borders of the streams; but further back it is either arid and unproductive, or consists of extensive, low, alluvial marshes (*tulares*), thickly covered with rushes, which are traversed by numerous navigable creeks, or streams. This valley is bounded on the east by the Sierra Nevada, the most prominent range in the state, which run nearly parallel with the coast, at a distance of 100 to 200 miles. On the west of this valley lies another range of lesser mountains called the Coast range, some of them rising to the height of 3,000 feet, which also run parallel with the coast, at a distance of 30 to 60 miles. Among these hills are numerous valleys, some of which are highly fertile, and are surrounded by scenery of great beauty and picturesque effect. The soil which appears to be best adapted to the purposes of tillage, is that embraced within the above-named valleys, and those adjacent to Eel river, Humboldt harbor, and San Francisco bay.

Mountains.—The most prominent range of mountains in this state is the Sierra Nevada, along the western slope of which lie the far-famed gold regions, extending over an area 400 or 500 miles in length, and 30 to 60 in breadth. This slope is intersected by numerous gorges, or ravines, which afford egress to the tributaries of the Sacramento and San Joaquin, and presents to the landscape an aspect extremely picturesque, ragged, and rough. In the coast range the most prominent are Carnero, Diablo, and Santa Cruz mountains.

Rivers, Bays, Harbors, and Lakes.—The principal streams are, the Sacramento, San Joaquin, Klamath, Trinity, Feather, Yuba, Eel, Nappa, Calaveras, Salinas, Guadalupe, Tuolumne, Moquelumne, Pajaro, Merced, Mariposa, Stanislaus, Fall, and American rivers. The bays worthy of note are, San Francisco, San Pablo, and the Suisun, all entered through the Golden-Gate, which together form a harbor sufficient for the collected fleets of the whole world. They afford good anchorage, and are completely land-locked, and consequently are safe at all seasons. Humboldt and St. Diego harbors, and Trinidad bay, are well protected from the ocean winds, and afford a safe anchorage. The harbor of Monterey

is good, but is subject to the swell of the Pacific at all times. This country has some lakes, the most noted of which are, the Tulares, Owen's, Clear, and Rhett.

Climate.—The climate of California, with the exception of that in the valley of Sacramento, and San Joaquin, from June to October, may be regarded as salubrious. The dry season, in which little or no rain falls, lasts generally from April to November. The rainy months occur from November to May, during which period it is estimated that nearly one third of the days are stormy. In the region near the coast, snow rarely falls to remain in the valleys, but occasionally caps the mountains and larger hills; but further inland it is more frequent, and the Sierra Nevada is often capped with snow till snow falls again. The annual inundations of the valley of Sacramento and San Joaquin occur in the winter and spring, and the streams are frequently at great height in April and May, in consequence of the melting of the mountain snows. The temperature of the coast, particularly in the northwestern part of the state, is mild during the year; but the climate of the coast at the south is much warmer, and in summer it often is exceedingly hot. A few miles from the coast the breezes from the ocean become tempered to mildness, and the climate is pleasant and healthy. Still further inland, beyond the reach of the ocean breeze, particularly in the great valley, the summer temperature is often intensely hot. The nights, however, are usually cool. The winter temperature in the valley of Sacramento and San Joaquin, and on the coast, is usually remarkably mild, ice seldom forming over an eighth of an inch thick, and the morning frosts commonly disappear under the midday sun.

Productive Resources.—Although California is not generally adapted to the purposes of profitable agriculture, yet there is land enough of the finest quality to supply a large population with their ordinary vegetable wants. The valleys are exceedingly fertile, and will produce all of our common grain crops, without irrigation, with the exception of Indian corn. Most of the ordinary vegetables require irrigation, and when properly cultivated, their yield and size are truly enormous. The lands, however, in the vicinity of Humboldt harbor, are represented to be highly fertile, and in consequence of occasional showers, which occur in the course of the dry season, they need no artificial watering to produce the finest crops. The rich alluvial soil of the Tulares, if reclaimed by dikes, so as to afford the requisite inundation, doubtless would prove well adapted to the cultivation of rice. The vine flourishes in different parts of the state, and wine has long been made at Los Angeles, and in other places. Many of the recent settlers have commenced the cultivation of our northern fruits. In the southern counties the orange, castor-bean, and some other tropical productions, are cultivated with success. This country seems by nature to be peculiarly well adapted for grazing. The valleys, in spring and summer, are covered with luxuriant vegetation, consisting of various wild grasses, and the hills generally afford excellent pasturage during a large portion of the year, but less so than valleys, in consequence of droughts. The cattle of the country are generally owned by the native Californians, who often have herds of many thousands. These, though quite small, afford excellent flesh, and were formerly slaughtered in immense numbers for their tallow and hides, being the chief source of wealth of the inhabitants. This state is not well timbered, except on the mountains. On the range along the coast are extensive forests of cedar, which grow to an immense size, and furnishes a durable material for building. Toward the north and east, at the base of the Sierra Nevada, are immense forests of gigantic pines, cedars, firs, and other valuable timber trees, some of which are said to exceed 15 feet in diameter, and 200 feet in height. Omitting the lead, copper, and silver mines, which have been discovered, but not worked, in California, its gold, and cinabar, or quicksilver mines, may be said to constitute its principal resources. The latter, though not much worked as yet, are regarded by many as the most valuable mining property in the state. That at New Almaden, a few miles south of San José, is one of the richest veins in the world, yielding from 40 to 75 per cent, of pure quicksilver. It is the opinion of good judges that, if properly worked, this mine would yield full \$1,000,000 per annum. Although the existence of gold in this country had long been known, it never attracted general attention before 1848, when it was discovered near Sutter's Mill, on the south fork

of American river. Since that time it has been found on all of the principal eastern branches of the Sacramento and San Joaquin, as well as among the coast range on the tributaries of the Trinity and Klamath, in the northern part of the state. In the spring of 1850 a new impulse was given to the enterprise, from the discovery of numerous veins of auriferous quartz in Mariposa county, since which others, richly impregnated with the precious metal, have been successfully worked in various parts of the golden belt. The discovery of quartz veins in Mariposa, led to a more careful examination of other parts of the state, when gold-bearing quartz was found in almost every county along the foot hills of the Sierra Nevada, as far north as the northern branches of the Feather river; and the county of Nevada has probably more quartz mills now in operation than all the state besides; while El Dorado county has produced the richest quartz yet discovered, with perhaps the exception of the Carson creek vein. The product of the gold mines in 1852 is estimated at \$70,000,000. The gold is found under two general forms—interspersed in irregular veins of quartz in the mountain rocks, and in lumps and scales, of all sizes down to "golden pebbles," metallic gravel, and sand, mingled with the alluvion, or drift, which occurs in the bottoms of valleys and ravines, and in the beds of the streams. In general, the loose gold, or *placers*, is found at no great distance from the parent veins, from which it has been disintegrated, and washed down the slopes by mountain torrents or rills. The scale or lump gold is found in the greatest abundance in the bottoms of the "gulches," or ravines, and in the banks and beds of the streams, particularly in the bars of sand and gravel, formed by the eddies, or counter currents. Most of the gold hitherto dug has been taken from such localities, the river banks and beds yielding the most abundantly at the lowest stage of the water, which usually occurs during the first two months of fall. Sometimes the courses of the streams are diverted into new channels, by the erection of dams, in order to obtain the gold deposited in their beds. This is termed "wet digging," and can best be performed during summer and fall. The "gulches," or ravines, are usually free from water in the dry season, and hence the operations carried on in them, during spring and summer, are called "dry-diggings," which may be divided into three classes: 1st, the sand or earth in which the gold exists is collected in the dry ravines, or plains, and conveyed to some lake or stream, for washing; 2d, where lumps and scales are obtained, by means of shovels, picks, &c., from the sides of mountains, distant from water; 3d, the old Spanish method, by winnowing, from a large wooden bowl, the fine earthy particles, after the ore has been dried and pulverized, leaving the gold in the bottom. The modes of washing, or separating the gold from the earth, are various. The simplest method is the use of the wooden bowl. Some employ small wooden cradles, three or four feet long, with cleats, or rockers, on the bottom, and a riddle at one end; others are made of sheet iron, with rounded bottoms and wooden rockers. Some use the "Long Tom," a structure eight or ten feet long, while others use the "Virginia rocker," amalgamating the gold with quicksilver. A great variety of other apparatus and expensive machines have been invented for separating the gold, some of which answer an admirable purpose; but the "Burke" and the "Long Tom" are the general favorites, wherever an abundance of water is at command. In cases, however, where the gold occurs in fine particles, blended with black sand or alluvion, it can not be separated to advantage without the use of Mercury.

Railroads.—California has no railroad in operation as yet, though one has been projected from San José, the recent capital, to San Francisco.

Commerce.—San Francisco is the principal commercial port of California. Its commercial resources are at present based upon its metallic wealth. Gold supplies the medium of domestic exchange, and of foreign commerce. San Francisco, therefore, is a mart for the competing trade of the whole world. The number of arrivals and departures of vessels at this port are more numerous than those at any other port in the United States, New York alone excepted. There are now about twenty ocean-steamers traversing the Pacific and connecting with ports on the Atlantic, about sixty engaged in the river trade, and some four hundred other craft of various kinds navigating the rivers and bay. It has also considerable direct trade with the

South American states, China, and the East Indies.

Education.—The constitution of California makes the following provision for the support of common schools throughout the state: "The legislature shall encourage, by all suitable means, the promotion of intellectual, scientific, moral, and agricultural improvement. The proceeds of all land that may be granted by the United States to this state for the support of schools, which may be sold or disposed of, and the 500,000 acres of land granted to the new states, under an act of Congress distributing the proceeds of the public lands among the several states of the Union, approved A. D. 1841; and all estates of deceased persons who may have died without leaving a will, or heir, and also such per cent. as may be granted by Congress on the sale of lands in this state, shall be and remain a perpetual fund, the interest of which, together with all the rents of the unsold lands, and such other means as the legislature may provide, shall be inviolably appropriated to the support of common schools throughout the state. The legislature shall provide for a system of common schools, by which a school shall be kept up and supported in each district at least three months in every year." The legislature is also required to provide for the election of a superintendent of public instruction; and to take measures for the improvement and permanent security of any funds arising from the sale of lands, or from any other source, for the endowment and support of a university.

Population.—The population of Upper California, in 1802, was estimated at 17,000; in 1831, 23,025; and in the state of California, in 1851, estimated at 165,000.

Government.—The legislative power is vested in a senate and assembly. Senators not less in number than one third, nor more than one half the number of members of assembly, are elected by the people in districts, for a term of two years, so classified that one half may be chosen annually at the general election, on the Tuesday after the first Monday in November. Members of the assembly are elected by the people annually in districts. There shall never be more than eighty, nor less than thirty. The executive power is vested in a governor and lieutenant-governor, elected by the people for a term of two years. They must be over twenty-five years of age, citizens of the United States, and residents of the state two years next before the election. A secretary of state is appointed by the governor. A comptroller, treasurer, attorney, and surveyor-general, are to be elected by the people at the same time, and for the same term, as the governor. In elections by the legislature, the members vote *vis voce*—by the people by ballot. The judicial power is vested in a supreme, district, and county courts, the judges of all of which are elected by the people. Every white male citizen of the United States, and every citizen of Mexico under the treaty of Queretaro, twenty-one years of age, resident in the state six months, and of the district where he offers to vote thirty days preceding the election, is entitled to vote.

History.—California was first settled by the Spaniards, in 1602, but prior to the year 1697, the colonists were all expelled by the ill-used natives, when Charles II., of Spain, granted the country to the Jesuits, with the view of converting the Indians to Christianity. Under their guidance, and the protection afforded by military posts in the vicinity of their missions, by the end of the last century, numerous flourishing towns had sprung up, around which gathered thousands of the natives, by whose labor in rearing herds, and cultivating the most fertile parts of the soil, the wealth and prosperity of the Jesuits became immensely great. In 1824, California constituted one of the provinces of the new republic of Mexico, by whose acts the missions were virtually broken up, the reclaimed Indians dispersed, many of them joining the wild mountain tribes, and in the course of time, from the superior knowledge and bad habits they had acquired from the whites, they became notorious for their thievish and marauding character. In this state the country remained until 1846, when it was subjugated by the United States under the joint efforts of Stockton, Kearney, and Fremont. In 1848, it was ceded to our government by Mexico. In September of the year following its constitution was formed, by a convention of delegates at Monterey, and ratified by the people in November following; and in 1850 it was admitted into the Union as an independent state. The following is an explanation of the design on the state

seal:—Around the bevel of the ring are represented thirty-one stars, being the number of the states of the Union, on the admission of California. The foreground figure represents the goddess Minerva, having sprung full-grown from the brain of Jupiter. She is introduced as a type of the political birth of California, without having gone through the probation of a territory. At her feet crouches a grisly bear, feeding upon clusters from a grape-vine, which, with a sheaf of wheat, are emblematic of the peculiar characteristics of the country. A miner is engaged at work, with a rocker and bowl at his side; illustrating the golden wealth of the Sacramento, upon whose waters are seen shipping, typical of commercial greatness; and the snow-clad peaks of the Sierra Nevada make up the background. Above is the Greek motto, *Eureka* (I have found it), applying either to the principle involved in the admission of the state or to the success of the miners at work.

CAMBRIDGE, city, seat of justice, together with Concord and Lowell, of Middlesex co., Mass., 3 ma. N. W. of Boston; from W. 537 m. Watered by Charles river. In the old part of the city, stands Harvard university, the most ancient and wealthy collegiate institution in America. This includes a theological, medical, and law school, and has a library of about 100,000 volumes, the largest in the Union. Merchants and others doing business in Boston, reside in this city, and some of the dwellings are costly and splendid. At Cambridge, were the entrenchments of the American army when besieging Boston under Washington. Glass and other manufactures are extensively produced. From its proximity to Boston, the railroads and other lines of travel are common to both places. One mile west of the college is Mount Auburn cemetery, consecrated by nature and by art to the holy purpose to which it is devoted. The population in 1810, was 2,323; in 1820, —; in 1830, 6,071; in 1840, 8,409; in 1850, 17,417.

CHARLES RIVER VILLAGE, p. v., Norfolk co., Mass.

CHARLESTON DISTRICT, situated on the southeast boundary of South Carolina, on the Atlantic ocean, with Santee river on the northeast, and Combatree river on the southwest. Area, 2,244 square miles. Face of the country generally level; soil, in parts highly productive, while in others it is marshy or sandy. Seat of justice, Charleston. Pop. in 1820, 80,212; in 1830, 86,338; in 1840, 82,661; in 1850, 72,805.

CHARLESTON, city, and seat of justice of the district of the same name, occupies a point of land formed by the confluence of Ashley and Cooper rivers, which together enter the ocean by a spacious and deep harbor, extending seven miles below the city. It is 120 miles southeast of Columbia, the state capital, and 540 miles from Washington. Four channels, of different depths, afford an entrance into the harbor through a sand-bar which obstructs it. The deepest of these admits ships with 16 feet draught. The harbor is defended by Fort Moultrie, on Sullivan island, lying at its mouth, and by Forts Pinckney and Johnson.

The city stands on ground somewhat elevated above tide-water, and may be said to resemble New York on a smaller scale. It is constructed with regularity and taste, and many rich and varied trees of southern climes lend their charms. Besides the city proper, there are populous suburbs, which afford fine sites for residences, and are identified with its growth and interests. Charleston may be considered as the metropolis of the southern Atlantic states, as New Orleans is of those on the Mexican gulf and the Mississippi. Into this basin, flow many of the products of North Carolina and Georgia. Its foreign commerce is extensive and valuable, as is also its coasting trade, and packets, as well as splendid steamships, ply to New York and other maritime cities. The Santee canal connects Santee with Cooper river, thus opening a communication from Columbia, the state capital, to Charleston.

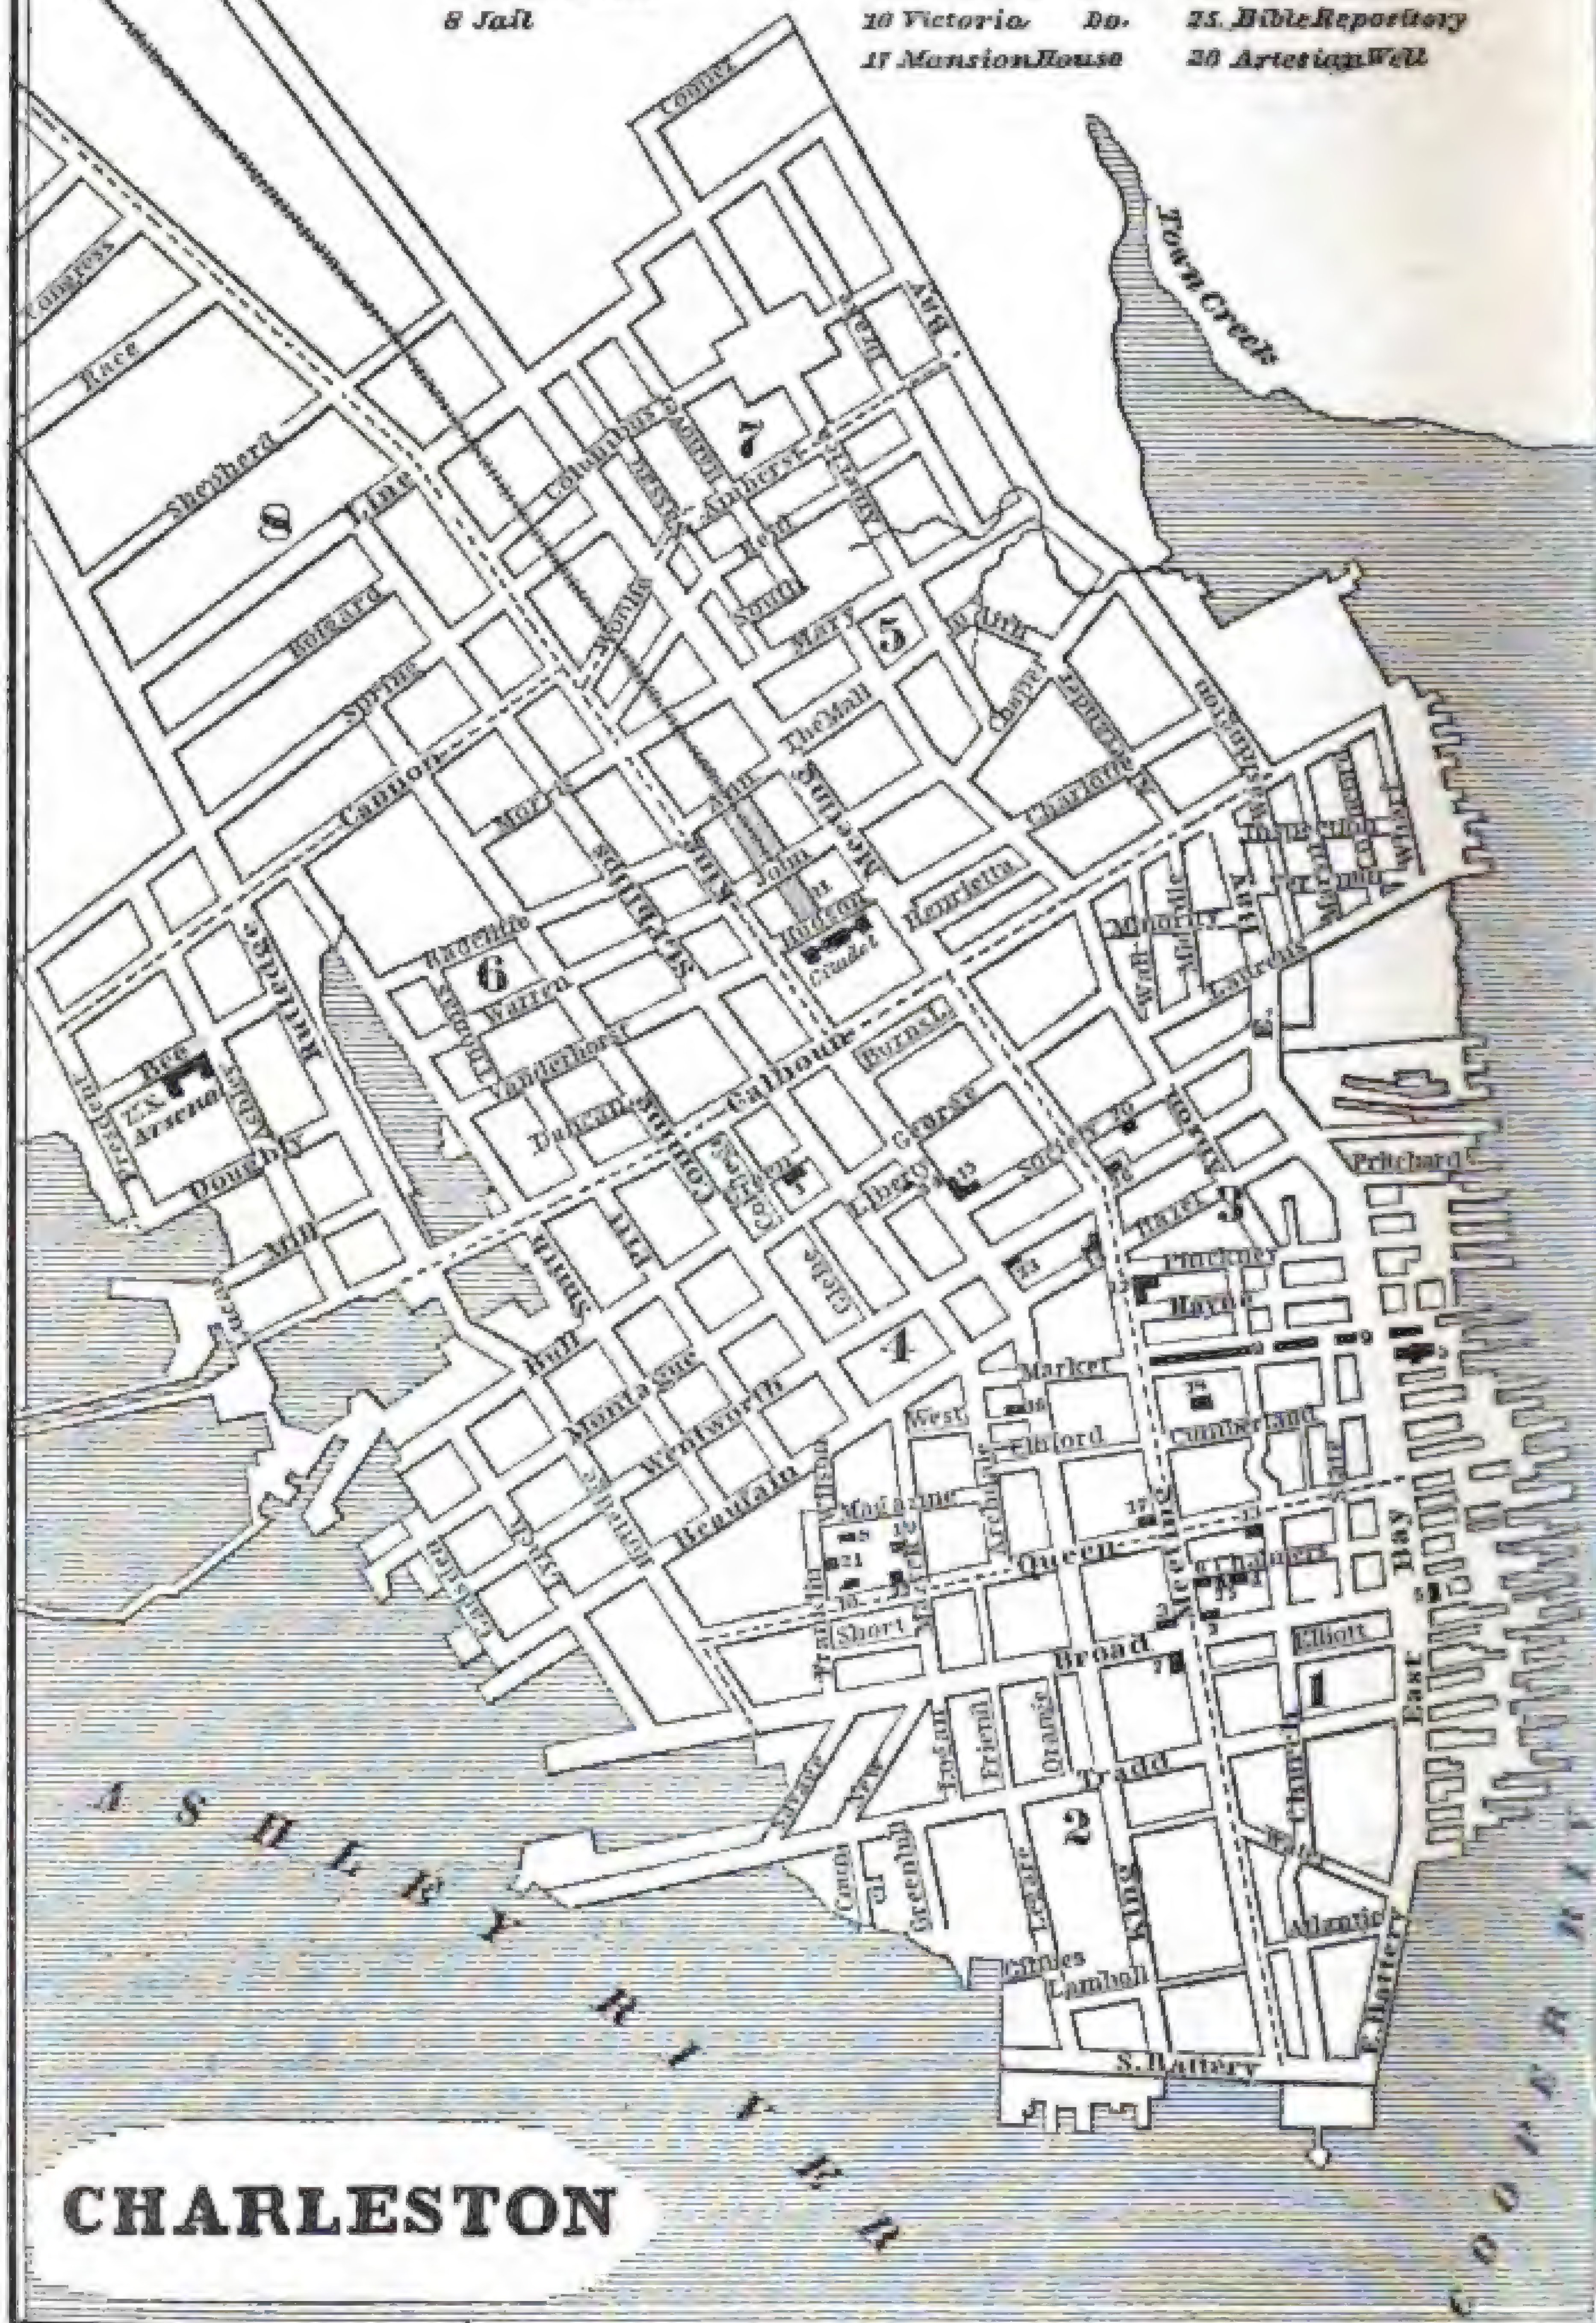

The public buildings and institutions of the city, indicate the wealth, intelligence, and liberality of the people. There are a number of banks, churches, and hotels, some of them splendid and costly. Other prominent buildings are the customhouse, guard-house, exchange, city-hall state citadel, almshouse, orphan asy-

CHARLESTON

ham, jail, and the College of Charleston. The literary and scientific institutions and libraries, are generally respectable and flourishing. No city is more justly noted for hospitality and refinement, and its climate is more salubrious than that of most southern cities, affording a delightful and safe summer resort for planters from the low country and the West Indies, and a pleasant winter resort for people from the north.

The South Carolina railroad extends to Augusta, on the Savannah, 137 miles, where it communicates with the Georgia railroad. At Branchtown, 62 miles from Charleston, the Columbia branch diverges to Camden and Columbia.

The population in 1790, was 16,359; in 1800, 18,712; in 1810, 24,711; in 1820, 24,480; in 1830, 30,289; in 1840, 29,261; in 1850, 42,925.

CHEROKEE COUNTY, situated at the extreme westerly angle of North Carolina. Area, 1,000 square miles. Face of the country generally mountainous and hilly, with a fertile soil along the stream. Seat of justice, Murphy. Pop. in 1840, 3,427; in 1850, 6,838.

CHEROKEE COUNTY, situated toward the northerly part of Georgia, and traversed by Etowah river. Area, 620 square miles. Seat of justice, Canton. Pop. in 1840, 5,895; in 1850, 12,800.

CHEROKEE COUNTY, situated on the easterly boundary of Alabama, and traversed by Coosa river. Seat of justice, Jefferson. Pop. in 1840, 8,773; in 1850, 13,881.

CHEROKEE COUNTY, situated toward the easterly part of Texas, between Angelina and Neches rivers. Area, — square miles. Seat of justice, Rusk. Pop. in 1850, 5,057.

CHEROKEE NATION of Indians, who formerly inhabited the north part of Georgia, Alabama, and Mississippi, and a portion of Tennessee, most of whom have been removed to a territory west of Arkansas, provided for them by the United States government. Schools and missionary establishments have been successfully instituted among this people from time to time; but equally or more efficacious means of civilization have been introduced through the agency of agriculture and the mechanic arts. Their numbers in 1826 amounted to about 16,000. Their territory embraces — square miles, and is traversed by Arkansas, Verdigris, and Neosho rivers. The chief town and military station is Fort Gibson on Neosho river.

CHICAGO, city, and seat of justice of Cook co., Ill., is situated on the west side of Lake Michigan, and occupies both sides of the river, from which it takes its name, and is built on the border of a prairie, elevated a little above the level of the lake. Few towns have a more advantageous position. The river, formed by the confluence of two branches, in the upper part of the city, is deep and spacious enough for a vast number of steamboats and vessels of various kinds, which here assemble from different points on the lakes, the St. Lawrence, the Erie, and Welland canals, and thickly line the wharves for some distance up the streams which form the harbor. The shore of the lake, naturally shallow, has been extended into deep water, by means of two piers, which, projecting from both sides of the harbor, protect it from the accumulation of sand. The streets of Chicago are generally broad and pleasant, lined with trees, and leading to the open prairie, or affording fine views of the lake. The buildings have the appearance of unusual comfort and convenience, while many of the public edifices are surpassed by those of few cities in the Union. Large warehouses and stores, five or six stories high, splendid hotels, churches, fine public schools, and dwellings, frequently magnificent, are some of the structures which strike the eye, and excite admiration. Twenty years ago, the lands of the adjacent prairie were the property of the Pottawatomie Indians. In 1833, the tribe removed, by treaty, to lands in Missouri, and gave up their prairie to the settlers of Chicago; since then, it has continued to increase, and of late with unexampled rapidity. The Illinois and Michigan canal, by connecting the navigation of the lake with that of the great river of the state, has caused the current of trade, which formerly flowed toward Mississippi river, to turn toward the "garden city," making it the market of the rich productions of Illinois, and of vast quantities of goods from New York and other eastern cities. The branches of commerce in which Chicago is most extensively engaged, are lumber, grain, and cattle. It exceeds all other western cities in the quantity of lumber exported; vast forests of pine and other trees, covering the northern part of Wisconsin, while immense numbers of cattle, from the interior, are here slaughtered and transported eastward, frequently to New York. The canal, which has contributed so largely to the growth of Chicago, is worthy of extended notice. Commencing about 3 miles above the mouth of the river, it traverses the valley of that stream, and of the Des Plaines, and terminates at Peru, the head of steamboat navigation on the Illinois. The whole length is 106 miles, width 60 feet, depth 6 feet. A navigable feeder, four miles long, communicates with Fox river, and the canal descends 20 feet by two locks toward the Illinois. It was begun in 1836, and finished in 1849.

The Galena and Chicago Union Railroad, commences at Chicago, and extends to Galena, the head of steamboat navigation on the Mississippi, and the depot of a region rich in lead. The central road will unite it with Mississippi river near the mouth of the Ohio, while the Southern and central Michigan roads connect it with the eastern states.

The population in 1840, was 4,479; in 1850, 29,964; in 1852, 38,733.

CHILLICOTHE, p. t., seat of justice of Ross co., O., and formerly capital of the state, is situated on the west bank of the Scioto river, 45 ma. S. of Columbus, and 93 E. N. E. from Cincinnati; from W. 405 ma. The Scioto washes its northern limit, and Paint creek its southern, here three-fourths of a mile apart. The principal streets follow the course of the river, and these are crossed by others at right angles, extending from the river to the creek. The two main streets, which cross each other at right angles at the centre of the township, are ninety feet wide. Water street, which fronts the river, is eighty-two and a half feet wide; the other streets are sixty-six feet wide. A number of ancient mounds formerly stood in the town and its vicinity. The Ohio canal passes through the place. Pop. in 1830, 2,846; in 1840, 3,977; in 1850, 7,100.

CINCINNATI, city, and seat of justice of Hamilton co., O., is situated on the north bank of Ohio river, 494 miles from its entrance into the Mississippi, 1,447 miles from New Orleans, and 492 miles from Washington. It occupies two terraces, or even surfaces, the higher rising by a regular grade, about 60 feet above the lower. Great uniformity characterizes the streets, and the city is more splendid than it appears from the water. The surrounding country is a pleasant, fertile valley, bounded by undulating slopes and hills which command de-

CINCINNATI

Boundaries of Wards ———

Rail Roads ———

lightful views of the city, the river, and its banks. Near Cincinnati are several thriving villages and towns, which are connected with it in prosperity and interests. Like most rapidly-increasing American cities, Cincinnati exhibits great diversity in the appearance of its buildings. Some are of wood and cheap material; others are solid, durable, and splendid. Extensive warehouses, stores, and dwellings, adorn the compact central portions; toward the outskirts, the buildings are more scattered and less comely.

The public buildings are numerous and generally elegant, consisting of from seventy to eighty churches; market-houses; a courthouse, 120 feet high to the top of the dome; banks, asylums, and hospitals; large and splendid hotels; public schools; libraries; the Observatory; scientific and literary institutions. Cincinnati, St. Xavier, and Woodward colleges, and Lane seminary, are located in the city, and exhibit the high regard for education which is cherished in the west.

The manufactures of Cincinnati include a great variety of articles of necessity, comfort, and luxury. Nature has supplied no remarkable water privileges; yet enterprise has constructed extensive appliances for the prosecution of manufactures. Several canals, approaching the city from different points, by means of locks and dams, perform the functions of rivers in respect to industry and trade. Cincinnati is the market and emporium of a wide extent of country, exchanging its manufactures for vast numbers of hogs and other agricultural products. This extensive trade is facilitated by the numerous natural and artificial channels of communication from various points. From its position on the Ohio, it commands the commerce of its valley, with that of the Mississippi, while Licking river enters the Ohio opposite the city, after meandering 230 miles in Kentucky. Whitewater and Miami rivers, with their navigation improved by extensive canals, largely contribute to the trade and prosperity of the place.

The water-works of Cincinnati consist of a steam engine and reservoirs on the Ohio, which contain 1,600,000 gallons.

From Cleveland and Sandusky city, 60 miles apart, on Lake Erie, two lines of railroad traverse the state, meet at Xenia, and terminate at Cincinnati.

The population in 1800, was 750; in 1810, 2,540; in 1820, 9,644; in 1830, 24,831; in 1840, 46,338; in 1850, 115,436.

CLEVELAND COUNTY, situated on the southern boundary of North Carolina. Area, 550 square miles. Seat of justice, Shelby. Pop. in 1850, 10,396.

CLEVELAND, p. v., Constantia township, Oswego co., N. Y. Watered by Oneida lake.

CLEVELAND, city, and seat of justice of Cuyahoga co., O., is finely situated on the south shore of Lake Erie, at the mouth of Cuyahoga river. It is 200 miles east of Columbus, and 359 miles from W. The shore of Lake Erie here is a bold bluff, about 80 feet high, upon the level top of which the largest and best part of the city is built. Here the streets are straight and spacious, the buildings neat and pleasant, and an open park, shaded with trees, occupies the centre. Fronting this square, are the courthouse, a church, and other prominent buildings. Hitherto, the rapid growth of Cleveland, has caused it to want that aspect of permanence which is the result of slower increase; but solid stores, hotels, and dwellings, are now rising in every quarter, making it as substantial as it is flourishing. Toward Cuyahoga river, the ground descends steeply, affording a convenient locality for stores, warehouses, and places of business. Here, the plan of the town is less regular, and not so attractive. The mouth of the river constitutes the harbor, which is deep, spacious, and accessible. Two piers of solid masonry project 1,200 feet into the lake, and mark the entrance. At the end of one of these piers stands a lighthouse; another occupies the brow of the hill on the lake. Vessels of the largest class enter the harbor, and proceed some distance up the river, but the Ohio and Erie canal, along the stream and through its bed, is the principal channel of inland navigation. This great canal connects Portsmouth, 307 miles distant, on the Ohio river, with Cleveland, and traverses the rich interior of the state. It meets the Ohio and Pennsylvania canal at Akron, in Summit county, and thus communicates with Pittsburgh and the east. By these channels, and the facilities of intercourse with New York, Canada, and Michigan, which Lakes Erie, Ontario, and Huron afford, Cleveland maintains a commerce as varied as it is extensive. Here congregate steamboats and other vessels, from every point on the vast shores of the great lakes, exchanging many foreign articles for the grain and other agricultural products of Ohio. Here, also, terminate the Cleveland and Pittsburgh, and the Cincinnati, Columbus, and Cleveland railroads. The Lake-shore railroad connects it with the Erie at Dunkirk, the Central at Buffalo, and the Southern Michigan at Toledo. The manufacturing facilities of this city are not equal to its commercial advantages. The only water-power is afforded by the Cuyahoga river and the Ohio canal, which serve to keep several establishments in operation. Such articles as are necessary to supply the demand for domestic manufacture, existing in every flourishing city, are produced by the aid of steam and other mechanical powers. The population in 1802, was about 200; in 1810, 547; in 1820, 606; in 1830, 1,076; in 1840, 6,071; in 1850, 17,034; in 1852, 25,670.

COLUMBIA DISTRICT OF, was ceded to the United States by Maryland and Virginia, in 1790, and became the seat of the national government in 1800. It was originally ten miles square, lying on both sides of the Potomac, thirty-six square miles having been taken from Virginia, which constituted the city and county of Alexandria, and sixty-four square miles from Maryland, embracing the county of Washington. By an act of Congress, in 1846, which was subsequently accepted by the people of Alexandria, that county was retroceded to the state of Virginia, and the District of Columbia is now restricted to the Maryland side of the Potomac, embracing the cities of Washington and Georgetown. This district was the theatre of disgraceful scenes, in our last war with England, in 1814. In August of that year Washington was left in a defenceless condition, when invaded by the British, and was deserted by the President, the heads of the departments, and by most of the citizens. The enemy entered the city, burned the capital, including the library of Congress, the mansion of the president, the navy-yard, with its contents, and most of the public-offices, except the patent-office. The whole world regarded this act as a violation of the rules of modern warfare. The surface of this territory is gently undulating, with some low marshes, but there are several eminences which afford fine seats for the cities within its limits. The soil, with little exception, is sterile in its natural state, but has of late been rendered productive by superior cultivation. The climate is similar to that of the contiguous states. The population in 1800 was 14,093; in 1810, 24,023; in 1820, 33,039; in 1830, 39,834; in 1840, 43,712; in 1850, 51,687. Number of slaves in 1800, 3,244; in 1810, 5,395; in 1820, 6,377; in 1830, 6,119; in 1840, 4,694; in 1850, 3,687. The civil government of this district is under the immediate authority of the United States, and the municipal power is exercised by a mayor and corporation. It has never been represented in Congress.

COLUMBIA COUNTY, situated on the east boundary of New York, with Hudson river on the west. Area, 624 square miles. Face of the country mountainous and hilly; soil generally favorable to agriculture. Seat of justice, Hudson. Pop. in 1830, 39,952; in 1840, 43,352; in 1850, 43,092.

COLUMBIA COUNTY, situated in the central part of Pennsylvania, and traversed by the east branch of Susquehanna river. Area, 700 square miles. Face of the country mountainous and hilly, with much excellent soil. Seat of justice, Danville. Pop. in 1830, 20,049; in 1840, 24,267; in 1850, 17,710.

COLUMBIA COUNTY, situated on the northeast boundary of Georgia, on the southwest side of Savannah river. Area, 600 square miles. Seat of justice, Applington. Pop. in 1830, 12,606; in 1840, 11,356; in 1850, 11,961.

COLUMBIA COUNTY, situated on the north boundary of Florida, with Suwanne river on the west. Area,

4,320 square miles. Face of the country generally flat, containing extensive pine forests and numerous small lakes. Seat of justice, Lancaster. Pop. in 1840, 2,102; in 1850, 4,808.

COLUMBIA COUNTY, situated toward the south part of Wisconsin, and traversed by Wisconsin river. Area, — square miles. Seat of justice, De Korra. Pop. in 1850, 9,565.

COLUMBIA, v., West Hampfield township, Lancaster co., Pa. Pop. 4,140.

COLUMBIA, p. v., seat of justice of Richland district, and capital of S. C., a pleasant village, situated on the east side of Congaree river, below the confluence of its constituents, the Broad and the Saluda, 120 miles northwest of Charleston, and 506 miles from Washington. The bank of the river gradually ascends to an elevation of about 200 feet, from which the town overlooks an extensive and interesting prospect. The streets are remarkable for breadth and regularity, and the houses for their neat and tasteful appearance. Here is located the College of South Carolina, a flourishing institution, which is liberally supported by the state. A substantial and well-built bridge extends on eight stone piers across the Congaree, and the Saluda canal, making a circuit of six and a quarter miles around the falls, passes through the town. The river affords steamboat communication with the ocean and with Charleston. The Columbia branch railroad meets the South Carolina railroad from Charleston, at Branchville.

Water from springs 1 mile from the town, is forced

by steam to an elevated point, whence it is conveyed to all sections of the village.

The population in 1830, was 3,400; in 1840, 4,340; in 1850, 6,060.

COLUMBIANVILLE, v., Stockport township, Columbia co., N. Y. Watered by Claverack and Kinderhook creeks.

COLUMBUS COUNTY, situated on the southern boundary of North Carolina. Area, 600 square miles. Face of the country generally flat; soil of middling quality. Seat of justice, Whitesville. Pop. in 1820, 5,912; in 1830, 4,141; in 1840, 3,941; in 1850, 5,909.

COLUMBUS, city, seat of justice of Franklin co., and capital of O., occupies a gentle slope on the east side of the Scioto river, 110 miles northeast of Cincinnati, and 363 miles from Washington. A large public square of 19 acres, in the centre of the city, is formed by the intersection of rectangular streets, and contains the statehouse, an imposing edifice of brick, with a cupola 106 feet above the ground, which displays an interesting view of a wide surface of country. Fronting this square, are also the federal courthouse, and a building for state purposes. The penitentiary is a solid and extensive structure of limestone. There are also asylums for the insane, and for the blind, deaf, and dumb; banks, churches, and numerous other prominent buildings. Columbus owes much of its prosperity to the circumstances of its being the seat of state government; but manufactures and trade are increasing with the facilities of communication. The Columbus Branch canal extends 10 miles, to the Ohio and Erie canal, which traverses the state from Portsmouth, on the Ohio, to Cleveland, on Lake Erie, a distance of 307 miles. The Cincinnati, Cleveland, and Columbus railroad communicates with this place.

The population in 1820, was 1,400; in 1830, 2,435; in 1840, 6,048; in 1850, 16,893.

COLUMBUS, p. t., Chenango co., N. Y., 98 m. W. of Albany; from W. 353 m. Watered by Unadilla river and tributaries. Pop. 1,381.

COLUMBUS CITY, p. o., seat of justice of Muscogee co., Ga., 124 m. W. S. W. of Milledgeville; from W. 757 m. Watered by Chattahoochee river.

COLUMBUS, city, seat of justice of Lowndes co., Miss., 141 m. N. E. of Jackson; from W. 855 m.; situated at the head of steamboat navigation, on the east bank of Tombigbee river, is an important and growing city. Like the other flourishing towns of Mississippi, it is an extensive market for cotton, which finds its way from this point down the Tombigbee to Mobile, and thence to various foreign and domestic ports. The city is well laid out, on an elevation, about 120 feet above the level of the Tombigbee. An elegant bridge spans this stream, and some of the public buildings are beautiful and imposing. The population in 1840, was 4,000; in 1850, 9,511.

CONCORD, city, seat of justice of Merrimac co., and capital of N. H., is situated on both sides of Merrimac river, 65 m. N. W. of Boston; from W. 475 m. Four substantial bridges connect the principal part of the town with the east side of the river, and the Contoocook, flowing through its northwest corner, at its confluence with the Merrimac, forms Dustan island, so named after Mrs. Dustan, famed in heroic Indian history. Its central position, the well-cultivated and productive surrounding region, and the communication by railroad with Boston, Portsmouth, and the interior, contribute to Concord a steady growth and prosperity. The statehouse, built of white granite, taken from the neighboring quarries, is a fine structure in the centre of the town, 126 feet long, 49 feet wide, with projections of four feet on each front, surmounted by a fine cupola. Here also is the stateprison, constructed of the same kind of material. The population in 1775, was 1,052; in 1790, 1,747; in 1800, 2,052; in 1810, 2,393; in 1820, 2,838; in 1830, 3,727; in 1840, 4,897; in 1850, 8,576.

CONNECTICUT, one of the United States, so called from its principal river, lies between 41° and 42° north latitude, and 71° 20' and 73° 15' west longitude from Greenwich, and is bounded north by Massachusetts; east by Rhode Island; south by Long Island sound; and west by New York, containing 4,674 sq. miles.

Physical Aspect.—The surface is uneven, and greatly diversified by hills and valleys. The soil is generally fertile, particularly so in Fairfield county, and the alluvial meadows in the valley of the Connecticut are uncommonly fine, and well adapted for tillage; but a large portion of the state is better suited to the purposes of grazing.

Mountains.—Strictly speaking, there are three mountain ranges in this state; one running a few miles east of the Connecticut, as far south as Chatham, where it is cut off by that river, and reappears again on the western side, and terminates at East Haven. Another range, which extends from Mount Tom, in Massachusetts, runs through the whole state, on the westerly side of the Connecticut, and terminates at New Haven, in a bold bluff called East Rock. A third range, still further west, extends from the Green Mountains, in Vermont, across the state to New Haven, and terminates in a similar bluff called West Rock. The Blue hills, in Southington, belonging to this range, are the most elevated land in the state, being at least 1,000 feet in height. At the westward of Hartford is Talcott mountain, belonging also to this range.

Rivers, Bays, Harbors, &c.—The principal rivers are, the Connecticut, Housatonic, Thames, Farmington, Naugatuck, and the Quinnebaug. The shores of Connecticut are penetrated by numerous bays and creeks, which afford many safe harbors for small vessels. The three best harbors in the state are those of New London, Bridgeport, and New Haven.

Climate.—The climate is generally healthy, though subject to sudden changes of temperature, and extreme degrees of heat and cold. In winter, the northwest winds are piercing and keen, while those which blow from the south are more mild. Near the coast the weather is particularly variable, usually changing with the wind, as it blows from the land or the sea. In the western and northerly parts of the state, the temperature is more uniform and mild.

Productive Resources.—Among the staple products may be enumerated, horses, mules, neat cattle, sheep, swine, poultry, eggs, fish, beef, pork, milk, butter, cheese, silk, wool, tobacco, hemp, flax, hay, straw, wheat, rye, barley, oats, buckwheat, Indian corn, potatoes, garden vegetables, fruits, cider and wine. Iron

CONNECTICUT

Scale of miles

Long R. from Washington

ore, of superior quality, is found in Salisbury and Kent, that of the former being particularly adapted for the manufacture of wire. At Stafford, a bog iron ore is found, from which excellent casting and hollow ware are made. Lead and copper mines exist in different parts of the state, but in general they have not been worked to much extent. A lead mine, near Middletown, was wrought with some success during the revolutionary war. At Simsbury there is also a mine of copper. In Chatham, and Haddam, a reddish-brown freestone is quarried, which is easily wrought, and is highly esteemed in modern architecture, wherever it can economically be obtained. Fine variegated marble is found at Milford, resembling verd-antique.

Manufactures.—A large proportion of the people of Connecticut are engaged in manufactures, more particularly those of cotton and woollens; also, iron, hats, paper, leather, tinware, buttons, cutlery, carriages, ship-building, &c.

Railroads and Canals.—Connecticut has over 600 miles of railroad in operation, and others projected, which will undoubtedly be carried through at an early day. The only canals in the state now in operation are those which have been constructed to facilitate navigation on the Connecticut river.

Commerce.—The commerce of Connecticut is mostly with the southern states and the West Indies. The imports and exports of 1850 amounted to \$614,320, one half of which entered and cleared at New Haven, and one fourth at New London. The shipping owned within the state amounts to about 120,000 tons. The foreign commerce of Connecticut has decreased, owing to the facilities afforded by railroad communication for shipping at New York and Boston.

Education.—There are three colleges in Connecticut; Yale college, at New Haven, one of the most flourishing in the Union; Trinity college, at Hartford; and the Wesleyan university, at Middletown. There are in the state 150 academies, and over 2,000 common schools. Connecticut has a large school fund, amounting to about \$2,000,000. The asylum for the deaf and dumb at Hartford, is the oldest and most respectable institution of the kind in the United States.

Population.—In 1790, 237,946; in 1800, 251,002; in 1810, 261,942; in 1820, 275,248; in 1830, 297,711; in 1840, 310,015; in 1850, 370,791.

Number of slaves in 1790, 2,759; in 1800, 951; in 1810, 310; in 1820, 97; in 1830, 25, who were not emancipated, on account of advanced age or infirmities.

History.—Connecticut comprises a part of the territory of the Plymouth colony, and was granted to the earl of Warwick, in 1630, extending westward from the Atlantic to the "South sea." The first permanent settlement was made in 1633, by English emigrants from Massachusetts Bay, who located at Windsor, Hartford, and Wethersfield. In 1635, another puritan colony was also established at the mouth of the Connecticut, called the "Saybrook," in honor of Lords Say and Brook, to whom, in 1631, the earl of Warwick had conveyed his title. In 1638, a third puritan colony was formed at New Haven, and remained in force until 1665. In 1639, the inhabitants of Windsor, Hartford, and Wethersfield, formed a separate government for themselves, as one public state, or commonwealth, to which the Saybrook colony was annexed, by purchase, in 1644, and with which the New Haven colony united, under the royal charter, in 1665. In 1662, the royal charter of Connecticut was granted by Charles II., embracing the territory extending westward from Narraganset bay to the Pacific, embracing within its limits the New Haven colony, and most of the present state of Rhode Island. In 1687, Sir Edmund Andros came to Hartford with a body of troops, and, by royal authority, as governor-general of all New England, demanded a surrender of this charter, and a dissolution of the existing government. The Connecticut assembly being in session at the time, were not disposed to make the surrender, and while the subject was under discussion, the lights were extinguished, and the charter secretly conveyed away, and concealed in the cavity of a hollow oak-tree, which is still standing, and bears the name of the "Charter Oak." This charter formed the basis of the government until 1818, when the present constitution was adopted. Within this charter was embraced the "Connecticut Western Reserve," consisting of about 3,300,000 acres of land in the northeast part of Ohio, which, as a compromise, was ceded to the United States, in 1796. It was sold to the Connecticut Land Company, for \$1,200,000, and was

the foundation of the state school fund. The constitution of the United States was adopted in 1788. The motto of the state seal is, *Qui transtulit sustinet*—"He who brought us hither still preserves."

Government.—The government is vested in a governor, lieutenant-governor, senate, and house of representatives, all chosen annually by the people, on the first Monday in April. The senate consists of not less than 18, nor more than 24 members. The sessions of the legislature are held annually, alternately, at Hartford and New Haven. The judicial power is vested in a supreme court of errors, superior court, and such inferior courts as the legislature may establish. Judges are chosen by the legislature, and hold office during good behavior, or till seventy years of age. The right of suffrage is enjoyed by every white male citizen of the United States, who has resided in the town six months immediately preceding, and has a freehold of the yearly value of seven dollars, or shall have performed, or been excused from, military duty, or shall have paid a state tax one year next preceding the election, and who is of good moral character.

DELAWARE, one of the United States, the smallest in the Union in respect to population, and, next to Rhode Island, in territory also, lies between 38° 27' and 39° 50' north lat., and 75° and 75° 40' west lon. from Greenwich, and is bounded north by Pennsylvania, east by the Delaware river and bay; and south and west by Maryland.

Its length from north to south is 90 miles, its greatest breadth 32 miles, and its superficial area 2,120 miles. It derives its name from the bay on which it lies, and which received its name from Lord Delaware (or de la War), governor of Virginia, who died upon its waters.

Physical Aspect.—The general aspect of this state is that of an extended plain, or several inclined plains, favorable for cultivation. Some of the upper portions of the county of Newcastle, however, are irregular and broken; the heights of Christiana are lofty and commanding; and the hills of Brandywine are rough and stony; but in the region toward Delaware river and bay there is very little diversity of surface. On the table land, forming the dividing ridge between the Delaware and Chesapeake, is a chain of swamps, which give rise to various streams, that descend the slopes to either bay. Along the Delaware river, and some ten miles into the interior, the soil generally consists of a rich clay, well adapted to the purposes of agriculture; but between this tract and the swamps the soil is sandy and light, and of inferior quality. In the county of Newcastle the soil is a strong clay; in Kent it is mixed with sand; and in Sussex the sand greatly predominates.

Rivers and Bays.—The principal streams, besides the Delaware river, which forms a part of the eastern boundary, are Brandywine, Jones, Christiana, Duck, and Mispillion creeks, and Choptank, Marshy Hope, and Nanticoke rivers. India river enters the Atlantic by a broad estuary, and Delaware bay washes the state on the east.

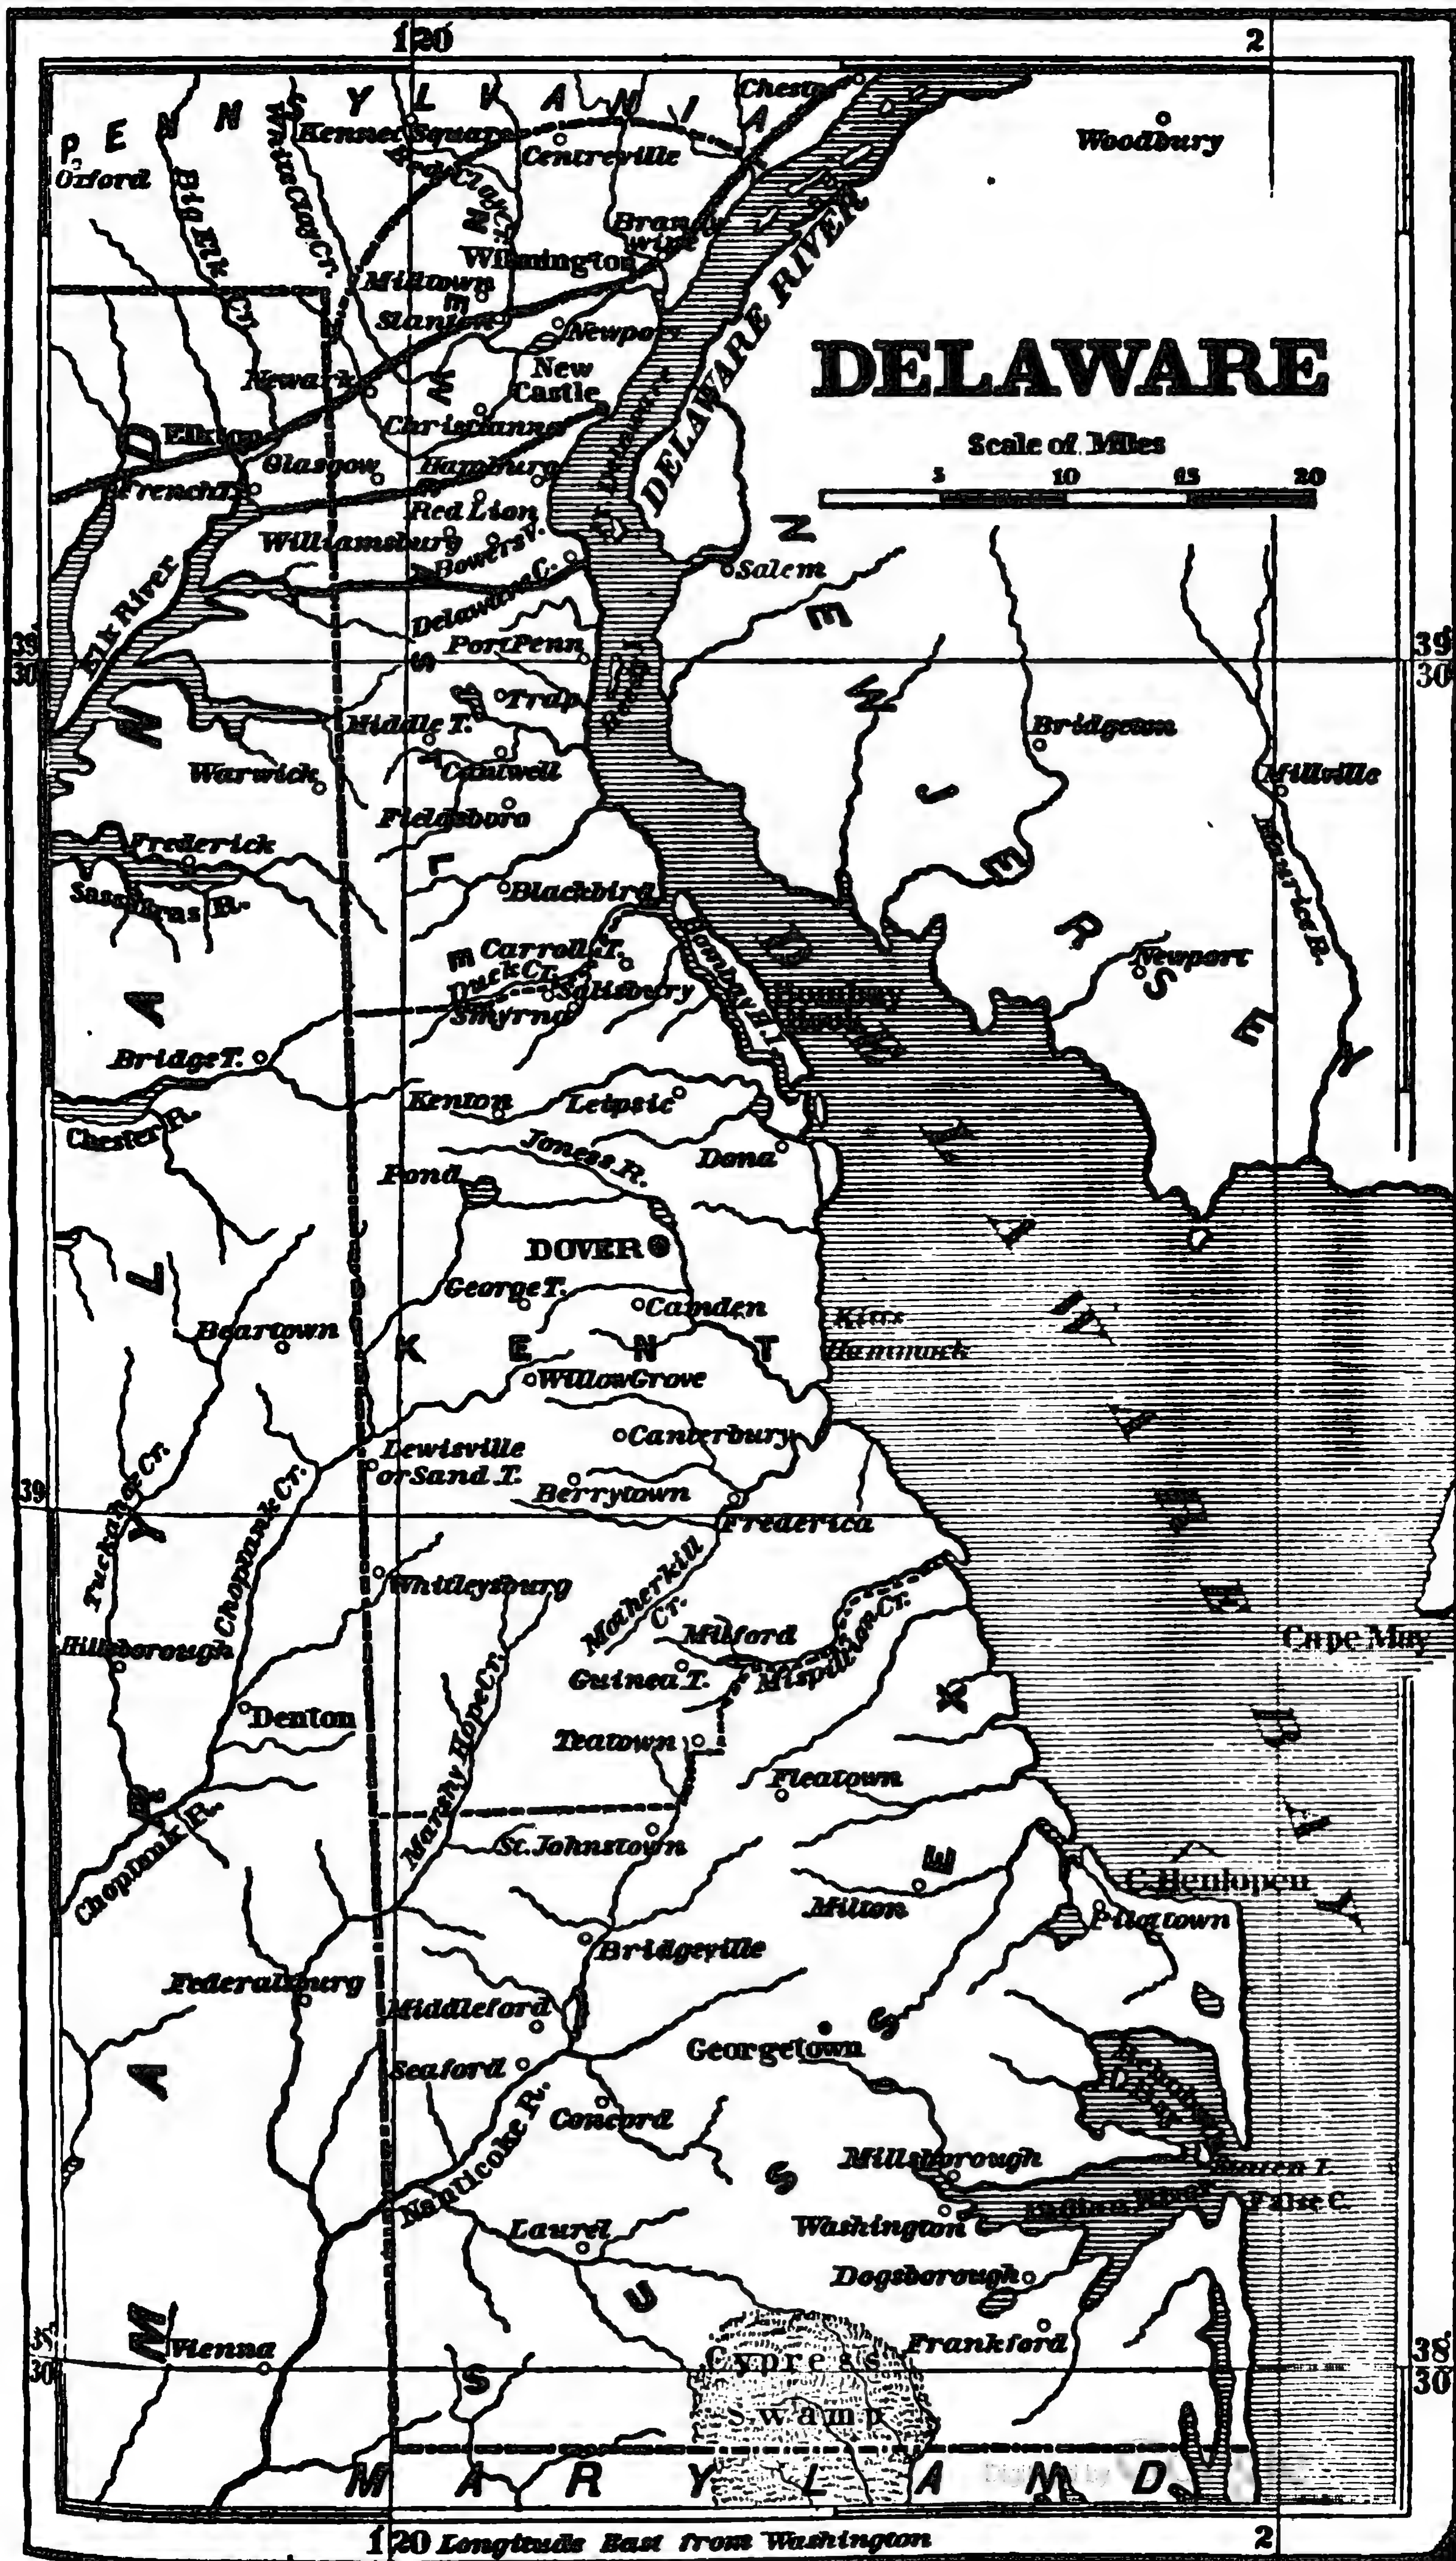

Climate.—The climate is generally mild and healthy; but the two extremes differ in temperature more than might be expected in so little extent of latitude, and in so small a difference in relative height. The winters in the northern part are somewhat cold, but never severe. The summers are hot in those situations not tempered by the breezes from the bays.

Productive Resources.—The principal staple products are horses, mules, neat cattle, sheep, poultry, eggs, swine, beef, pork, silk, wool, hay, butter, cheese, milk, wheat, rye, barley, oats, buckwheat, potatoes, peaches, and Indian corn. The county of Sussex exports large quantities of timber, obtained from Cypress swamps, or Indian river. Delaware contains but few minerals. Among the branches of the Nanticoke there are large quantities of bog iron ore, however, well adapted for castings. Before the Revolution it was worked to some extent, but since that period the business has declined.

Manufactures.—The manufactures of Delaware consist chiefly of woollen and cotton goods, leather, paper, iron, gunpowder, &c. Its flouring-mills are numerous and extensive, and its flour takes a high stand in the market.

Railroads and Canals.—The only railroads within the state are, the Frenchtown, from Newcastle to Frenchtown, 16 miles; the Philadelphia and Wilmington, and the Wilmington and Baltimore, which form part of the great line of travel from the northern to the southern Atlantic states. The Chesapeake and Delaware sloop canal, 14 miles long, is the only canal in the state. It extends from Delaware city to Back creek, and unites the waters of the two great bays from which it takes its name.

Commerce.—The foreign commerce of Delaware is very small. The amount of shipping owned in the

state is about 17,000 tons, 15,000 of which is engaged in the coasting-trade.

Education.—There is but one college in Delaware, which is located at Newark, and was founded in 1833. There are about 30 academies, and 250 common schools in the state.

Population.—In 1790, 59,094; in 1800, 64,273; in 1810, 72,974; in 1820, 72,749; in 1830, 76,739; in 1840, 78,085; in 1850, 91,535. Number of slaves in 1790, 8,887; in 1800, 6,153; in 1810, 4,177; in 1820, 4,509; in 1830, 3,292; in 1840, 2,605; in 1850, 2,289.

Government.—The legislative power is vested in a senate, of nine members, three from each county, chosen for four years, and a house of representatives, of twenty-one members, seven from each county, chosen for two years. The executive power is vested in a governor, chosen for four years, and ineligible ever after. General election, biennially, second Tuesday in November, and the legislature meets at Dover on the first Tuesday in January. The judicial power is vested in a court of errors, superior court, court of chancery, orphan's court, oyer and terminer, general sessions, register's court, and such other courts as may be established by law. The right of suffrage is granted to every white male citizen, twenty-two years of age, after one year's residence in the state, and one month in the county where he votes, and having within two years paid a tax; also to those persons, qualified as aforesaid, twenty-one years of age, without payment of tax.

History.—Lord Delaware, governor of Virginia, first entered the bay known by his name in 1610. The Dutch from the New Netherlands (New York) soon afterward visited it, and claimed jurisdiction. The first permanent settlement upon the Delaware was made by a colony of Swedes, in 1627, under the auspices of the Swedish West India Company. The Dutch asserted their claim by an appeal to arms, and, with a competent force, took possession of the country, in 1655, and attached it to the New Netherlands. When the latter came into the possession of the Duke of York, in 1681, William Penn, as stated in the history of Pennsylvania, purchased what is now the state of Delaware, and annexed it to Pennsylvania. Delaware had a legislature separate from that of Pennsylvania, but after 1703 one governor ruled both. It remained in this subordinate condition until 1776, when the inhabitants declared it a free and independent state, and organized a government under it. It was the first to ratify the constitution, which it did on the 7th of December, 1787. Its state constitution was adopted in 1792, and revised and amended in 1831. Motto of the state seal, "Liberty and Independence."

DELAWARE COUNTY, situated toward the southeast part of New York, with Delaware river on the southwest. Area, 460 square miles. Face of the country rough and hilly; soil fertile in the valleys. Seat of justice, Delhi. Pop. in 1820, 26,587; in 1830, 32,933; in 1840, 35,396; in 1850, 39,825.

DELAWARE COUNTY, situated in the southeast part of Pennsylvania, with Delaware river on the southeast. Area, 220 square miles. Seat of justice, Chester. Pop. in 1820, 14,810; in 1830, 17,361; in 1840, 19,791; in 1850, 24,679.

DELAWARE COUNTY, situated in the central part of Ohio. Area, 610 square miles. Watered by Scioto and Whetstone rivers. Face of the country flat or rolling; soil generally productive. Seat of justice, Delaware. Pop. in 1820, 7,639; in 1830, 11,523; in 1840, 22,060; in 1850, 21,817.

DELAWARE COUNTY, situated in the eastern part of Indiana. Area, 384 square miles. Seat of justice, Muncietown. Pop. in 1830, 2,372; in 1840, 8,843; in 1850, 10,843.

DESRAYAVILLE, p. o., Rapides parish, La.

DETROIT, city, and seat of justice of Wayne co., Mich., occupies a pleasant and commanding situation, on the west bank of Detroit river, 18 miles from Lake Erie, and 7 miles from Lake St. Clair. Between the two great lakes, Huron and Erie, upon both of which, its vessels carry on an extensive trade, through Lakes Superior and Michigan, and with Canada, Pennsylvania, and New York. It is an important metropolis of the western states, and is destined to a still higher rank than it now holds. The city is agreeably laid out with

broad streets, some of which converge at the "Circus," a spacious public ground. Among the other parks, is the "Campus Martius," near the centre of the city. Parallel with the river, at the foot of the eminence upon which the town is built, is a street lined with warehouses and stores. Above this, another street runs in the same direction, and still further to the west, is the principal business street, which is closely built with stores, dwellings, and public buildings. Here, until 1847, when the seat of government was removed to Lansing, stood the statehouse, from the high dome of which appears an enchanting prospect of the river, Lake St. Clair, and their picturesque and romantic shores. Other buildings are the city-hall, bank of Michigan, churches, markets, schools, and various scientific and literary institutions. Several hundred steamboats and other vessels, from various places on the lakes, visit Detroit during the season of navigation, which lasts about two thirds of the year.

The Michigan Central railroad extends 281 miles toward Chicago, on Lake Michigan; and the Detroit and Pontiac railroad is 25 miles long.

The population in 1810, was 770; in 1820, 1,422; in 1830, 2,222; in 1840, 9,102; in 1850, 21,119.

FALL RIVER, p. t., Bristol co., Mass., 51 ms. S. of Boston. It lies on the outlet of Watuppa pond, a considerable body of water, which passes through Fall river into the Taunton, affording a good and constant water-power. Along this stream are numerous mills, and factories of cotton, wool, machinery, &c., which produce articles to a large amount. Having a good harbor at the entrance of Taunton river into Bristol bay, its commerce is considerable. Ships of a large class, engaged in both the whale-fishery and foreign trade, anchor at its wharves. Besides manufactories, the town contains churches, banks, hotels, and schools of a superior order. There is a line of splendid steamboats running daily between this place and New York, and the Fall River railroad connects it with Boston. The population in 1840, was 9,000; in 1850, 11,524.

FLORIDA, (so called by Juan Ponce de Leon, in 1812, from having discovered the coast on Pascua Florida, the name, in Spanish, for Easter,) the most southern state in the union, lies between 25° and 31° north latitude, and 80° and 87½° west longitude from Greenwich; and is bounded north by Alabama and Georgia,

east by the Atlantic, south by the gulf of Mexico, and west by the gulf of Mexico and Alabama. Its superficial area is 59,000 square miles, of which but about one half is yet surveyed and occupied.

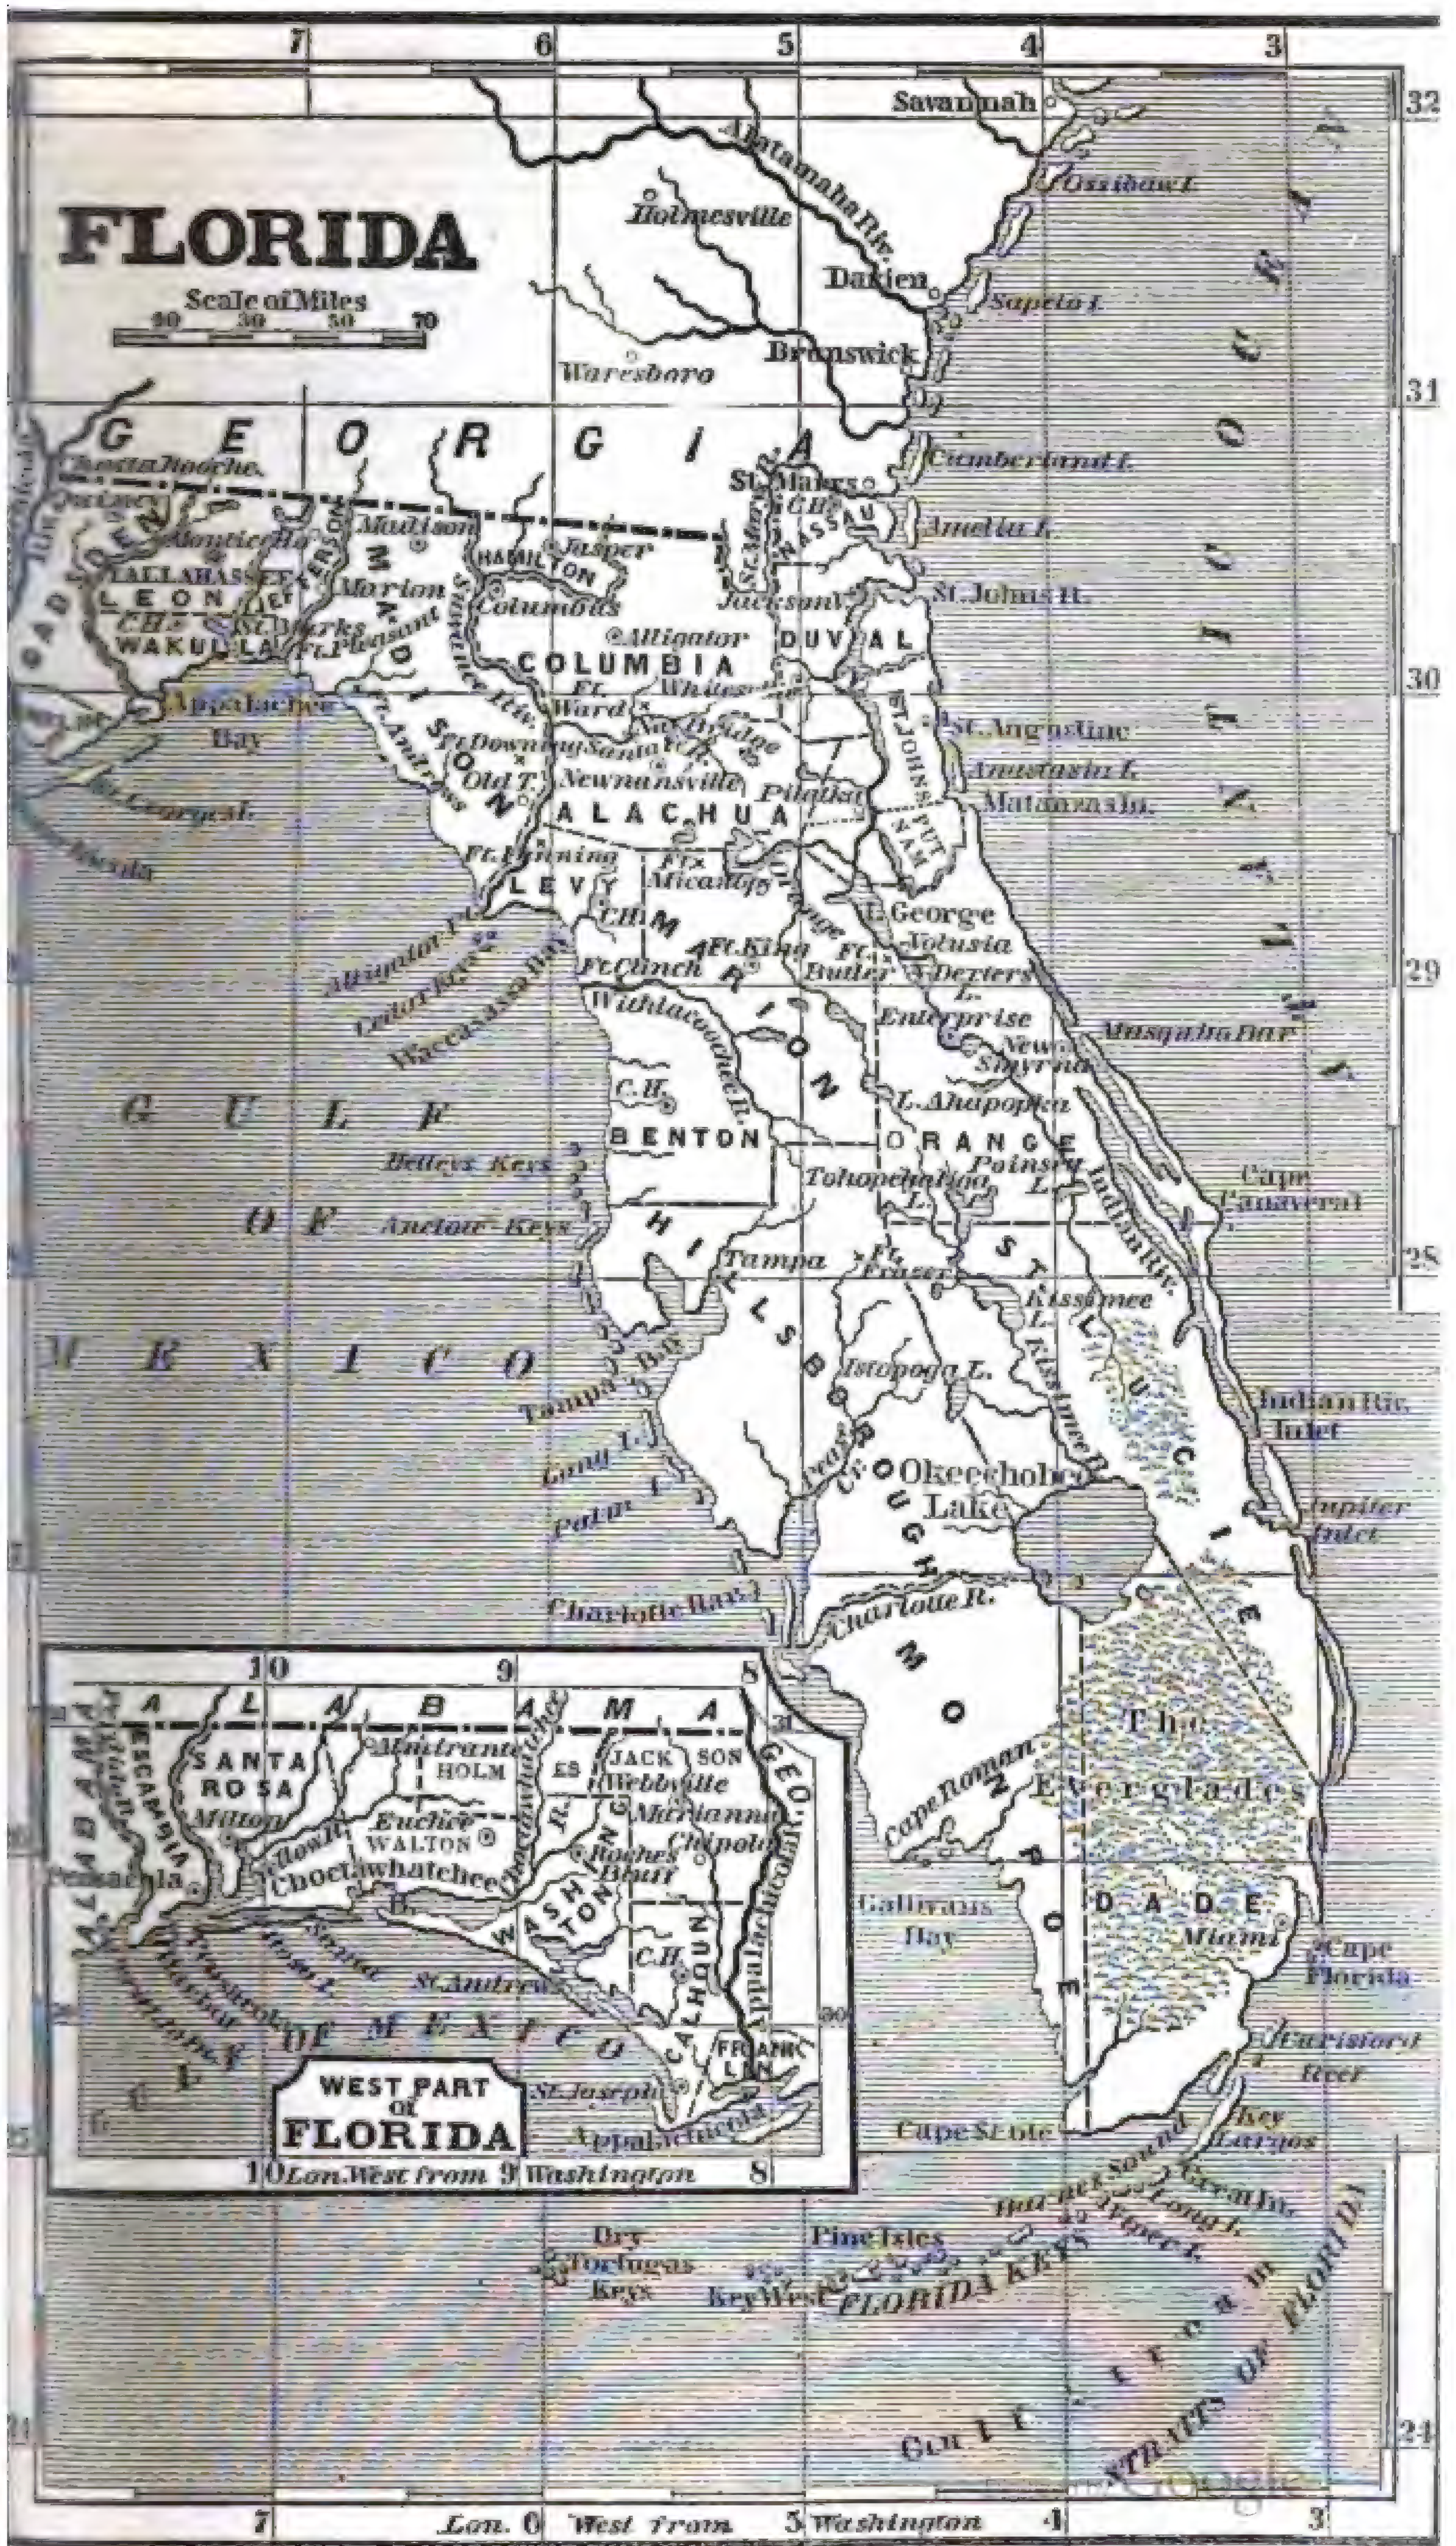

Physical Aspect.—The face of the country is generally level, and not much elevated above the sea, though we find along the whole northern boundary considerable diversity of surface. A base of calcareous rock commences in the northern part of the state, and probably extends under the whole peninsula. This friable stone outcrops the surface of St. Augustine, and other parts on the main, and reappears again on the southern keys, as well as on the Bahamas, and the northern shores of Cuba, on the opposite side of the gulf. In Florida, this formation is generally overlaid by deep super-strata of clay, shells, and sand. The soil, however, generally is sandy, except in places called "hummocks," where it consists either of reddish-yellow or black clay, mixed with sand. These hummocks, which are numerous and much scattered throughout the state, vary from a few acres to several miles in extent, and constitute no small part of the peninsula. Another in-

considerable portion of Florida consists in what is generally known in the south by the name of "pine-barrens," much of the soil of which is exceedingly poor; though there are extensive tracts of hummock, tableland, and swamp, of the richest character, well adapted to cultivation. These barrens, wherever intersected by streams of pure water, however poor they may be, afford excellent ranges for grazing. The southern portion of the state presents singular alternations of savannas, hummocks, lakes, and grass-ponds, called collectively "everglades," which extend from Cape Sable into the heart of the country for several hundred miles. This region, including two large swamps, one named Atsenahooffa, on the western side, and the other Halpabooka, on the northeastern side, embracing the large lake Okeechobee, covers an area of 7,000,000 acres, 4,500,000, of which are usually submerged in water, from two to seven feet deep. The "Pahhayeokee," or "grass-water," as the Indians call the everglades comprises from 1,000,000 to 1,500,000 acres of submerged lands. The basin of the everglades is surrounded by a rim of soft lime-rock, from half a mile to five miles in width, and its bottom is represented to be some 12 to 15 feet above the level of the sea. Deep tide rivers extend from the ocean and gulf quite up to the margin of the river; and comparatively, at a small outlay, millions of acres of land, now worthless, could be drained by canals, and brought into the highest state of improvement. Within this basin are thousands of islets, of the richest class of land, and the glades are often filled with tall grass, from six to ten feet in height, the annual decay of which has occasioned a deposit in the water from two to six feet thick. This tract lies south of 27½° of north latitude, where there is seldom or no frost; and if it were reclaimed, as suggested above, it would be adapted to the cultivation of the orange, the pineapple, rice, sugarcane, and other tropical plants.

Rivers, Lakes, and Bays.—The principal rivers are the St. John's, Appalachicola, Suwanee, St. Mark's, St. Mary's, Ocklocony, Escambia, Withlacoochee, Ocala, Choctawhatchee, Yellow-Water, Amasura, Anclota, Hillsborough, Charlotte, Gallivan's, Young's, Kissimee, and the Perdido; the latter of which forms the western boundary between this state and Alabama. The St. John's is an anomaly among the rivers of the Atlantic coast. Its source is rather undefinable, being derived from the flat grassy plains, or savannas, is about latitude 28° north, probably not more than 20 miles from the sea. It is exceedingly winding in its course, running in a northerly direction, to a distance of nearly 300 miles. In some places it has more the appearance of a lake, or sound, than a river, swelling out from three to five miles in breadth; while in other parts it dwindles down to a quarter of a mile wide. Vessels drawing eight feet of water ascend to Lake George, a beautiful expansion of this stream, 150 miles from its mouth. The chief lakes are, the Great Okeechobee, George, Dunn's, Cypress, Monroe, Orange, Istopoga, Tobokopoligia, Weeok, Yakapka, Jessup, Harney, Eutis, Poinsett, Beresford, Ashe, Winsor, Gardiner, Griffin, and Gentry. There are numerous bays on the western side, some of which form good harbors. Among these are, Perdido, Pensacola, Choctawhatchie, St. Andrew's, St. Joseph's, Appalachicola, Appalachee, Tampa, Charlotte, and Gallivan's. In front of Pensacola bay is a long, shallow lagoon, called Santa Rosa sound. On the east coast of the state there are but few bays, properly speaking. Fernandina bay forms the mouth of St. Mary's river. Mosquito and Indian river, or St. Lucia sounds, are situated near Cape Canaveral, which are entered by inlets of the same names. Many of the rivers on this side of the peninsula form good harbors for coasting vessels.

Islands and Keys.—Florida is remarkable for the great number of small low islets which lie in the vicinity of its shores, called "Keys." The most noted of these are Key West (formerly called Thompson's island), Indian, Sand, Pine, and Cedar keys. The most noted islands are, Merit's, and Hutchinson's, near Cape Canaveral; Amelia island, near St. Mary's sound; Sanybel, Pine, Captive, and Gasparilla islands, near Charlotte harbor; Mullet island, near Tampa bay; St. George's, and Dog islands, near Appalachicola bay; Santa Rosa island, near Pensacola bay; and Drayton island, in Lake George. Cape Sable is the southernmost point in the United States.

Climate.—Florida presents some diversity of seasons;

but the difference of relative level being small, and surrounded as it is by water on three sides, it enjoys a climate peculiar to itself. On the seaboard it is generally healthy for eight or nine months in the year, and in some parts remarkably so the whole year round. In the interior, it is quite as salubrious as it is in either of the other southern states, unless it be in the vicinity of marshes, or stagnant waters, where fevers and other epidemics invariably prevail. The winters are mild, and usually without frost, though the mercury occasionally sinks to 30° Fahrenheit, and sometimes as low as 26°; in summer, the temperature seldom exceeds 97°. The climate of the southernmost keys is truly tropical.

Productive Resources.—The staple products consist of horses, mules, neat cattle, sheep, swine, poultry, hay, wool, tobacco, cotton, wheat, oats, potatoes, oranges, sugar, molasses, and Indian corn. The forests produce an abundance of live-oak timber, cedar, and yellow pine. Turtle and other fisheries are carried on somewhat extensively among the keys. Salt is made in small quantities, and granite is quarried to some extent.

Manufactures.—Florida being mostly an agricultural state, but little attention as yet has been paid to manufactures. In 1850 there were but 121 manufacturing establishments, producing to the extent of \$500 and upward each annually.

Railroads and Canals.—The legislature of Florida has granted several charters for railroads in this state, but thus far there are neither railroads nor canals within its borders.

Commerce.—The direct foreign commerce of Florida amounts to about \$3,000,000 annually. Shipments are also extensively made through New Orleans, and the Atlantic ports. The coasting trade of Florida is also considerable. The shipping in the state amounts to about 12,000 tons.

Education.—The constitution of Florida provides for the establishment of common schools throughout the state, but thus far little progress has been made in affording facilities for elementary education. There are academies and grammar-schools in the more populous towns, but no collegiate institution.

Population.—In 1830, 34,723; in 1840, 54,477; in 1850, 87,401. Number of slaves in 1830, 15,501; in 1840, 25,717; in 1850, 39,309.

Government.—The legislative power is vested in a senate and house of representatives. The senate consists of 19 members, elected by the people, in districts, for two years. The representatives are elected by the people, by counties, biennially, their number never to exceed sixty; present number, thirty. Biennial election, first Monday in October. The executive power is vested in a governor, who is chosen by the people once in four years, and is not eligible the succeeding term. The judicial power is vested in a supreme court, having appellate jurisdiction only; also in circuit courts, the state being divided into four circuits, in each of which a judge of the supreme court has jurisdiction. The judges are elected by the legislature, at first for five years; after that term, during good behavior. There are also courts of probate. The right of suffrage may be exercised by every free white male, aged 21 years, or upward, who has resided in the state for two years, and in the county for six months, and who shall be enrolled in the militia, or be by law exempted from serving therein.

History.—The present state of Florida embraces a portion of the ancient Florida, which extended from its southernmost cape to the river Panuco, in Mexico, and westward to the Pacific, and the undefined regions on the north. It was first explored by Juan Ponce de Leon, in 1512, in search of a spring called the "fountain of youth," which was supposed to have the power of renewing the vigor of youth in the aged. In 1526, it was formally taken possession of in the name of the king of Spain, by Pamphilo de Narvaez, who had been sent out as governor. The first permanent settlements were made at St. Augustine, in 1565, and at Pensacola, in 1699; though an unsuccessful attempt had been made, by a colony of Huguenots, in 1562-'64, under Ribault. Though often invaded by the English and French, this territory remained a part of the Spanish dominions until 1763, when it was ceded to Great Britain, but restored again to Spain in 1783. From the year 1699 to 1763, the acknowledged boundary between Florida and Louisiana was the river Perdido, but when the

latter came into the possession of the Spaniards, for convenience, West Florida was extended to the Mississippi. From this circumstance arose the difficulties between Spain and the United States, on their purchase of Louisiana of the French, in 1803. In 1781, Governor Galvez, of Louisiana, invaded and conquered West Florida; but by the treaty of Paris, in 1793, it fell once more to Spain, who held it until 1798, when this portion of Florida, which was claimed as far north as Altamaha river, in Georgia, was relinquished to the United States. By virtue of their claims to that portion of Louisiana lying between the Mississippi and Perdido rivers, as held by France prior to 1763, the United States in 1811, seized Baton Rouge, and all other parts of the disputed territory west of Perdido, except Mobile, which also surrendered in 1812. After a protracted and uninterrupted negotiation, Florida was ceded to the United States, in 1819, ratified by Congress as a territory in 1821, and admitted into the Union as an independent state in 1845. Motto of the seal, "Let us alone."

FRANKFORT, seat of justice of Franklin co., and capital of the state of Kentucky. Situated on a circular bend, on the north side of Kentucky river, 60 miles from its entrance into the Ohio, and 452 miles from Washington. The river here winds through deep limestone banks, which afford a level site for the town, and for South Frankfort, on the opposite side, with which it is connected by a bridge. Behind the town, the plain rises several hundred feet into a table-land, from which ap-

pears a magnificent prospect of the river, and a wide extent of country. Frankfort is a well-built village, with neat and solid dwellings, of brick or white marble. Of this material, which the limestone region along the river furnishes in great plenty and excellence, the state-house is constructed, a splendid building, with a portico supported by Ionic pillars at the front, and a lighted cupola upon the roof. There are also a penitentiary, courthouse, churches, banks, &c. The citizens of Frankfort display the accustomed intelligent hospitality which is a characteristic of Kentuckians. The manufactures of the town are considerable, and steamboats ascending to this point with high water, carry on a trade with the valleys of the Mississippi and Ohio rivers.

The Lexington and Ohio railroad, between Lexington and Louisville, 92 miles long, communicates with Frankfort.

The population in 1810, was 1,099; in 1820, 1,679; in 1830, 1,660; in 1840, 1,917; in 1850, 4,372.

FRANKFORT, p. v., seat of justice of Clinton co., Ind. 92 ms. N. W. of Indianapolis; from W. 600 ms. Watered by the south fork of Wild Cat creek. Pop. 582.

FRANKFORT, p. v., seat of justice of Franklin co., Ill., 100 ms. S. E. of Springfield; from W. 811 ms.

FRANKFORT HILL, p. o., Herkimer co., N. Y.

FRANKFORT SPRINGS, p. o., Beaver co., Pa.

FRANKLIN COUNTY, situated toward the westerly part of Maine. Area, 1,803 square miles. Seat of justice, Farmington. Pop. in 1840, 20,801; in 1850, 20,027.

FRANKLIN COUNTY, situated at the northwest corner of Vermont, with Lake Champlain on the west. Area, 600 square miles. Face of the country hilly and mountainous; soil, on the streams, fertile. Seat of justice, St. Albans. Pop. in 1810, 16,427; in 1820, 17,192; in 1830, 24,525; in 1840, 24,531; in 1850, 28,586.

FRANKLIN COUNTY, situated on the northerly boundary of Massachusetts, and traversed by Connecticut river. Area, 650 square miles. Face of the country agreeably diversified with mountains, hills, and valleys; soil generally fertile, on the streams rich and productive. Seat of justice, Greenfield. Pop. in 1810, 27,201; in 1820, 29,268; in 1830, 29,344; in 1840, 28,812; in 1850, 30,870.

FRANKLIN COUNTY, situated on the northerly boundary of New York. Area, 1,527 square miles. Face of the country, in the southern part, mountainous, toward the north, uneven. Seat of justice, Malone. Pop. in 1810, 2,717; in 1820, 4,439; in 1830, 11,332; in 1840, 16,518; in 1850, 25,102.

FRANKLIN COUNTY, situated on the southerly boundary of Pennsylvania. Area, 734 square miles. Face of the country diversified with mountains, hills, and valleys; soil varied, consisting principally of two formations; one of slate, extending through the northwesterly part; the other, of limestone, which covers the southeasterly part, and is much more of a productive soil. Seat of justice, Chambersburgh. Pop. in 1810, 23,083; in 1820, 31,192; in 1830, 35,103; in 1840, 37,739; in 1850, 39,904.

FRANKLIN COUNTY, situated in the southerly part of Virginia, with Roanoke river on the north. Area, 771 square miles. Face of the country undulating; soil generally fertile. Seat of justice, Rocky Mount. Pop. in 1810, 10,724; in 1820, 12,017; in 1830, 14,911; in 1840, 15,432; in 1850, 17,430.

FRANKLIN COUNTY, situated toward the northerly part of North Carolina, and traversed by Tar river. Area, 540 square miles. Face of the country uneven; soil in the valleys generally fertile. Seat of justice, Louisburgh. Pop. in 1810, 10,166; in 1820, 9,741; in 1830, 10,665; in 1840, 10,980; in 1850, 11,713.

FRANKLIN COUNTY, situated on the northeasterly boundary of Georgia. Area, 680 square miles. Face of the country broken; soil varied. Seat of justice, Carnesville. Pop. in 1820, 9,040; in 1830, 10,135; in 1840, 9,886; in 1850, 11,513.

FRANKLIN COUNTY, situated on the southerly shore of the western section of Florida, on the gulf of Mexico. Area, 700 square miles. Face of the country low and swampy; soil along the Appalachicola river, which bounds it on the west, fertile. Seat of justice, Appalachicola. Pop. in 1840, 1,030; in 1850, 1,561.

FRANKLIN COUNTY, situated on the westerly boundary of Alabama, with Tennessee river on the north. Area, 648 square miles. Face of the country hilly and broken; soil productive. Seat of justice, Rus-

sellville. Pop. in 1820, 4,988; in 1830, 11,078; in 1840, 14,270; in 1850, 19,610.

FRANKLIN COUNTY, situated in the southwesterly part of Mississippi. Area, 720 square miles. Face of the country hilly; soil, on the streams, very productive. Other parts contain open pine woods. Seat of justice, Meadville. Pop. in 1820, 3,881; in 1830, 4,622; in 1840, 4,775; in 1850, 5,904.

FRANKLIN COUNTY, situated on the southerly boundary of Tennessee. Area, 840 square miles. Face of the country mountainous and hilly; soil fertile. Seat of justice, Winchester. Pop. in 1810, 5,730; in 1820, 16,571; in 1830, 15,620; in 1840, 12,033; in 1850, 13,768.

FRANKLIN COUNTY, situated in the northwesterly part of Arkansas, and traversed by Arkansas river. Area, 800 square miles. Seat of justice, Ozark. Pop. in 1840, 2,665; in 1850, 3,500.

FRANKLIN COUNTY, situated toward the northerly part of Kentucky, and traversed by Kentucky river. Area, 200 square miles. Face of the country mountainous and hilly; soil fertile. Seat of justice, Frankfort. Pop. in 1810, 8,013; in 1820, 11,024; in 1830, 9,254; in 1840, 9,420; in 1850, 12,462.

FRANKLIN COUNTY, situated in the central part of Ohio, and traversed by Scioto river. Area, 529 square miles. Face of the country even, inclined to the south; soil mostly alluvial, or mixed sand, pebbles and clay, and in general better suited for grazing than tillage. Seat of justice, Columbus. Pop. in 1810, 3,486; in 1820, 10,300; in 1830, 14,756; in 1840, 25,049; in 1850, 42,910.

FRANKLIN COUNTY, situated in the southerly part of Illinois. Area, 866 square miles. Face of the country generally level; soil productive. Seat of justice, Benton. Pop. in 1820, 1,763; in 1830, 4,083; in 1840, 3,682; in 1850, 5,681.

FRANKLIN COUNTY, situated on the easterly boundary of Indiana, and traversed by White Water river. Area, 540 square miles. Face of the country moderately hilly; soil fertile. Seat of justice, Brookville. Pop. in 1820, 10,763; in 1830, 10,199; in 1840, 13,349; in 1850, 5,768.

FRANKLIN COUNTY, situated toward the easterly part of Missouri, with Missouri river on the north. Area, 850 square miles. Face of the country broken and hilly; soil mostly sterile. Seat of justice, Newport. Pop. in 1820, 2,379; in 1830, 3,484; in 1840, 7,515; in 1850, 11,021.

FRANKLIN PARISH, situated toward the northeasterly part of Louisiana. Area, — square miles. Seat of justice, Winnaborough. Pop. in 1850, 3,251.

FRANKLIN, p. t., Hancock co., Me., 101 ms. N. E. of Augusta; from W. 683 ms. Watered by Taunton and Frenchman's bays. Pop. 736.

FRANKLIN, p. t., Merrimack co., N. H., 18 ms. N. W. of Concord; from W. 499 ms. Watered by Pemigewasset and Winnipisogee rivers, where they unite and form the Merrimack. Pop. 1,251.

GALEN, t., Wayne co., N. Y., 172 ms. W. of Albany. Watered by Clyde river, and the Erie canal. Pop. 4,609.

GALENA, p. v., Berks township, Delaware co., O., 21 ms. N. of Columbus; from W. 399 ms.

GALENA, a thriving city, the seat of justice of Jo-Davies co., Ill., is situated on both sides of Fevre, or Bean river, six miles above its entrance into the Mississippi, and the largest boats ascend to this point at all stages of the water. The city is mostly built on the west side of the river, yet it is rapidly extending on the opposite side, with which it is connected by three substantial bridges. This is the centre of the great lead region, which occupies the northwestern portion of Illinois, and the southwestern corner of Wisconsin, together with a strip of a few miles in width on the opposite side of the Mississippi in Iowa, equal to a surface of nearly three thousand square miles. In riding over the country from Galena to the Wisconsin river, the most remarkable feature presented is the numerous "diggings." Its trade with the surrounding country is extensive, embracing a circuit of 30 to 100 ms. The town presents a very metallic appearance, inasmuch as its wharves, for quite a distance, are lined with piles of pig-lead. It is estimated by those whose knowledge and experience render them competent to judge, that if the mines already opened were well worked, they are capable of producing 150,000,000 pounds annually for ages to come. The population of Galena in 1850, was 6,004.

GALVESTON COUNTY, situated on the southerly boundary of Texas, with Galveston bay on the east, and the gulf of Mexico on the south. It includes Galveston island. Area, — square miles. Seat of justice, Galveston. Pop. in 1850, 4,529.

GALVESTON, city, seat of justice of Galveston co., at the northeasterly part of Galveston island, Texas. Between the town and Pelican island, on the north-west, the entrance to the bay is deep and spacious, affording a good harbor and anchorage. Steamboats and other vessels arrive at Galveston from different points on the gulf of Mexico; and it is the chief commercial place in the state. There are a number of stores, dwellings, and other buildings, the white walls of which appear finely from the water, but occasion disappointment when more closely viewed.

The population in 1840, was 5,000 to 7,000; in 1850, 6,000.

GEORGETOWN, city, Washington co., D. C.; separated from Washington city by Rock creek, and distant from the Capitol about three miles. It is beautifully located, the ground on which the town stands rising to a considerable height above the Potomac, upon which it fronts. The scenery around is varied and pleasant; and on the west stand the picturesque and rocky hills, which here begin to change the aspect of the river's banks. The public buildings and private

dwellings have a substantial appearance. The Roman catholic college and the churches are especially magnificent. The Chesapeake and Ohio canal commences at Georgetown. Oak Grove Cemetery is located in this town, and is handsomely laid out. Georgetown was formerly a place of considerable business and manufactures; but its progress of late years has not kept pace with that of many other towns. Its population has been almost stationary for the last twenty years; in 1830 it was 7,350; in 1840, 7,312; and in 1850, 8,366.

GEORGETOWN, c. h., p. v., seat of justice of Georgetown district, S. C., 152 ms. s. e. of Columbia; from W. 428 ms. Watered by Winyaw bay and Sampit creek. Pop. 915.

GEORGIA, so called in honor of its royal grantor, George II. of England, and the most southern of the original thirteen states, lies between 30° 19' and 35° north latitude, and 80° 50' and 85° 40' west longitude from Greenwich; and is bounded north by North Carolina and Tennessee, northeast by Savannah river,

which separates it from South Carolina, southeast by the Atlantic, south by Florida, and west by Alabama. Its superficial area is 61,500 square miles.

Physical Aspect.—This state occupies a large proportion of the great inclined plain, from which the peninsula of Florida protrudes, and down which several rivers flow into the Atlantic and the Mexican gulf. From the Atlantic border of this state, this acclivity gradually rises to an elevation of 1,200 feet above the level of the sea, without estimating the mountain ridges. Like the Carolinas, it may be divided into three zones. First, the flat sea-border, including numerous small islands; second, the sand-hill zone; and third, a hilly and partly mountainous tract, beyond the lower falls of the rivers. The soil on the islands, called *hammock* land, is very rich, producing the celebrated Sea-island cotton. The seacoast on the main land consists of a belt of salt marsh, four or five miles in width. In the rear of this margin commence the "pine barrens," which extend 60 to 90 miles from the ocean. The rivers and creeks are generally bordered with swamps, or marshes, which, at every tide, are either wholly or partially overflowed, for 15 or 20 miles from the coast. These constitute the principal rice plantations. Beyond the pine barrens the country becomes uneven, diversified with hills and mountains, of a strong rich soil. The north-western part of the state is mountainous, and abounds in beautiful scenery. The soil of Georgia, though varied, is, a large portion of it, productive. At a distance from the sea it changes from gray to red; in some

places it is gravelly, but fertile: and farther back in the country its color is gradually deepened, till it becomes what is called the "mulatto soil," consisting of black mould and reddish earth. This is succeeded in its turn by a soil that is nearly black, and very rich. In the southwest portion of the state is Okefenokee swamp, about 170 miles in circumference.

Mountains.—This state is traversed on the north by a spur of the Alleghanies, among which are Yonah and Currahee mountains. Pine mountain lies near the western boundary.

Rivers and Sounds.—The principal rivers are, the Savannah, Ogeechee, Altamaha, Satilla, Ocmulgee, Oconee, St. Mary's, Flint, Chattahoochee, Tallapoosa, and Coosa. The coast of Georgia is indented by numerous sounds and inlets, which occur at the mouths of the principal rivers.

Islands.—Along the Atlantic coast there is a chain of islands, which are separated from the main by rivers, creeks, and inlets, forming an inland navigation of more than 100 miles. The principal of these islands are, Tybee, Wassaw, Ossabaw, St. Catherine's, Sapelo, St. Simon's, Jekyll, and Cumberland.

Climate.—The climate, from the difference of elevation, is varied, one section producing wheat, and another sugar-cane. The winters are usually mild and pleasant; snow is seldom seen, nor is vegetation often interrupted by severe frosts. The temperature of winter usually fluctuates from 40° to 60° Fahrenheit, although it occasionally falls as low as 16°. In the low country, in the vicinity of swamps, fevers and bilious attacks are common, owing partly to the badness of the water, but principally to the noxious vapors which arise from stagnant water, and putrid matter in the rice swamps. In the "upper country" the air is pure and salubrious throughout the year, and the water is abundant and good.

Productive Resources.—The staple products of this state consist of horses, mules, neat cattle, sheep, swine, poultry, silk, wool, butter, cheese, cotton, tobacco, rice, sugar, wine, wheat, rye, oats, barley, potatoes, and Indian corn. Among the mineral resources are, copper, iron, and gold. The latter occurs in considerable abundance in the northern part of the state, on both sides of Chattahoochee river, as far north as the Blue Ridge.

Manufactures.—The people of Georgia are more engaged in manufactures than those of any other southern state. It has quite a number of large cotton factories, which are worked by slave labor. It has also extensive tanneries, and mills of various descriptions.

Railroads and Canals.—There are about 1,000 miles of railroad already in successful operation in Georgia, and more in process of construction. The cost of the railroads already completed in this state is over \$15,000,000. The principal canals in Georgia are, one from Savannah to the Ogeechee river, 16 miles, and another from Altamaha to Brunswick, 12 miles.

Commerce.—The foreign commerce of Georgia amounts to about \$9,000,000 annually. The coasting trade is also considerable.

Education.—The university of Georgia, founded in 1785, at Athens, is the principal literary institution in the state. There are also, the Oglethorpe university, at Medina, near Milledgeville. The Mercer university, at Penfield, the Georgia Female college, near Macon, and the Georgia medical college, at Augusta. There are about 250 academics scattered through the state, and some 1,500 primary and common schools.

Population.—In 1749, 6,000; in 1790, 82,584; in 1800, 162,686; in 1810, 252,433; in 1820, 348,989; in 1830, 516,567; in 1840, 691,392; in 1850, 905,999. Number of slaves in 1790, 29,264; in 1800, 59,404; in 1810, 105,218; in 1820, 149,656; in 1830, 217,531; in 1840, 280,944; in 1850, 381,681.

Government.—The governor is elected by the people, and holds his office two years. The senate consists of 47 members, elected from forty-four districts of two counties each, two districts of three counties each, and one district comprising but a single county. The house of representatives is composed of 130 members: the 35 counties having the largest number of inhabitants are entitled to two members each, and the remainder one each. State election biennially, first Monday in October. The legislature meets biennially, on the first Monday in November (odd years), at Milledgeville. The judges of the superior court are elected for three years by the legislature, and the judges of the inferior courts and justices of the peace are elected quadrennially by the

but the difference of relative level being small, and surrounded as it is by water on three sides, it enjoys a climate peculiar to itself. On the seaboard it is generally healthy for eight or nine months in the year, and in some parts remarkably so the whole year round. In the interior, it is quite as salubrious as it is in either of the other southern states, unless it be in the vicinity of marshes, or stagnant waters, where fevers and other epidemics invariably prevail. The winters are mild, and usually without frost, though the mercury occasionally sinks to 30° Fahrenheit, and sometimes as low as 26°; in summer, the temperature seldom exceeds 97°. The climate of the southernmost keys is truly tropical.

Productive Resources.—The staple products consist of horses, mules, neat cattle, sheep, swine, poultry, hay, wool, tobacco, cotton, wheat, oats, potatoes, oranges, sugar, molasses, and Indian corn. The forests produce an abundance of live-oak timber, cedar, and yellow pine. Turtle and other fisheries are carried on somewhat extensively among the keys. Salt is made in small quantities, and granite is quarried to some extent.

Manufactures.—Florida being mostly an agricultural state, but little attention as yet has been paid to manufactures. In 1850 there were but 121 manufacturing establishments, producing to the extent of \$500 and upward each annually.

Railroads and Canals.—The legislature of Florida has granted several charters for railroads in this state, but thus far there are neither railroads nor canals within its borders.

Commerce.—The direct foreign commerce of Florida amounts to about \$3,000,000 annually. Shipments are also extensively made through New Orleans, and the Atlantic ports. The coasting trade of Florida is also considerable. The shipping in the state amounts to about 12,000 tons.

Education.—The constitution of Florida provides for the establishment of common schools throughout the state, but thus far little progress has been made in affording facilities for elementary education. There are academies and grammar-schools in the more populous towns, but no collegiate institution.

Population.—In 1830, 34,723; in 1840, 54,477; in 1850, 87,401. Number of slaves in 1830, 15,501; in 1840, 25,717; in 1850, 39,309.

Government.—The legislative power is vested in a senate and house of representatives. The senate consists of 19 members, elected by the people, in districts, for two years. The representatives are elected by the people, by counties, biennially, their number never to exceed sixty; present number, thirty. Biennial election, first Monday in October. The executive power is vested in a governor, who is chosen by the people once in four years, and is not eligible the succeeding term. The judicial power is vested in a supreme court, having appellate jurisdiction only; also in circuit courts, the state being divided into four circuits, in each of which a judge of the supreme court has jurisdiction. The judges are elected by the legislature, at first for five years; after that term, during good behavior. There are also courts of probate. The right of suffrage may be exercised by every free white male, aged 21 years, or upward, who has resided in the state for two years, and in the county for six months, and who shall be enrolled in the militia, or be by law exempted from serving therein.

History.—The present state of Florida embraces a portion of the ancient Florida, which extended from its southernmost cape to the river Panuco, in Mexico, and westward to the Pacific, and the undefined regions on the north. It was first explored by Juan Ponce de Leon, in 1512, in search of a spring called the "fountain of youth," which was supposed to have the power of renewing the vigor of youth in the aged. In 1526, it was formally taken possession of in the name of the king of Spain, by Pamphilo de Narvaez, who had been sent out as governor. The first permanent settlements were made at St. Augustine, in 1565, and at Pensacola, in 1699; though an unsuccessful attempt had been made, by a colony of Huguenots, in 1562-'64, under Ribault. Though often invaded by the English and French, this territory remained a part of the Spanish dominions until 1763, when it was ceded to Great Britain, but restored again to Spain in 1783. From the year 1699 to 1763, the acknowledged boundary between Florida and Louisiana was the river Perdido, but when the

latter came into the possession of the Spaniards, for convenience, West Florida was extended to the Mississippi. From this circumstance arose the difficulties between Spain and the United States, on their purchase of Louisiana of the French, in 1803. In 1781, Governor Galvez, of Louisiana, invaded and conquered West Florida; but by the treaty of Paris, in 1793, it fell once more to Spain, who held it until 1798, when this portion of Florida, which was claimed as far north as Altamaha river, in Georgia, was relinquished to the United States. By virtue of their claims to that portion of Louisiana lying between the Mississippi and Perdido rivers, as held by France prior to 1763, the United States in 1811, seized Baton Rouge, and all other parts of the disputed territory west of Perdido, except Mobile, which also surrendered in 1812. After a protracted and uninterrupted negotiation, Florida was ceded to the United States, in 1819, ratified by Congress as a territory in 1821, and admitted into the Union as an independent state in 1845. Motto of the seal, "Let us alone."

FLUVANNA COUNTY, situated toward the central part of Virginia, with James river on the south, and trav-

people. All the free white male inhabitants, who shall have resided within the county in which they vote six months preceding the election, and shall have paid taxes in the state for the year previous, have the right of suffrage.

History.—The state of Georgia embraces a part of Virginia, as granted to Sir Walter Raleigh, in 1584; or a portion of South Virginia, as granted by James I., of England, in 1606. A portion of its present territory also embraces a part of the ancient Georgia colony, chartered in 1732, to a corporation "in trust for the poor," for twenty-one years, including the country between the Savannah and Altamaha rivers, extending westward from their sources to the "South sea;" also a portion of the northern part of Florida, as claimed at the time by Spain. The first permanent settlement in Georgia, was made under this grant at Savannah, by Oglethorpe, in 1732, who brought out a band of colonists, collected from among the poor and vicious population, as an experimental effort for their reformation, by providing them with the means of self-support. This benevolent design failing of success, the trustees of the colony sent out a better class of emigrants in 1735 from Scotland, Switzerland, and Germany. In the year following Oglethorpe extended his settlements as far south as St. John's river, in Florida, but was repulsed by the Spaniards. He retained his fortification at the mouth of the St. Mary's, and this river afterward became the boundary between Georgia and Florida. In the year 1752, the trustees of the colony surrendered their charter to the king, and their province was forced into a royal government. A general representative assembly was established in 1755; and in 1763, all the territory between the Altamaha and St. Mary's was annexed. In 1775, Georgia acceded to the union of the colonies, and sent deputies to Congress. When military operations were transferred to the southern states, from 1779 to 1781, Georgia became a portion of the bloody arena. It was at the siege of Savannah, Sept. 23, 1779, that Count Pulaski, the brave and patriotic Pole, was killed. In 1777, the first state constitution was adopted, and the parishes then existing were formed into counties. A second constitution was adopted in 1785, and the one now in force in 1798. In 1788, it adopted the constitution of the United States by a unanimous vote. By different conventions, all of the new states, Alabama and Mississippi, lying north of thirty-one degrees, have been yielded to the general government. Motto of the state seal of Georgia, "Constitution" supported by "Wisdom," "Justice," "Moderation," and "Agriculture and Commerce."

HARRISBURGH, the seat of justice of Dauphin co., and capital of Pa., is situated on the east bank of Susquehanna river, 97 miles northwest of Philadelphia, and 110 miles from Washington. It is a borough, built on rising ground, which subsides toward Paxton creek into a plain. From the elevation upon which the state-house stands, appears a wide and varied prospect of hills, fertile vales, and winding streams. Across the Susquehanna and the island which here divides it, extends the Harrisburgh bridge, nearly a mile in length, and not far below, the bridge of the Cumberland Valley railroad. The channels of communication, the Pennsylvania lines of railroad and canal, besides opening a way to the remote part of the state, convey to Harrisburgh the products of the neighboring fertile region, of which it is a profitable market. The Susquehanna, with its large volume of water, is not navigable, except for timber rafts, which can only descend with its swift current.

The capitol is an imposing structure, consisting of a main building and two wings, each adorned with a portico and Ionic pillars. The central edifice is 180 feet wide, 80 feet deep, and 108 feet from the ground to the top of the dome. The whole is surrounded by an open space, adorned with trees, walks, and an iron-railing. The other prominent buildings, are a Masonic-hall, two banks, a prison, and a number of churches.

By the Mount Airy water-works, water is elevated from the Susquehanna into a reservoir, on a hill above the borough, and thence is distributed through iron-pipes.

Manufactures, to a considerable extent, are produced in Harrisburgh, and the town is gradually increasing in population and wealth.

The population in 1810, was 2,287; in 1820, 2,990; in 1830, 4,311; in 1840, 6,020; in 1850, 8,173.

HART COUNTY, situated near the central part of Kentucky, and traversed by Green river. Area, 432 square miles. Face of the country level; soil unproductive, chiefly consisting of barrens. Seat of justice, Mumfordsville. Pop. in 1820, 4,184; in 1830, 5,191; in 1840, 7,031; in 1850, 9,093.

HART, t., Warwick co., Ind., 181 ms. from Indianapolis; from W. 722 ms. Pop. 1,434.

HARTFIELD, p. v., Chautauque township, Chautauque co., N. Y.

HARTFORD COUNTY, situated on the northern boundary of Connecticut, and traversed by Connecticut and Farmington rivers. Area, 727 square miles. Face of the country beautifully diversified with mountains and rich valleys; soil fertile, especially on the rivers. Seat of justice, Hartford. Pop. in 1810, 44,733; in 1820, 47,264; in 1830, 51,141; in 1840, 55,629; in 1850, 69,966.

HARTFORD, city, seat of justice of Hartford co., and state capital, together with New Haven, of Connecticut, is situated on Connecticut river, at the head of sloop navigation, 45 miles from its entrance into Long Island sound, 100 miles southwest of Boston, and 123 north-east of New York. The city is built on the west bank of the river, which rises suddenly into an elevation, and stretches away into an undulating and diversified country. Seated in the centre of the state, and in its richest region, and communicating with the whole valley of the Connecticut, from Vermont to the sound, it enjoys an extensive and valuable trade in all the manufactures and productions peculiar to New England. The plan

of the city is not very regular, but many of its buildings are elegant and beautiful for situation. On a public square stands the state-house, a fine structure of the Doric order, 116 feet long, 75 wide, and 54 high. Trinity college, an Episcopal institution, has a fine location near the city. The city-hall in the Doric, and the Athenæum of the Gothic architecture, are conspicuous edifices. But the buildings most honorable to Hartford, are the American Asylum for the education of the Deaf and Dumb, and the Retreat of the Insane. Both of these institutions are widely known, and include persons from all parts of the country. The former is situated on Tower hill, about a mile west of the city, and receives a revenue from grants made by the general government, and from other sources. The buildings of the Insane Asylum are located toward the southwest of the city, upon an eminence, in the midst of picturesque and delightful scenery, well-suited to minister to the injured mind that peace and quietude which nature can best impart. A beautiful freestone bridge spans Mill river, which winds through the city into the Connecticut, by a single arch of 100 feet, and a substantial and costly bridge connects the town with East Hartford. Perhaps the object of most universal interest in the vicinity of Hartford, is the Charter Oak, which still flourishes as in its pristine verdure, though age has robbed it of some of its limbs. It stands on a beautiful elevation south of the city. The New Haven and Hartford, the Hartford and Springfield, and the Connecticut River railroads, traverse the best part of Massachusetts and Connecticut; and sloops and steamboats ply upon the river and Long Island sound. Pop. in 1810, was 3,955; in 1820, 4,726; in 1830, 7,074; in 1840, 12,793; in 1850, 17,966.

 ILION, p. o., Herkimer co., N. Y.

ILLINOIS, sometimes called the "Prairie state," is situated between 37° and 42° 30' north latitude, and 87° 49' and 91° 30' longitude west from Greenwich; it is bounded north by Wisconsin, east by Lake Michigan and Indiana, south by the Ohio river, which separates it from Kentucky, and west by the Mississippi river,

which separates it from Missouri and Iowa. Its superficial area is 55,400 square miles.

Physical Aspect.—The general surface of this state may be regarded as a gentle plain, more or less rolling inclined in the direction of its rivers. The northern and southern sections, however, are somewhat broken, but no portion of the territory is traversed by ranges of mountains, or hills. It is estimated that Illinois contains more arable land than any other state in the Union. In that portion north of Kaskaskia river the prairie country predominates; and it is computed that two thirds of the state are covered with this class of lands. Many

portions of them are undulating, entirely dry, and abound in wholesome springs; but as a general rule, they consist of plains; and in the true meaning of the term, in French, they are "meadows," presenting every degree of fertility, down to extreme barrenness. Many of them exhibit alluvial deposits, which prove that they have once been morasses, and perhaps lakes. In numerous instances, there are thickets, or groves of timber, amid these prairies, containing from 100 to 2,000 acres each, which resemble oases in the desert, or islands in the sea. Along the borders of many of the streams are rich "bottoms," or alluvial deposits. The "American bottom" commences at the confluence of the Mississippi and Kaskaskia rivers, extending northward to the mouth of the Missouri, a distance of about eighty miles, and comprises an area of 288,000 acres. It is bounded on the east by a chain of "bluffs," some of which occur in parallel ridges, while others are of a conical shape, formed of lime-rock, from 50 to 200 feet in height.

Rivers and Lakes.—The principal rivers are, the Mississippi, which bounds the state on the west, the Ohio, which bounds it on the south, Kankakee, Kaskaskia, Sangamon, Little Wabash, Muddy, Saline, Rock, Embarras, Fox, the Wabash, the principal river in the state, which forms a portion of the eastern boundary, Des Plaines, and Vermillion. Besides Lake Michigan, which lies on the northeast corner, this state contains Peoria lake, an expansion of Illinois river.

Climate.—The climate of this state is generally healthy, and the air pure and serene, except in the vicinity of wet, low lands, or stagnant pools. The winters, which are cold, are somewhat milder than those of the Atlantic states in the same latitude. Snow seldom falls to the depth of six inches, and it as rarely remains on the ground more than ten or twelve days. The Mississippi is sometimes frozen over as far down as St. Louis, sufficiently strong to be crossed on the ice. The summers are warm, particularly in the southern part, but the intensity of the heat is modified by the breeze.

Productive Resources.—The staple products are, horses, mules, neat cattle, sheep, swine, poultry, butter, cheese, wool, cotton, hemp, flax, hops, hay, wine, wheat, barley, buckwheat, potatoes, and Indian corn. Among the mineral resources are, zinc, copper, iron, and lime. Bituminous coal may be found in nearly every county in the state. Common salt is procured by evaporating the water of salt springs. The lead mines in the vicinity of Galena are very extensive, and of great value to the state. The mineral has been found in every portion

of a tract of more than fifty miles in extent. The ore lies in beds, or horizontal strata, varying in thickness from one inch to several feet.

Manufactures.—In 1850 there were, in Illinois, 3,099 manufacturing establishments, producing each \$500 and upward annually. The manufactures consist mostly of woollen fabrics, machinery, saddlery, agricultural implements, &c.

Railroads and Canals.—There are about 1,200 miles of railroad completed and in course of construction in this state; some of them, particularly the Central railroad, are very important. The Illinois and Michigan canal, connecting the waters of Lake Erie, at Chicago, with those of the Illinois river at Peru, is one of the most important works of internal improvement in the country. It is the connecting link of an unbroken internal water communication from the Atlantic, off Sandy Hook, New York, by the way of the lakes, the Illinois and Mississippi rivers, to the gulf of Mexico. The canal is 113 miles long, 60 feet wide, and 6 feet deep, and designed for boats of 120 tons. It cost over \$8,000,000.

Commerce.—The direct foreign commerce of Illinois is, of course, from its insular position, very small; but its coasting and lake trade is important, amounting, in 1850, to over \$10,000,000.

Education.—The principal collegiate institutions in Illinois are, the Illinois college, at Jacksonville, founded in 1829; the McKendree college, at Lebanon, in 1834; the Shurtleff college, at Upper Alton, in 1835; the Knox Manual Labor college, at Galesburg, in 1837; and the College of St. Mary of the Lakes, at Chicago, in 1846. There are about 100 academies, and 2,000 common schools in the state.

Government.—The legislative authority is vested in a senate, the members of which, 25 in number, are elected for four years, one half every two years; and a house of representatives, 75 in number, elected for two years. Senators must be thirty years of age, and five years inhabitants of the state. Representatives must be twenty-five years of age, citizens of the United States, and three years inhabitants of the state. The executive power is vested in a governor and lieutenant-governor, chosen by a plurality of votes, once in four years, on the Tuesday after the first Monday in November, who must be thirty-five years of age, citizens of the United States for fourteen years, and residents of the state for ten years. The governor is not eligible for two consecutive terms. A majority of members elected to both houses may defeat the governor's veto. A majority of the members elected to each house is required for the passage of any law. The legislature meets biennially at Springfield, on the first Monday in January. The judicial power is vested in a supreme court, of three judges, elected by the people, for a term of nine years, one being chosen triennially; also in circuit courts, of one judge each, elected by the people in nine judicial circuits, into which the state is divided, for six years; and county courts, of one judge each, elected by the people for four years. All white male citizens, 21 years of age, resident in the state for one year, may vote at elections. No state bank can be created or revived. Acts creating banks must be submitted to the people. Stockholders are individually liable to the amount of their shares.

Population.—In 1810, 12,282; in 1820, 55,211; in 1830, 157,455; in 1840, 476,183; in 1850, 851,470.

History.—This state embraces a part of Upper Louisiana, as held by the French prior to 1763, when it was ceded to England, together with Canada and Acadia. The first permanent settlement was made at Kaskaskia, in 1685, although La Salle had built a fort, called Crevecoeur, on Illinois river, five years before. At the close of the revolutionary war, in 1783, this country was claimed under the charter of Virginia, and held by that state until ceded to the United States, in 1787. It was then made a part of the territory northwest of Ohio river. When Ohio was made a separate territory, in 1800, Illinois and Indiana were formed into another territory, and remained as such until 1809, when they were divided into two. In 1812, a territorial government was formed, with a legislature and one delegate to Congress. In 1818 a state constitution was formed, and Illinois admitted into the Union as an independent state. The present constitution of the state was adopted by a state convention in August, 1847, and accepted by the people in March, 1848. Motto of the seal, "State Sovereignty; National Union."

INDIANA, one of the United States, situated between 37° 45' and 41° 52' north latitude, and 84° 42' and 88° 12' longitude west from Greenwich; and is bounded north by Michigan lake and state, east by a small portion of Michigan, Ohio, and a small part of Kentucky, south-east by the Ohio river, which separates it from Kentucky, and

west by Illinois, from which it is separated in part by Wabash river. Its superficial area is 34,000 square miles.

Physical Aspect.—In features, soil, and climate, Indiana forms a connecting link between Ohio and Illinois. It is more hilly than the latter, but contains no mountains. A range of high land, called the "Knobs," extends from the falls of the Ohio to the Wabash, which in many places produces a broken surface. Bordering on all the principal streams, except the Ohio, are belts of "bottom" and prairie. Between the Wabash and Lake Michigan the country is generally level, abounding alternately in woodlands, prairies, lakes, and swamps. A range of hills runs parallel with the Ohio, from the mouth of the Great Miami to Blue river, alternately approaching to within a few rods, and receding to the distance of two miles. Immediately below Blue river the hills disappear, and the country immediately becomes level. The prairies of this state are of two kinds, the "river," and the "upland." The former are bottoms, destitute of timber; the latter are from 30 to 100 feet or more in elevation, and are far more numerous and extensive. The soil of these plains, or tablelands, are often as deep and fertile as the best bottoms. The prairies bordering on the Wabash are particularly rich, varying from two to twenty feet in depth. In truth, no state in the Union can show a greater extent of fertile land, in one body, than Indiana.

Rivers and Lakes.—The principal rivers are the

Ohio, which flows along the entire southern boundary; the Wabash, which bounds the state partly on the west; the Patoka, Tippecanoe, Eel, Salamanic, Plain, Theaki, St. Mary's, St. Joseph's, White, Whitewater, and Kankakee, a branch of the Illinois. Besides Lake Michigan, there are English and Beaver lakes, all of which lie at the northwestern part of the state.

Climate.—The climate is generally healthy, and resembles that of Ohio and Illinois. In all places situated near stagnant waters or sluggish streams, fevers and bilious attacks prevail during the hotter months of the year. The Wabash is generally closed in the winter, and may be safely crossed on the ice. In the central and southern parts of the state snow seldom falls to a greater depth than six inches; but in the northern parts it is sometimes from a foot to eighteen inches deep.

Productive Resources.—The staple productions of this state are, horses, mules, neat cattle, sheep, swine, poultry, butter, cheese, wax, furs, skins, wool, sugar, wine, hops, hay, hemp, flax, tobacco, wheat, barley, rye, buckwheat, oats, potatoes, and Indian corn. Among the mineral resources may be mentioned, iron, coal, and Epsom salts.

Manufactures.—In 1850 there were in Indiana, 4,326 manufacturing establishments, which produced \$500 and upward each annually. The total amount of manufacturing capital in the state was over \$7,000,000, having more than doubled since 1840.

Railroads and Canals.—Indiana has about 1,000 miles of railroad already completed, and in successful operation, and new lines projected. The principal canal in Indiana is the Wabash and Erie, 459 miles long, connecting the waters of Lake Erie with those of the Ohio river; next in importance is the Whitewater canal, extending from Lawrenceburg to Cambridge, 76 miles.

Commerce.—Indiana has no direct foreign commerce, its exports being shipped at the ports of other states. Its river and lake trade is considerable, and increasing.

Education.—The collegiate institutions of Indiana are, the State University, at Bloomington, founded in 1827; Hanover College, at South Hanover, in 1829; Wabash College, at Crawfordsville, in 1833; Franklin College, at Franklin, in 1837; Indiana Asbury University, in 1839; St. Gabriel's College, at Vincennes, in 1843. A law school is attached to the state university, and medical schools at Laporte and Indianapolis. There are about 100 academies and high schools in the state. The common school fund is nearly a million of dollars.

Population.—In 1800, 2,640; in 1810, 24,520, exclusive of Indians; in 1820, 147,178, in 1830, 343,031; in 1840, 685,866; in 1850, 988,416.

Government.—The legislative authority is vested in a senate and house of representatives; the senate is not to exceed 50 members, elected for four years; the representatives, not to exceed 100 in number, are chosen for two years. The executive power is vested in a governor, elected by the people for four years, but not eligible the next four years. A lieutenant-governor is also chosen in the same manner, and for the same term. The elections are held once in two years, on the second Tuesday in October. All elections by the people are by ballot, and decided by a plurality of votes; all elections by the legislature are *visa voce*. The legislature meets biennially, at Indianapolis, the first Monday in January. The judicial power is vested in a supreme court of not less than three, nor more than five judges, elected by the people at large, for a term of six years; in circuit courts, the judges of which (one in each) are elected by the people in each judicial circuit for a term of six years; and in such inferior courts as the legislature may establish. The right of suffrage extends to every white male citizen of the United States, of the age of 21 years and upward, who shall have resided in the state during the six months immediately preceding an election.

History.—This state embraces a part of the ancient territory of Upper Louisiana, as held by the French prior to 1763, when it was ceded to England, together with Canada and Acadia. The first permanent settlement was made at Vincennes, in about the year 1690. At the close of the revolutionary war, and by the treaty of 1783, the country was claimed under the charter of Virginia, and held by that state until ceded to the United States, in 1787. It was then made a part of the territory northwest of Ohio river. When Ohio was made a separate territory, in 1800, Indiana and Illinois remained united, and continued under one government

until 1809, when each became a distinct territory. In 1816 Indiana was admitted into the Union as an independent state. A new constitution was adopted in 1851.

INDIANA COUNTY, situated toward the westerly part of Pennsylvania, with Kiskiminitas river on the southwest. Area, 770 square miles. Face of the country, hilly; soil, mostly sterile. Seat of justice, Indiana. Pop. in 1810, 6,214; in 1820, 8,882; in 1830, 14,251; in 1840, 20,782; in 1850, 27,070.

INDIANAPOLIS, city, seat of justice of Marion co., and capital of Indiana, situated in the centre of the state, and on the east side of White river, in the midst of a rich and rapidly populating country, 108 miles northwest of Cincinnati, and 573 miles from Washington. Thirty years ago, a dense forest occupied the site of this city. In 1821, it became the seat of the state government, and has since continued to increase in population and prosperity. It is laid out with ingenuity and beauty. A circular street surrounds an open space, with the governor's mansion in the middle. From this diverge several streets, intersecting, diagonally, the others, which are rectangular. Besides a number of churches, mills, and factories, the city contains a splendid statehouse, 180 feet long, 85 wide, and 45 feet high, adorned by Ionic porticoes and columns, and surmounted by a dome. The courthouse is also a conspicuous edifice. White river is here spanned by an elegant bridge. The whole is an interesting specimen of industry, enterprise, and thrift, and bids fair to become one of the principal cities in the west. When high, the river is navigable to this point for steamboats. Indianapolis is connected by railroad with Madison, on the Ohio, 86 miles distant, and railways also extend toward Peru, as well as toward Bellefontaine, in Logan county, Ohio. Pop. in 1830, was about 1,200; in 1840, 2,692; in 1850, 8,090.

INDIAN TERRITORY, a vast region set apart by the United States as the permanent home of certain Indian tribes who have been removed thither, and natives of the soil, lies between 34° and 40° north latitude, and 94° 20' and 100° longitude west from Greenwich. It is bounded north by the Northwestern Territory, east by Missouri and Arkansas, south by Texas and New Mexico, and west by Texas, New Mexico, and Utah. Its superficial area is about 200,000 square miles.

Physical Aspect.—The Ozark range of mountains traverse the southwestern corner of this tract. From this point eastward the country presents a series of slightly undulating plains, gradually ascending toward the Rocky mountains, where they have an elevation of 4,000

or 5,000 feet. These mountains, forming the western boundary, rise to the elevation of 12,000 feet. The Great American desert stretches along the eastern part of the Rocky mountains, from the Northwestern territory through the Indian territory into Texas, a length of nearly 600 miles. Its width varies from 100 to 200 miles. The soil of this is arid, sterile, and almost destitute of trees, and even of shrubs. There are occasional plains and prairies, which afford subsistence to herds of bison, wild horses, and other animals. A belt of about 200 miles wide, adjoining Arkansas and Missouri, is favorable to settlement. Its soil is fertile, and it is watered by numerous rivers, none of which, however, are adapted to navigation.

Rivers.—The principal rivers are, Red river, Canadian, Arkansas, Neosho, Kansas, and Platte rivers, with their tributaries. The largest of these rivers rise in the Rocky mountains, and flow east into the Missouri and Mississippi. Red river and the Arkansas are navigable at certain seasons to within the Indian territory by steamboats, and the Kansas by boats.

Climate.—The atmosphere is salubrious, and in the southern portion the climate is so mild, that domestic animals find support through the winter without the care of their owners.

Resources.—Iron, lead, and coal, are abundant. The Indians have, in many instances, converted their settlements into well-cultivated farms, and the various grains, vegetables, and other agricultural products of corresponding latitudes east of the Mississippi, are raised in abundance.

Population.—The inhabitants of the Indian territory consist of tribes indigenous to the country, and the tribes transported thither under the authority of the United States. The numbers belonging to each class and tribe, in 1841, were as follows:—*Indigenous Tribes.*—Pawnees, 12,500; Osages, 4,102; Kansas, 1,700; Omahas, 1,301; Otoes and Missouris, 931; Puncas, 777; Quapaws, 400. *Immigrant Tribes.*—Cherokees, 25,911; Creeks, 24,594; Choctaws, 12,410; Seminoles, 3,136; Chippewas, Ottawas, &c., 2,028; Chickasaws, 4,111; Delawares, 1,059; Kickapoos, 505; Peorias and Kaskaskias, 150; Piankeshaws, 98; Senecas from Sandusky, 125; Senecas and Shawnees, 211; Shawnees, 887; Stockbridges, Munsees, &c., 278; Swan Creek, &c., 62; Weas, 176; Winnebagoes, 2,182; Wyandots of Ohio, 385. Total, 96,020.

Government.—The Cherokees, Creeks, and Choctaws, are the most advanced toward civilization of any of the foregoing tribes. They have good houses, well-fenced and well-tilled fields, and own horses and cattle to a considerable extent. They have also native mechanics and merchants. They have adopted an improved system of government. The Choctaws and Creeks have a written constitution; and the former have introduced trial by jury. The other transported tribes are said to have improved in their condition since their removal from the east. But the indigenous tribes have not, as a general thing, improved in the same degree as their brethren from the east. They still cling to their wild pleasures, and prefer the excitement of the hunt, and of war, to the peaceful monotony of civilization.

IOWA, one of the United States, formerly a portion of the Louisiana territory, situated between 40° 30' and 43° 30' north latitude, and 90° 20' and 96° 50' west longitude from Greenwich, and is bounded north by Minnesota, east by Mississippi river, which separates it from Wisconsin and Illinois, south by Missouri, and west by the

Indian territory. Its superficial area is 50,000 square miles.

Physical Aspect.—The general surface of this state is moderately undulating, without mountains or high hills, except in the northern part, where the hills are of considerable height. Along the margins of the rivers there are frequent ranges of bluffs, which vary in height from 40 to 130 feet. In other instances, the streams are skirted by rich "bottoms," covered with trees. A large proportion of the territory consists of prairies, some of which have a level, others a rolling surface. The soil on the bottoms, as well as on the prairies, is generally good, the former consisting of a deep, rich, black mould, and the latter of a sandy loam, sometimes intermingled with gravel, or red clay.

Rivers and Lakes.—The principal rivers are the Mississippi, Des Moines, Iowa, Keosauque, Little Iowa, Turkey, Shunk, Red, Cedar, Maquoketa, and Wabapi-con. At the north part of the state there are numerous small lakes.

Climate.—The climate is pleasant, and generally healthy, except near the borders of stagnant waters, or sluggish streams, where, during the summer, bilious complaints, fevers, and agues, usually prevail. Snow rarely falls to exceed eight or ten inches in depth; and the Mississippi, at Prairie du Chien, is not frozen sufficiently strong to be crossed more than five or six weeks in the year. The summers are warm, but not oppressively so, and are refreshed by frequent showers.

Productive Resources.—The staple products of this state are, horses, mules, neat cattle, sheep, swine, poultry, butter, cheese, wax, wool, hay, hemp, flax, skins, furs, sugar, tobacco, wheat, barley, rye, oats, buckwheat, potatoes, and Indian corn. Among the mineral resources are found lead, iron, copper, zinc, and coal; but lead is the most abundant, and the mines are extensively worked in the vicinity of Dubuque.

Manufactures.—The manufacturing and mechanic arts have as yet but a slight foothold in Iowa; but with its abundant water power and other resources, it undoubtedly will not remain long as now almost entirely an agricultural state.

Commerce.—From its position, lying upon the Mississippi river, with numerous navigable streams traversing its interior, Iowa possesses commercial advantages equal to those of any other western state. It contributes largely to the valuable cargoes that are floated down the Mississippi to New Orleans.

Education.—There are two collegiate institutions in

this state; the Iowa university, at Iowa City, and the Franklin college, at Franklin. The constitution makes it imperative that a school shall be established in each district. All lands granted by Congress, and other specified avails, constitute a fund to be applied to education. A special fund is also provided for the support of the state university.

Population.—In 1840, 43,111; in 1850, 192,214.

Government.—The legislative power is vested in a senate consisting of not more than one half, nor less than one third, of the number of representatives, and who are chosen for four years, one half biennially; and in a house of representatives, not less than thirty-nine, nor more than seventy-two in number, chosen for two years. The executive power is vested in a governor, chosen for four years. The judicial power is vested in a supreme court, consisting of a chief justice and two associates, elected by the legislature for six years; in district courts, the judges of which are elected by the people for five years; and in justices of the peace. Every white male citizen, twenty-one years old (idiots, insane, or infamous persons excepted), having resided in the state six months, and in the county twenty days, has the right of suffrage. State elections first Monday in August; the legislature meets biennially, first Monday in December.

History.—Iowa embraces a portion of the ancient territory of Upper Louisiana, the eastern border of which was explored by Marquette and Joliet, in 1673. It remained under the jurisdiction of France until 1763, when it was ceded to Spain. In 1800 it was retroceded to France, who formally took possession of the country, and sold the whole to the United States in 1803. Subsequently to this, Iowa constituted a part of the territory of Louisiana, and afterward of that of Missouri. Until as late as the year 1832, the whole of this territory north of Missouri, which was admitted into the Union as a state in 1821, was in undisputed possession of the Indians. By a treaty made in 1830, the Sacs and Foxes, then the principal tribes, had ceded to the United States the last of their lands east of the Mississippi. In consequence of not leaving the territory, in compliance with the treaty, arose the "Black Hawk war," which resulted in the total defeat of the Indians at the battle of Bad Ax, in Wisconsin, in 1832. In the autumn of that year a belt of country along the west side of the Mississippi, extending northward from Missouri for nearly 300 miles, and 50 miles in width, commonly known as the "Black Hawk purchase," was ceded by the Indians to the United States. In 1836-'37 further purchases were made, and in 1838 Iowa was erected into a territory. By another treaty in 1842, a tract of some 15,000,000 acres more were purchased of the Sacs and Foxes for \$1,000,000. From that time the Indian title became extinct in the whole country lying within this state, which was admitted into the Union in 1846. This state is being rapidly settled, and the tide of emigration now flowing westward will, at no distant day, make this one of the most populous states in the Union.

IOWA COUNTY, situated toward the southwesterly part of Wisconsin, with Wisconsin river on the north. Area, 1,300 square miles. Seat of justice, Mineral Point. Pop. in 1830, 1,576; in 1840, 3,978; in 1850, 5,672.

IOWA COUNTY, situated in Iowa. Area, — square miles. Seat of justice, —. Pop. in 1850, 822.

IOWA, p. o., Perry co., Ill., 149 ma. s. of Springfield; from W. 824 ma.

IOWA CITY, seat of justice of Johnson co., and capital of the state of Iowa, situated on the east bank of Iowa river, about 50 miles from its entrance into the Mississippi, and 75 miles northwest of Burlington. For romantic and agreeable scenery, as well as in some measure for commercial advantages, it is eminently worthy to be the seat of government of so flourishing a state. It is built on successive elevations, rising, like terraces, one above the other. The ground, near the river, is level and open. Above and beyond, upon two heights, run broad and beautiful avenues, and, at right angles to this, is "Iowa avenue," a magnificent street, at the head of which stands the statehouse, a splendid edifice of richly-variegated stone, called "bird's-eye marble." It is in the Grecian-Doric architecture, 60 feet wide, and 100 feet long, surmounted by a beautiful dome. There are churches, schools, stores, and all the accompaniments of civilization and prosperity in the west. The river is navigable to Iowa city for steamboats and vessels of ordinary draught, and navigation will doubtless be speedily improved by canals and other channels of

intercommunication. The population in 1840, was 800; in 1850, 1,250.

 JERSEY, p. o., Oakland co., Mich.
 JERSEY CITY, Hudson co., N. J., is situated upon a peninsula, on the west bank of the Hudson, opposite the lower extremity of New York. In the days of the Revolution it was known as Paulus Hook, and was the scene of several events interwoven in American history. Upon the neck of the peninsula, a little in advance of Bergen hill, was quite a strong fortification, which was occupied as a British outpost during a long period of the war. It was surprised, and its force made prisoners, in July, 1779, by Major Henry Lee, and a part of his legion. Here the Paterson railway, connected with the Erie; the Morris and Essex railway; the Central railway, reaching toward Easton, on the Delaware; the New Jersey railway, extending to Trenton, and connecting with routes to Philadelphia; all have a terminus. Here, also, the Morris canal terminates, after pursuing a circuitous route of 100 miles from the Delaware river. Here the Cunard British Steam Navigation Company have an extensive wharf, from which their magnificent ocean-steamers sail for Europe at regular intervals. Manufactories of various kinds are giving to Jersey city the most active prosperity, and its population, like that of all the towns near New York, is rapidly increasing. Several ferries communicate with New York. Pop. in 1830, about 1,500; in 1840, 3,072; in 1850, 6,856.

KENTUCKY, one of the United States, formerly a district of Virginia lies between 36° 30' and 39° 10' north latitude, and 80° 35' and 82° west longitude from Greenwich; and is bounded north by Ohio river, which separates it from Illinois, Indiana, and Ohio, east by Virginia, south by Tennessee, and west by Missouri. Its superficial area is 40,500 square miles.

Physical Aspect.—Kentucky lies entirely in the valley of the Ohio, and is a part of an immense inclined plain, more or less broken in its surface, descending from Cumberland mountain to the river Ohio. The Cumberland range divides this state from Virginia on the southeast. Descending from the foot of this mountain toward the northwest, to the distance of 100 miles, the country is hilly and rather mountainous. This broken section includes at least one third part of the state, and extends from Tennessee line to the river Ohio. A tract along this river, from five to twenty miles wide, is also broken and hilly, stretching through the whole length of the state. But these hills are gently rounded, and are fertile quite to their tops, having narrow valleys between them of great fertility. Along the margin of this stream there are rich alluvial bottoms, of an average width of a mile, subject to periodical inundation.

KENTUCKY

tween the hilly tract on the Ohio and the mountainous country on the Virginia line and Green river there is a tract, 100 miles long and 50 miles broad, beautifully undulating, with a black and rich soil, which has been denominated the "garden of Kentucky." The whole state below the mountains rests on a bed of limestone, in general about eight feet below the surface. The rivers have worn deep channels into this calcareous bed, forming stupendous precipices, particularly on Kentucky river, where the banks in many places are 300 feet high.

Mammoth Cave.—In the southwest part of the state, between Green and Cumberland rivers, are several wonderful caverns. The "Mammoth Cave," in Edmondson county, 130 miles from Lexington, near the road leading to Nashville, is some nine or ten miles in extent, with a great number of avenues and intricate windings. Most of these caves yield an inexhaustible supply of nitrate of lime. During the late war with Great Britain, fifty men were constantly employed in lixiviating the earth of the Mammoth cave, to obtain the saltpetre it contained; and in about three years after the washed earth is said to have become as strongly impregnated with nitric acid as at first.

Mountains.—The Cumberland range, before referred to, forms the southeast boundary of this state.

Rivers.—The principal rivers are, the Ohio, Mississippi, Tennessee, Cumberland, Kentucky (Kutawa), Green, Licking, Salt, Rolling, and Big Sandy.

Climate.—The climate through most of the state is generally healthy. The winters are mild, and usually of only two or three months' duration. Spring and autumn are delightfully pleasant. The extremes of season, however, are widened by the peculiar features of the country. The rivers in their descent have abraded the plains, and flow in deep chasms or vales, which receive the rays of the sun in various inclinations. In these situations the summers are hot, and the winters mild.

Productive Resources.—The staple products of this state are, horses, mules, neat cattle, sheep, swine, poultry, eggs, butter, cheese, wine, wax, sugar, tobacco, wool, cotton, hemp, flax, hay, lumber, wheat, barley, rye, oats, buckwheat, rice, potatoes, and Indian corn. Tobacco and hemp are the great staples of the state. Among the mineral resources are, iron, coal, salt, and lime. The salt springs are numerous, and not only supply this state, but a great part of Ohio and Tennessee, as well as other parts.

Manufactures.—About half a million of dollars is invested in cotton and woollen manufactures in Kentucky, and about \$200,000 in the manufacture of iron. Other principal manufactures are, cordage, cotton-bagging, hardware, tobacco, spirits, &c. In 1850, the number of manufacturing establishments in the state, producing \$500 and over, each, annually, was 3,471.

Railroads and Canals.—The principal railroads at present in operation in Kentucky are, the Louisville and Frankfort, 65 miles, and the Frankfort and Lexington, 29 miles. Several important railroads are projected, which, when completed, will render easily accessible all the important points in the state.

Commerce.—In common with other inland states, Kentucky has no direct foreign commerce, but ships mostly at New Orleans. The river trade of this state is considerable. About 15,000 tons of shipping is owned in the state.

Education.—There are several collegiate institutions in Kentucky; St. Joseph's, Centre, Augusta, Georgetown, and Bacon colleges; and Louisville and Transylvania universities, to both of which law and medical schools are attached. There are also a theological institution at Covington, and the Western Military college, at Blue-Lick Springs. There are also, asylums for the blind, the deaf and dumb, and the insane. The state has a school fund of \$1,300,000.

Government.—The legislative power is vested in a senate and house of representatives, which together are styled the general assembly. The senators are 38 in number, chosen by the people, from single districts, for four years. Representatives, 100 in number, are chosen by the people for two years. A governor and lieutenant-governor are elected by the people for a term of four years. The governor is ineligible the immediately succeeding term. He may return a bill passed by the legislature, but a majority of the members elected to each house may pass the bill afterward, and it then becomes a law notwithstanding his objections. The gen-

eral election first Monday in August biennially. The state officers are elected by the people for a term of four years. The judicial power is vested in a court of appeals, circuit, and county courts; the judges of each are elected by the people. Every free, white, male citizen, 21 years of age or over, resident in the state two years, and in the county where he offers to vote one year, next preceding an election, may vote at such election. Elections by the people are *vis a voce*.

Population.—In 1790, 73,077; in 1800, 220,955; in 1810, 406,511; in 1820, 564,317; in 1830, 687,917; in 1840, 779,828; in 1850, 982,405. Number of slaves in 1790, 11,830; in 1800, 40,343; in 1810, 80,561; in 1820, 126,372; in 1830, 165,213; in 1840, 182,258; in 1850, 210,981.

History.—The first permanent settlement in Kentucky was made by Daniel Boone, in 1775, though the country had been visited by John Finley, and others, as early as 1769. In 1777, the legislature of Virginia made it a county, and in 1782 a supreme court was established. In about the year 1776, the region south of Kentucky river was purchased of the Cherokees, who called their domain "Transylvania" (beyond the woods). In 1786, an act was passed by Congress, erecting the district of Kentucky into a new territory; but the separation from Virginia did not take place before 1792, when it was admitted into the Union as an independent state. The first constitution was adopted in 1790, which was superseded by a new one in 1799, and that by the present one in 1850. Motto of its seal, "United we stand, divided we fall."

LANCASTER, p. t., Erie co., N. Y., 280 ms. W. of Albany; from W. 387 ms. Watered by Ellicott, Cayuga, and Seneca creeks. Pop. 3,794.

LANCASTER, city, seat of justice of Lancaster co., Pa., is situated 36 miles southeast of Harrisburgh, and 62 miles west of Philadelphia. In 1812, the state government was transferred from this place to Harrisburgh. In the midst of the beautiful and fertile valley of Conestoga creek, it constitutes the centre of an extensive trade with the surrounding region, and a thoroughfare between Philadelphia and the west. This is one of those towns which are interesting for both age and prosperity. Some of its buildings are antiquated; others are modern; but generally all are neat and pleasant. By a series of dams and locks, forming the Conestoga canal, the navigation of the creek has been improved to the Susquehanna, a distance of 18 miles.

The manufacturing establishments are various and flourishing.

The Columbia and Philadelphia railroad communicates with Lancaster, and leads toward Harrisburgh; and here, the Westchester branch diverges toward York.

The population in 1810, was 5,405; in 1820, 6,633; in 1830, 7,704; in 1840, 8,417; in 1850, 8,811.

LEXINGTON, c. h., p. v., seat of justice of Henderson co., Tenn., 117 ms. S. W. of Nashville; from W. 801 ms. Watered by Beech river.

LEXINGTON, city, seat of justice of Fayette co., Ky., 24 ms. S. E. of Frankfort, situated on a branch of Elkhorn river, 70 miles from Louisville, and 515 from Washington. It is the oldest town in the state, and was formerly the capital. It has many handsome, paved streets, Main street being 75 feet wide, and 1½ miles in length. The noble shade-trees that border the streets, give it a pleasing appearance. A large public square adorns the centre of the place, which is surrounded by stately private mansions. The public buildings are, a courthouse, Masonic hall, jail, state lunatic asylum, and the halls of the Transylvania university, together with several churches and academies, and the hospitality and intelligence of its citizens, and render it a desirable southern residence.

The population in 1820, was 5,283; in 1830, 6,408; in 1840, 6,984; in 1850, —.

LOUISIANA, one of the United States, so called by La Salle, in 1682, in honor of his royal patron, Louis XIV., of France. It is situated between 29° and 33° north latitude, and 88° 40' and 94° 25' west longitude from Greenwich; and is bounded north by Arkansas and Mississippi, east by Mississippi, from which it is separated by Mississippi and Pearl rivers, southeast and south by the gulf of Mexico, and west by Texas, from which it is separated in part by Sabine river. Its superficial area is 46,341 square miles.

Physical Aspect.—The entire border of the state, from Pearl river to the Sabine, presents itself in a vast tract of irreclaimable sea-marsh, from 20 to 30 miles in width, extending farthest inland in the regions between the streams; for it is a singular feature, in all the rivers which flow into this part of the Mississippi, that narrow

by Mississippi and Pearl rivers, southeast and south by the gulf of Mexico, and west by Texas, from which it is separated in part by Sabine river. Its superficial area is 46,341 square miles.

Physical Aspect.—The entire border of the state, from Pearl river to the Sabine, presents itself in a vast tract of irreclaimable sea-marsh, from 20 to 30 miles in width, extending farthest inland in the regions between the streams; for it is a singular feature, in all the rivers which flow into this part of the Mississippi, that narrow

by Mississippi and Pearl rivers, southeast and south by the gulf of Mexico, and west by Texas, from which it is separated in part by Sabine river. Its superficial area is 46,341 square miles.

strips of arable land, of greater or less width, occur on their banks, extending far beyond the interior limits of the sea-marsh; none, however, retain these elevated borders to the Mexican gulf. Contiguous to the sea-marsh are vast prairies, with which the former has often been confounded, in consequence of their similarity in appearance. On the waters of the Sabine, Calcasieu, and Mermentau, the prairies have generally a thin, sterile soil, while on the Vermilion, Teche, and Cortabean, they are almost uniformly good. The alluvial banks of the rivers of Louisiana, in their natural state, are more or less subject to inundation; but in many cases, where valuable tracts are situated in the rear of the elevated strips on their borders, in order to prevent them from being overflowed, artificial embankments, or dikes, called "levees," are raised, on the margins of the streams. These arable river-borders are usually composed of a fine, loose, rich soil; but the interior plains are hard, stiff, and less fertile. In some instances, when these plains are laid dry, the soil becomes almost as hard as stone. Taken as a whole, Louisiana consists of inundated and non-inundated lands. Above the mouth of Red river, the tract liable to periodical inundation is narrow; but below that stream it widens and expands like a fan, and finally embraces the whole gulf border. All of the soil, sufficiently elevated for cultivation within the inundated region, is of superior quality. The northern part of the state has an undulating surface. Northward from the prairies of Opelousas, and westward of the inundated border near the Mississippi, lies what has been denominated the "pine region." The surface has been somewhat broken into hills, though of moderate elevation, and within the tract some snow, and even waterfalls appear. The banks of the Vermilion, which are generally fertile, are high, broken, and diversified, above the termination of the timber near the sea-marsh. The country between the Mississippi, Iberville, and Pearl rivers, is an important part of the state. The southern or level portion is highly productive of the staple crops, and the northern portion, which is undulating, has been considered as the "garden of Louisiana."

Rivers, Lakes, and Bays.—Louisiana is intersected by numerous creeks (bayous), and lakes, dividing the state into a great number of islands, or "deltas," similar in some respects to those at the mouths of the Ganges, the Nile, and the Parana. The principal rivers are, the Mississippi, Pearl, Bogue Chitto, Chifuncte, Tangipao, Tickfoha, Lafourche, Teche, Vermilion, Tensas, Red, Mermentau, Atchafalaya, Amite, New, Calcasieu, Black, Bodcau, Dacheet, Saline, Wachita, Plaquemine, and the Sabine. The principal lakes are, Ponchartrain, Maurepas, Brogne, Chetimaches, Mermentau, Calcasieu, and Sabine. The chief bays are, Vermilion, Cote, Blanche, Atchafalaya, Timballer, West, and Chandeleur.

Climate.—In the southern part of the state the climate, in summer, is hot, sultry, and unhealthy; in the northern part it is more temperate and salubrious. The winters are usually mild, though snow sometimes falls at Opelousas, from ten to twelve inches deep: such instances, however, are rare. The creeks and ponds at New Orleans are sometimes closed with ice, and snow has been known to fall sufficiently deep for sleighing.

Productive Resources.—The staple products are, cotton, sugar, molasses, tobacco and rice. This state also produces to some extent, horses, mules, neat cattle, sheep, swine, poultry, wool, hay, lumber, tar, turpentine, wheat, rye, oats, potatoes, Indian corn, wine, oranges, and figs.

Manufactures.—The manufactures of Louisiana are confined chiefly to the eastern portion of the state. In 1850 there were 1,021 manufacturing establishments producing \$500 and upward annually. The articles manufactured are principally to supply the immediate wants of the community.

Railroads and Canals.—Louisiana is so well provided with navigable channels, that little attention has been given to artificial means of internal communication. The public mind, however, has recently been awakened to the subject, and we may confidently predict that this state will ere long be traversed by iron bands, connecting New Orleans with important points within her own borders, and extending to other states. At present there are but about 50 miles of railroad and 100 miles of canal in the state.

Commerce.—The exports and imports of Louisiana are about \$50,000,000 annually. Its coasting and river

trade amounts to about double that sum. Shipping owned within the state is about 250,000 tons.

Education.—The principal collegiate institutions in Louisiana are, the St. Charles college, at Grande Coteau, founded in 1833, the Baton Rouge college, in 1838, the Franklin college, at Opelousas, in 1839, the Centenary college of Louisiana, at Jackson, in 1841, and the University of Louisiana, at New Orleans. There are about 100 academies and 300 common schools in the state.

Population.—In 1732, about 7,500; in 1810, 76,556; in 1820, 153,407; in 1830, 215,739; in 1840, 352,411; in 1850, 517,739. Number of slaves in 1800, 3,489; in 1810, 34,660; in 1820, 69,064; in 1830, 109,568; in 1840, 168,452; in 1850, 244,786.

Government.—The legislative power is vested in a senate and house of representatives. The senators, 32 in number, are elected by the people, by districts, for the term of four years, one half being chosen every two years; the representatives are elected by the people, by parishes, for a term of two years. The number of representatives can not be more than 100, nor less than 70, divided among the parishes, according to their total population, but each parish is entitled to a representative. The executive power is vested in a governor, who is elected by the people, for a term of four years, and is ineligible for the next four years. The elections are held in November, and the legislature meets biennially at Baton Rouge the third Monday in January. The judicial power is vested in a supreme court of five judges, which has appellate jurisdiction only, and such inferior courts as the legislature may establish. The chief justice is elected for ten years, and the associate judges for eight years. The right of suffrage is extended to all white males, above 21 years of age, who have resided in the state one year, and in the parish six months, next preceding the election. All citizens are disfranchized, both as to voting and holding office, who may fight, or in any way be connected with fighting, a duel, with a citizen of the state, either in or out of it. The constitution provides for the establishment of free public schools throughout the state.

History.—Louisiana embraces a part of the ancient territory bearing this name, once so comprehensive, including the entire valley of the Mississippi and its tributary streams, consisting of all the present states of Texas, Louisiana, Alabama, Mississippi, Tennessee, Kentucky, Ohio, Indiana, Michigan, Wisconsin, Minnesota, Illinois, Iowa, Missouri, Arkansas, and California, a portion of Mexico, North Carolina, Virginia, and Pennsylvania, and all the undefined regions between the Rio del Norte and the northern sources of the Mississippi, extending westward to the Pacific. It also constitutes a portion of Florida, as named by Ponce de Leon, in 1512. The first permanent settlement in the present Louisiana was made at New Orleans, in 1718, by the emigrants of the "Mississippi Company," under the auspices of John Law, who received a royal grant the year before of a complete monopoly of the trade and mines of the territory of twenty-seven years. In 1732, for the want of success, this company surrendered its chartered rights to Louisiana, and the control of its commerce reverted to the king. In 1763, France was compelled to cede to England, not only Canada and Acadia, but all of Louisiana east of the Mississippi, as far south as the river D'Iberville, and thence all their territory north and east of a line running along that stream and Amite river, through Lakes Maurepas and Ponchartrain, to the Mexican gulf. The same year she formed a treaty with Spain, surrendering the remaining portion of Louisiana, not ceded to England, and thus deprived herself of all her possessions on the continent of North America. In 1800, it was retroceded to France by a secret treaty, who formally took possession of the country, in 1803, and immediately sold it to the United States for \$15,000,000. In the meantime the Revolution had occurred, and all the former territory of Louisiana, lying east of the Mississippi, which had been ceded to England in 1763, had also become a part of the Union. By an act of Congress, in 1804, Louisiana was definitely subdivided; the northern part, above latitude 31°, was called "The Territory of Mississippi," and the lower division, "The Territory of Orleans." In 1811, the latter was authorized to form a constitution of government, which, together with that portion of West Florida west of Pearl river, was formally received into the Union, in 1812, under the name of Louisiana, as a sovereign state. Subsequently to this other lands were annexed to this state, until it received

its present bounds. The original constitution was revised in 1845, and a new one adopted in 1852. Motto of the seal, "Union and Confidence."

LOUISVILLE, city, the seat of justice of Jefferson co., Ky., the commercial metropolis of the western states. is situated on the Ohio river, at the head of uninterrupted steamboat navigation, except when the river is high. Here the Ohio descends by rapids over a limestone ledge, forming a barrier to navigation, which is now surmounted by a canal from below the city to a point above the falls. From the water, the ground rises gently and with undulations, affording a fine site, and a magnificent and varied prospect of the river and its islands, forming rapids, pleasant villages, and fertile shores. The city is intersected by broad and pleasant streets, parallel with the river, crossed at right angles by other streets and alleys. Beargrass creek, passing through the upper part of the town, falls into the Ohio, above the rapids, and is spanned by bridges. The public buildings are numerous, and commensurate with the importance and prosperity of Louisville, including banks, churches, hospitals, jails, a city-hall, and court-house, medical institute, and other benevolent, scientific, and educational establishments.

The Medical Institute at Louisville, is a very important institution, founded in 1837, with six professors, and about two hundred and fifty students. The Kentucky Historical Society, has a considerable library with numerous manuscripts.

This city may be regarded as one of the great magazines for provisions in the west. It is the market of a vast agricultural region, extending through Kentucky, Ohio, Indiana, and Illinois, and trades extensively with the whole valleys of the Mississippi and the Ohio. Manufactures of numerous kinds are also prosecuted with great enterprise and success. It is supplied by an aqueduct with pure and abundant water, and is brilliantly illuminated with gas.

Louisville is the terminus of the Lexington and Ohio railroad, and the port of a large number of steamboats from New Orleans, St. Louis, and other places in the great valley of the west.

The population 1778, was 30; in 1800, 600; in 1810, 1,357; in 1820, 4,012; in 1830, 10,352; in 1840, 21,210; in 1850, 43,194.

LOWELL, city, the seat of justice, together with Cambridge and Concord, of Middlesex co., Mass., is situated at the confluence of Concord and Merrimac rivers, 25 miles northwest of Boston. From an insignificant village, in 1822, it has sprung up into a wealthy and populous city, celebrated over the world for its unrivalled manufactories of cotton and woollen fabrics, by which it has gained the title of the "Manchester of America." The secret of its prosperity lies in the vast water-power, which enterprise and skill have turned into available channels. By a canal which connects the Merrimac below Pawtucket falls, with Concord river, water is conveyed to the town, and distributed to the various factories. About thirty are employed in the manufacture of cotton; a number of others produce woollen fabrics of various kinds, as carpets, broadcloths, cassimeres, calicoes, machinery for railroads, &c. About \$20,000,000 are invested in these operations. Lowell is pleasantly situated, and is laid out with broad streets, and the inhabitants are distinguished for industry and good morals. The operatives in the factories, are far above the ignorance and degradation which belong to those similarly employed in other countries. The "Lowell Offering," a periodical composed of communications from the young women of the "mills," is an instance of the truth of this remark. The principal public buildings are the court-house, city-hall, mechanics' hall (the latter of which is devoted to literary and scientific intelligence, and furnished with a museum and library), and the public schools, which receive a very liberal support. Lowell is connected with Boston by the Middlesex canal, and by railroad; there is also railroad communication with all the principal towns of the surrounding country. The population in 1822, 100 or less; in 1830, 6,474; in 1840, 20,796; in 1850, 27,436.

MADISON, c. h., p. v., seat of justice of Madison co., Flor.

MADISON, c. h., p. v., seat of justice of Dane co., and capital of Wis. It occupies a delightful position on a strip of land between Third and Fourth lakes, two of a chain of four beautiful sheets of water, not far apart, and connected by streams. It is 90 miles w. of Milwaukee; from W. 847 ms. From the former lake, the shore rises abruptly 50 feet, and, gradually, 20 feet

higher. Upon this elevation stands the statehouse, a prominent structure of stone, in the centre of a large park, which overlooks an enchanting panorama of lakes, lawns, groves, hills, vales, and winding streams. Toward Fourth lake, the ground again descends with different degrees of steepness, the whole distance from one shore to the other being about three fourths of a mile. The university of Wisconsin is delightfully situated upon an eminence, 125 feet above the lakes. The beauty and healthfulness of location, central position, business, and political advantages of Madison, are elements of permanent prosperity, if not of rapid progress, and it bids fair to become one of the largest towns in the state. Pop. in 1840, 376; in 1850, 1,871.

MAINE, one of the United States, lying on its northeastern border, so called from *Maine*, a department of France, of which Henrietta Maria, queen of England, was proprietor. It lies between 43° 5' and 47° 20' north latitude, and 66° 49' and 71° 4' west longitude from Greenwich, and is bounded north by

Canada East, from which it is separated by the river St. John's, east by New Brunswick, from which it is separated in part by the St. Croix, south by the Atlantic, west by New Hampshire, from which it is separated in part by Piscataqua and Salmon Falls rivers, and northwest by Canada East. Superficial area, 32,628 square miles.

Physical Aspect.—On the seaboard the surface is generally level, though not very fertile. Some ten or twenty miles back the soil is sandy, gravelly, clayey, or loamy, seldom very rich, but tolerably fertile in some places, though oftener poor. In the tract lying north of this, extending from fifty to ninety miles from the sea, the same kinds of soil are found, but generally more fertile. The surface rises into large swells of generally good soil, between which, along the margins of the streams, are frequently rich "intervales," or alluvial lands; while in other places sandy or gravelly pine plains occur, or spruce or cedar swamps. In the central parts of the state, the surface is more broken; and in many of the river valleys the soil is not exceeded in fertility in any of the other New England states. At the extreme north the country is less hilly, and is but little settled.

Mountains.—On the western side of the state, a little to the eastward of the White mountains, in New Hampshire, an irregular chain of high lands commences and extends northeastwardly, more or less interrupted, to the easterly boundary of the state, terminating at an isolated peak, 1,683 feet in height, called Mars hill. Katahdin mountain, which may be considered as a part of the above-named range, is much the highest land in the state, being 5,335 feet above the level of the sea. Agamenticus, which is of considerable elevation, is in York, near the southwest corner of the state.

Rivers, Lakes, and Bays.—The principal rivers are the Penobscot, Kennebec, Androscoggin, Saco, Sheepscot, Damariscotta, Machias, Salmon Falls, Piscataqua, St. Croix, and the St. John's. The lakes, or ponds, are rather numerous, the most noted of which are Moosehead, Umbagog, Sebago, Schoodic, Chesuncook, Pemadumcook, and Mooselogmagantic. The principal bays are Casco, Penobscot, Frenchman's, Englishman's, Machias, and Passamaquoddy.

Islands.—The chief islands are Mount Desert, Deer, Long, Boon, Fox, and Cranberry.

Climate.—Although the climate is subject to great extremes of heat and cold, the air in all parts of the state is salubrious and pure. Near the ocean and bays, the heats of summer are greatly tempered by the breezes; and the rigors of winter, though severe, are more uniform and less trying to health than in many situations farther south. The range of the temperature varies from 100° Fahrenheit to 27° below zero. Snow often lies upon the ground from four to five months in the year.

Productive Resources.—The principal products of the state are horses, neat cattle, sheep, swine, poultry, wool, butter, cheese, sugar, hay, wheat, rye, barley, oats, potatoes, and Indian corn. Among the other resources are lime, lumber, ice, and fish.

Manufactures.—There are about twenty cotton, and double that number of woollen factories in the state. Ship-building is also extensively carried on.

Railroads and Canals.—The railroads already com-

pleted in Maine are of essential value to the interests of the state. They extend about 500 miles, and connect Portland, the commercial capital, with important points in Maine, and with Boston and Montreal. The only canal in this state is the Cumberland and Oxford canal, connecting Portland with Sebago pond, 20 miles, and by a lock in Sago river, navigation is extended to Long pond, 31 miles farther. It cost about \$250,000.

Commerce.—The commerce and navigation of this state are mostly confined to coasting and fishing. Its principal exports are lumber, stone, lime, fish, prepared meats, &c. Its commerce with foreign states, in 1850, amounted to about two and a half millions of dollars; and the shipping owned within the state to somewhat over half a million of tons.

Education.—The common schools in Maine are supported by the districts in which they are located. They number over 5,000. The principal collegiate institutions are Bowdoin college, at Brunswick, to which is attached a medical school, and Waterville college, at Waterville. There are theological seminaries at Bangor and Redfield, and upward of 100 academies in various parts of the state.

Population.—In 1790, 96,540; in 1800, 151,719; in 1810, 228,705; in 1820, 298,335; in 1830, 399,955; in 1840, 501,796; in 1850, 583,188.

Government is vested in a governor, senate, and house of representatives, who are elected annually on the 2d Monday in September. The senate can not be less than 20, nor exceed 31 members; the house of representatives can not be less than 100, nor exceed 200 members. Seven councillors are elected by the legislature, to advise the governor in his executive duties. The judicial power is vested in a supreme judicial court, and such other courts as the legislature may establish. Judges are appointed by the governor, and hold their offices during good behavior, or until seventy years of age. The right of suffrage is vested in every male citizen, 21 years of age (except paupers, persons under guardianship, and Indians not taxed), who shall have resided three months in the state next preceding an election.

History.—This state embraces a part of New France, as named by Verrazanni, in 1524; or a portion of Acadia, as granted to De Monts in 1603; or a part of North Virginia, or the Plymouth Company, as claimed by the English in 1606; or, more recently, a part of the territory of the "Council of Plymouth," chartered in 1620. In 1622, a grant was made to Ferdinand Gorges and John Mason, of all the country between Merrimack and Kennebec rivers, extending interior to the lakes and rivers of New France, or Canadas, which they called "Laconia." In 1629, that portion of this tract lying between the Merrimack and Piscataqua, extending sixty miles from the sea, was conveyed to Mason alone, and then first received the name of "New Hampshire." In 1633, Gorges obtained a royal charter, constituting him lord proprietor of the province; but, from his stately scheme of government, the people became dissatisfied, and sought protection of Massachusetts, who took them under her jurisdiction in 1652, and called it the county of Yorkshire. In 1677 she purchased the claims of the heirs of Gorges, as to both jurisdiction and soil. In 1686 Sir Edmund Andros was appointed royal governor over all New England. Plymouth, Massachusetts, New Hampshire, and Rhode Island, immediately submitted to his jurisdiction. A few months after Connecticut was added, and in 1688 his power was further extended over New York, and New Jersey. In 1691, Plymouth, Massachusetts, Maine, Acadia, or Nova Scotia, were formed into one royal colony, under Governor Phipps, upon which Plymouth lost her separate government, contrary to her wishes; while New Hampshire, then under the protection of Massachusetts, was forcibly severed from her. Massachusetts obtained a confirmation of her charter, and, through long disputes with the Indians and the French, those additions to her territory were maintained under her jurisdiction until she became an independent state. The first settlement made in Maine was by the "Sagadahock colony," which consisted of one hundred planters, under the command of George Popham. They landed at the mouth of the Kennebec, in 1607 (thirteen years before the settlement of Plymouth), at the place now called Hill's Point, Phippsburg, and erected a few cabins, a storehouse, and some slight fortifications, naming their plantation "St. George." Seventy-five of the number were left to pass the winter, who lost their storehouse by fire, and their president by death; and the year following they

Scale of Miles
10 20 30 40

MAINE

abandoned the enterprise, and returned to England. The first permanent settlement was in Bristol, as early as 1630. Maine, from its first corporation, was a district of Plymouth, or Massachusetts, and was usually called the "province or district of Maine." Although it had long been sufficiently populous to become a state, and efforts had been made for that purpose, in 1785-'86, and in 1802, it was not admitted into the Union before 1820, when it became a sovereign state. The motto of its seal is *Dixit*, "I direct," having reference to the north star on the crest of the coat-of-arms, which is a directing point to the mariner; it also implies that this state was the northernmost member of the confederation at the time of its admission.

MARYLAND, one of the United States, named in honor of Henrietta Maria, queen of Charles I., and daughter of Henry IV., of France. It is situated between 38° and 39° 43' north latitude and 75° 10' and 79° 20' west longitude, from Greenwich, and is bounded north by Pennsylvania and Delaware; east by Delaware and

the Atlantic; south by Virginia and Chesapeake bay, and southwest and west by Virginia, from which it is separated in part by the Potomac. Its superficial area is 13,959 square miles.

Physical Aspect.—This state may be said to embrace the three great zones of soil, alluvial, hilly, and mountainous. In the counties on the eastern side of the Chesapeake, with the exception of a small part of the northern extremity, is an extensive plain, low and sandy, and much intersected by rivers and creeks, having but few springs, and abounding, in many places, with stagnant pools. The land in this portion of the peninsula is of much better quality than in the Delaware part. The country, on the western shore of the Chesapeake, below the falls of the rivers, is similar to that on the eastern side. Above the falls the surface becomes gradually uneven and hilly, and in the western part of the state it is mountainous. There is much good soil existing in every section of the state; but the most productive in grain and fruits are some of the limestone tracts in the western counties.

Mountains.—Several branches of the Alleghany chain cross the state from Pennsylvania to Virginia, the principal of which are, North mountain, South mountain, Warrior's, Sugar-loaf, Savage, Will's mountains, and Sidling hill.

Rivers and Bays.—The principal rivers are, the Potomac, Susquehanna, Patuxent, Elk, Sassafras, Chester, Choptank, Nanticoke, Pokomoke, St. Mary's, and the Severn. Chesapeake bay runs through the state from north to south, dividing it into two parts. The part east of the bay is called the "Eastern Shore," and the portion adjoining the bay on the west is called the "Western Shore." Sinepuxent bay lies near the Atlantic coast, and is connected to the ocean by an inlet of the same name.

Climate.—In the eastern part of the state the climate in summer is moist, sultry, and disagreeable, and the inhabitants are subject to agues, intermittents, and bilious attacks; but in the western regions, toward Virginia, where the land is more elevated, the climate is agreeable and highly salubrious.

Productive Resources.—The chief products are, horses, mules, neat cattle, sheep, swine, poultry, butter, cheese, sugar, wax, hops, tobacco, wool, cotton, silk, hemp, flax, hay, wheat, rye, oats, barley, buckwheat, potatoes, and Indian corn. Among the mineral resources are, bog iron ore, bituminous coal, porcelain and other clays, red and yellow ochre, chrome ores, alum earth, and coppers.

Manufactures.—In manufactures, Maryland occupies a respectable position. Numerous woollen and cotton mills, copper and iron-rolling mills, are established near Baltimore, and also scattered over other parts of the state. Silk, flax, and mixed goods, are also manufactured to a considerable extent. Tanneries are numerous, and ship-building is carried on extensively. The flour of Maryland is considered second to none in the market. The capital invested in manufactures is about \$12,000,000.

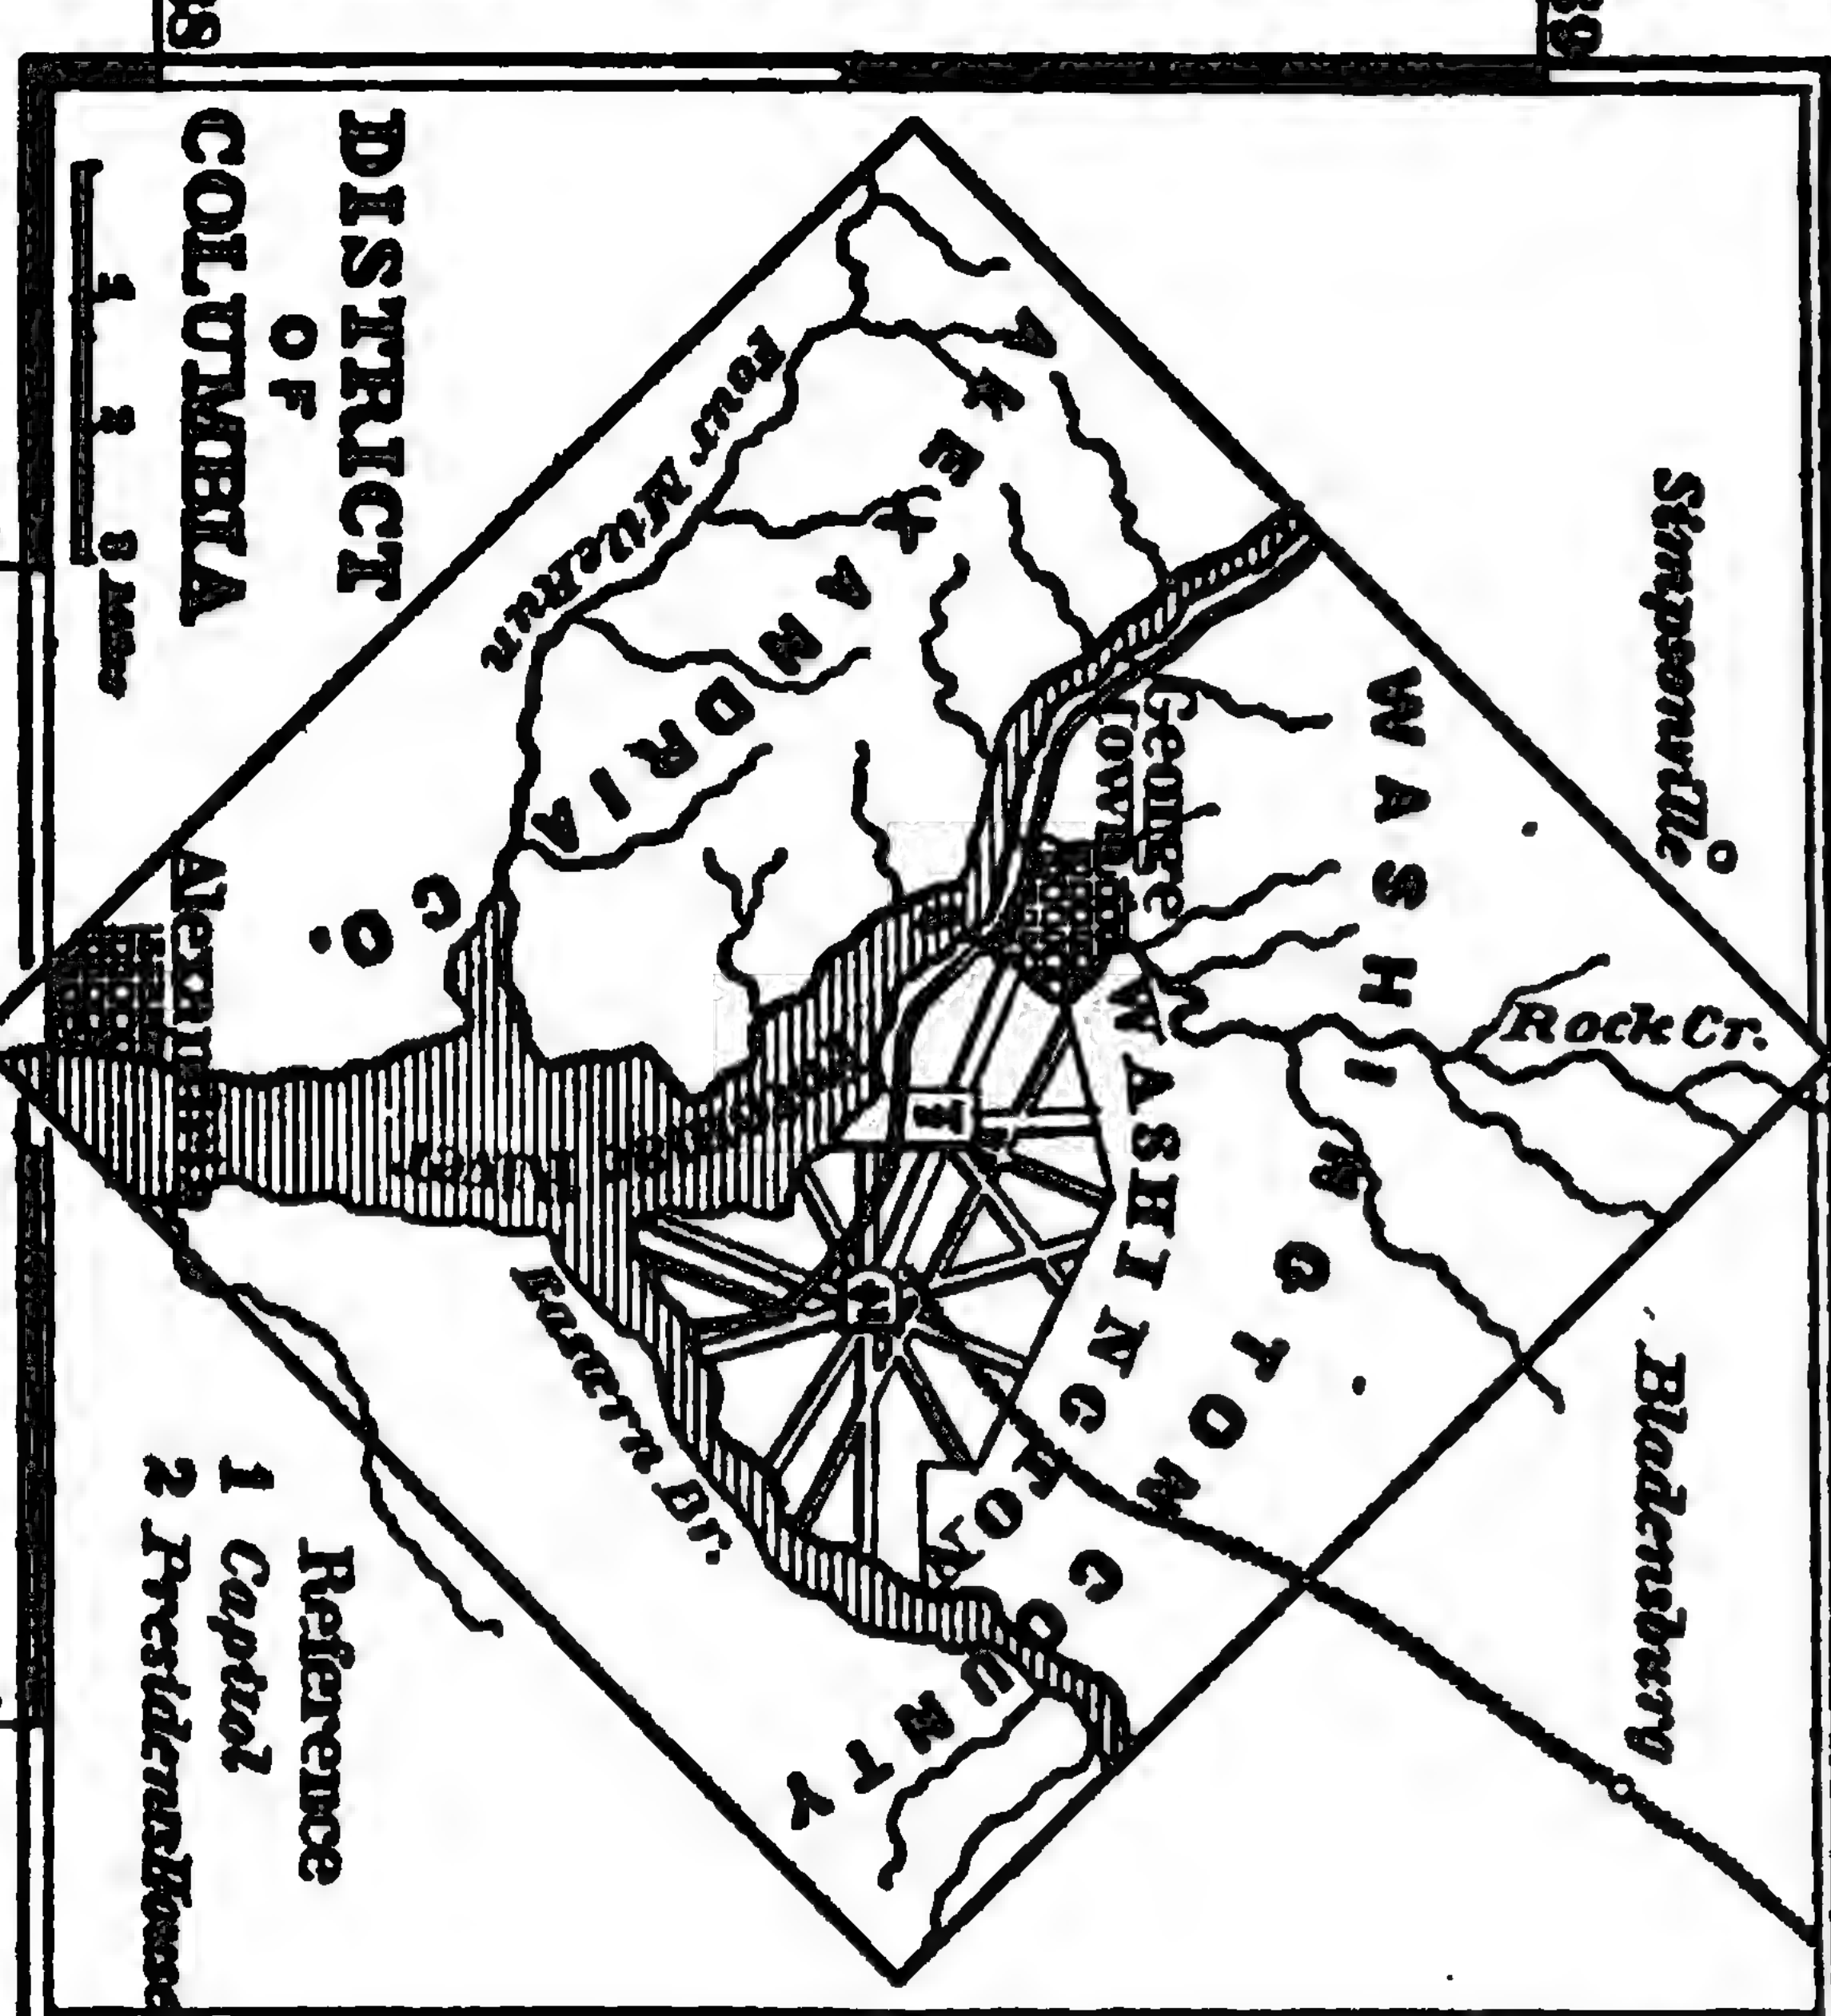

Railroads and Canals.—The great chain of southern railroads traverses this state. The Baltimore and Ohio railroad, extending from Baltimore to Wheeling, 178 miles, is a magnificent work. Other lines intersect the state in different directions. The Chesapeake and Ohio canal, from Georgetown, D. C., to Cumberland, 184 miles long, lies mostly in this state. It is intended to continue it to Pittsburgh, Pa., 340 miles.

Commerce.—The imports and exports of Maryland are about \$14,000,000 annually. The shipping owned within the state is about 2,000,000 tons, about one half of which is engaged in the coasting trade.

Education.—There are several colleges in Maryland. Washington college, at Chestertown, founded in 1783, is the oldest; St. John's college, at Annapolis, founded in 1784, is next. Besides these are, the University of Maryland, and the St. Mary's, both of Baltimore; Mount St. Mary's, at Emmitsburg, and St. James, near Hagerstown. There are two medical schools at Baltimore. There are besides, in the state, about 200 academies and grammar-schools, and 800 common schools.

Population.—In 1790, 319,728; in 1800, 341,548; in 1810, 380,546; in 1820, 407,350; in 1830, 447,040; in 1840, 469,232; in 1850, 583,035. Number of slaves in 1790, 103,036; in 1800, 105,635; in 1810, 111,502; in 1820, 107,398; in 1830, 102,294; in 1840, 89,737; in 1850, 90,368.

Government.—The legislative power is vested in a

Longitude West from Washington 0
38

senate, and a house of delegates. The senators are elected by the people for a term of four years, one half of them being chosen biennially. One senator is chosen from each county, and one from the city of Baltimore; making the present number of senators twenty-two. The members of the house of delegates are elected by the people once in two years, and until the apportionment to be made under the census of 1860, are seventy-two in number. The executive power is vested in a governor, who is chosen by the people, for a term of four years. The state is divided into three districts, and the governor is taken from each of the three districts alternately. The judicial power is vested in a court of appeals, in circuit courts, courts for the city of Baltimore, and in justices of the peace, all elected by the people. The judges of the court of appeals, four in number, and the circuit judges, eight in number, are chosen for ten years. The general election is held on the first Wednesday in November, biennially. The constitution conveys the right of suffrage on every free white male citizen, of 21 years of age, having resided one year in the state, and six months in the county in which he offers to vote. Imprisonment for debt, and lotteries, are now prohibited.

History.—In 1632, Charles I. granted to Sir George Calvert (Lord Baltimore) the whole territory extending from the Potomac to the fortieth degree of north latitude, comprising not only all the present states of Maryland and Delaware, but a part of Pennsylvania and New Jersey. Though involved in a controversy for many years, respecting their common boundaries, Maryland and Pennsylvania did not fix upon their existing limits before the year 1762, when they were determined by actual survey by two eminent English engineers, Charles Mason and Jeremiah Dixon, and hence the present boundary between these two states is called "Mason and Dixon's line." The first permanent settlement within the limits of Maryland was made on the island of Kent, by William Claiborne, in 1632. A few months later, the grant was made to Lord Baltimore, and his brother, Leonard Calvert, proceeded to the Potomac, in 1634, with one hundred emigrants, mostly Catholics, and formed a settlement at St. Mary's, where the first legislative assembly convened, in 1635. In 1774, a provincial Congress took the government into its own hands. It joined the confederacy in 1776, and adopted the federal constitution in 1788. In 1790, that portion of the state now constituting the District of Columbia, was ceded to the general government. Maryland formed her constitution in 1776, which was subjected to numerous amendments till 1851, when a new one was framed by a state convention, and adopted by the people. The motto of the seal is, "Industry the means, and plenty the result."

MASSACHUSETTS, situated on the southerly boundary of Illinois, with Ohio river on the south. Area, — square miles. Seat of justice, Metropolis. Pop. in 1850, 4,092.

MASSACHUSETTS, one of the United States, so-called from a tribe of Indians, formerly at Barnstable, or from *Massachuset*, the aboriginal name of Blue Hill, a few miles s. of Boston. It lies between 41° 23' and 42° 52' north latitude, and 69° 50' and 73° 30' west longitude from Greenwich; and is bound-

ed north by Vermont and New Hampshire; east by the Atlantic; south by Rhode Island and Connecticut; and west by New York. Its superficial area is 7,500 square miles.

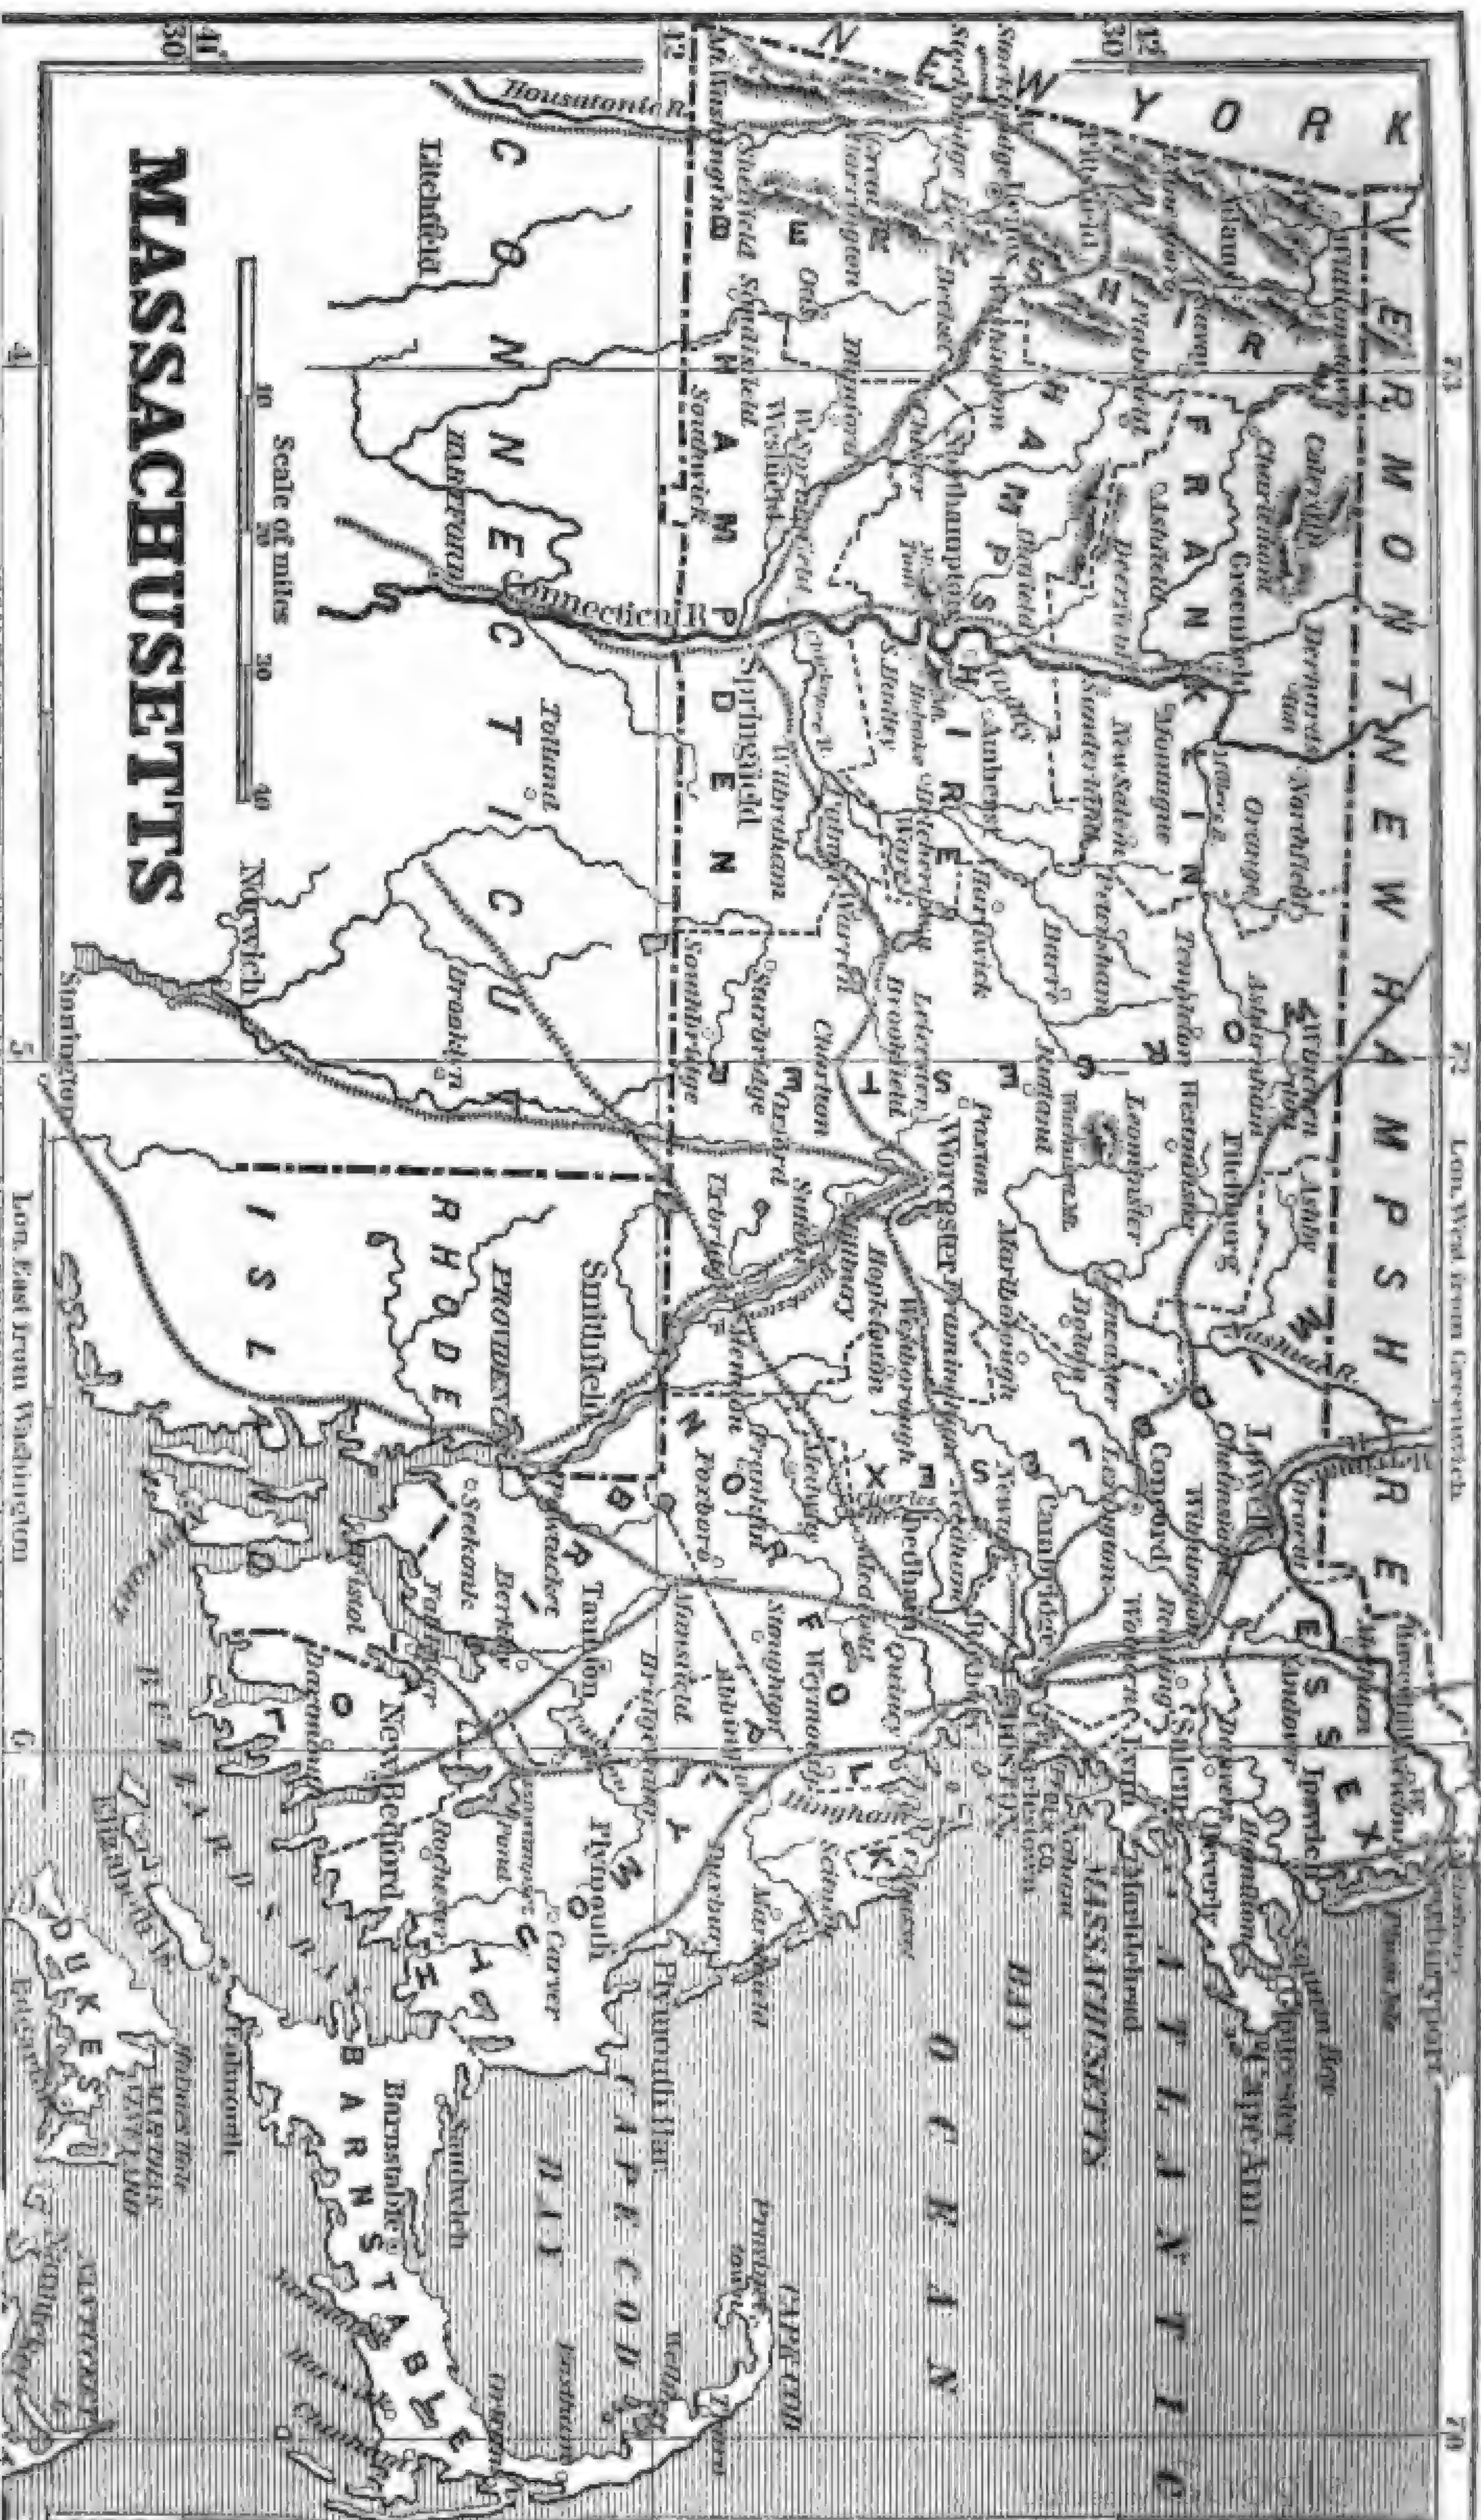

Physical Aspect.—The surface of this state is greatly diversified, and the soil may be divided into three distinct zones—mountainous in the western, hilly in the central and northern, and level in the southeastern sections. Salt marshes are numerous on most of the maritime border. The soil is exceedingly varied. In the southeastern part it is mostly light and sandy; interspersed, however, with numerous spots that are fertile. In the middle and northern sections, particularly toward the seaboard, it is of much better quality, but distinguished more for its superior cultivation, than its natural fertility. The more western parts, especially in the valley of the Connecticut river, have generally a strong, rich soil, excellent for grazing, and suited to most of the purposes of farming.

Mountains.—The Green mountain range passes through the western part of the state, from north to south. The principal chain takes the name of Hoosac mountains, the highest summits of which are the Saddle and Taghkanic. The other elevations, noted for their size and height, are Wachusett, Mount Tom, Mount Holyoke, Mount Toby, Blue and Pow-Wow hills.

Rivers and Bays.—The principal rivers are the Connecticut, Merrimack, Concord, Nashua, Pow-Wow, Ipswich, North, Saugus, Charles, Mystic, Neponset, Taunton, Chickapee, Deerfield, Westfield, French, Miller's, and the Housatonic. Massachusetts bay lies on the easterly side of the state, between Capes Cod and Ann.

MASSACHUSETTS

Scale of miles
10 20 30 40

Numerous other bays indent the coast, the principal of which are, Buzzard's, Barnstable, Plymouth, and Cape Cod.

Islands.—The most noted of these are, Nantucket, Martha's Vineyard, the Elizabeth islands (sixteen in number), Plum island, and those in Massachusetts bay.

Climate.—The climate is generally favorable to health, though persons with feeble lungs, living near the seaboard, are liable to suffer from the ocean winds. The air from the interior is generally dry, serene, and salubrious. The summers are pleasant, but subject to excessive heat, often followed by a depression of temperature, of 50° Fahrenheit in a few hours. The winters are generally rigorous, the thermometer often standing below zero.

Products Resources.—The principal products are horses, mules, neat cattle, sheep, swine, poultry, eggs, butter, cheese, silk, wool, hay, fish, spermaceti, whale and other fish oil, wheat, rye, barley, oats, buckwheat, potatoes, orchard and garden fruits, and Indian corn. Among the fossil resources are marble, granite, freestone, slate, flagstone, and various kinds of ochre and clay. This state abounds in mines of iron ore, and has also some coal.

Manufactures.—Massachusetts is distinguished as a manufacturing state. Water-power for the supply of machinery is abundant in nearly every section of the state. There are five or six hundred cotton and woolen factories. Calico-printing and carpet-weaving are also largely carried on. Boots and shoes, leather, wrought and cast iron, straw hats, cabinet-work, paper, and oil, are extensively manufactured. Fire-arms are also manufactured at the national armory at Springfield.

Railroads and Canals.—Massachusetts has a greater number of railroads, in proportion to its area, than any other state in the Union. There are, within the limits of the state, about forty different roads, exclusive of their various branches, with a total length of over 1,200 miles, and built at an aggregate cost of rising \$50,000,000. Their principal centres are Boston, Worcester, Springfield, Lowell, and Fitchburgh. The principal canals of Massachusetts are, the Middlesex, 27 miles long, connecting the Merrimack river at Lowell with Boston harbor; the Blackstone, 45 miles long, from Worcester to Providence; and the Hampshire and Hampden, 22 miles long, from the Farmington canal (now disused), on the Connecticut line, to Northampton.

Commerce.—The commerce of Massachusetts centres chiefly at Boston, and is inferior only to that of two other states (New York and Louisiana) in the Union. Its exports and imports in 1850 were over forty millions of dollars. Amount of shipping owned within the state, 685,442 tons.

Education.—The university of Cambridge is the oldest and best-endowed school in the United States; attached to it are schools of law, medicine, divinity, and science. Williams' college, at Williamstown, and Amherst college, are also flourishing institutions. At Andover, Newton, and Worcester, theological seminaries are established. Academies and common schools exist throughout the state.

Population.—In 1790, 378,717; in 1800, 423,245; in 1810, 472,040; in 1820, 523,287; in 1830, 610,408; in 1840, 737,699; in 1850, 994,499. Number of slaves in 1778, 18,000. Slavery was abolished in 1781.

Government.—The executive power is vested in a governor, lieutenant-governor, and council; and the legislative power, in a senate of forty members, and a house of representatives; all elected annually, by the people, on the second Monday in November, excepting the council, which is chosen by the legislature. The judiciary is vested in a supreme court, court of common pleas, and such other courts as the legislature may establish. The judges are appointed by the governor, and hold their offices during good behavior. The right of suffrage is enjoyed by every male citizen, twenty-one years of age (excepting paupers, and persons under guardianship), who has resided in the state one year, and in the election district six months, and shall have paid a state or county tax (or been exempted therefrom) two years next preceding any election.

History.—The coasts of Massachusetts, after Cabot and Cartier's voyages, were annually visited for trade with the natives, and for fishing, yet little was known of the interior, until Captain Smith, the hero of Virginia, explored its shores from the Penobscot to Cape Cod, and penetrated its interminable forests. It was Smith who gave that whole country the name of New

England. That region was not permanently settled until 1620, when a party of 101 Independents, who had fled from England to Holland, in 1608, in consequence of persecutions, obtained a grant of land from the Virginia Company, intending to settle within their jurisdiction. But through accident or treachery, they reached the coast within the jurisdiction of the Plymouth Company,* from whom they subsequently obtained a patent. The great moral spectacle which this little company of emigrants presented, can not be passed unnoticed. Deprived of the privilege of worshipping God according to the dictates of their own consciences and judgments, they left England, with their pastor, John Robinson, and became voluntary exiles in Holland. They cherished the sentiment, however, "England, with all thy faults, I love thee still," and they felt a yearning to live where they might retain their language and laws in their purity and strength. They therefore turned their thoughts toward the wilds of America, where no restraining power should interfere with their religious privileges; and obtaining a grant from the London or Virginia Company, they left Delft Haven, in Holland, in August 1, 1620, in the *Speedwell*. They were joined at Southampton, England, by the *May-Flower*, bearing a number of business men of London, who had formed a partnership with those from Holland. The *Speedwell*, however, proved unseaworthy, and the whole company, numbering in men, women, and children, as before remarked, 101 souls, sailed from Plymouth in the *May-Flower* on the 16th of September. They reached the American coast, and descried the bleak hills of Cape Cod, on the 19th of November. For a month they laid at anchor, and in the meanwhile they entered into a solemn political compact, and chose John Carver their governor for the first year. Exploring parties were sent ashore to find a good place for settlement; and on the 21st of December the harbor of Plymouth was sounded, and found fit for shipping, and the shore well-watered and wooded, and there they landed, and commenced a settlement. They named the place New Plymouth, and soon afterward obtained a charter. In 1628, the Plymouth council granted to a number of non-conformists, of Devonshire, the territory of New England, lying between the Merrimack and Charles rivers, and three miles beyond, and extending to the South sea. A company of planters, with their families, were sent out, and founded the town of Salem. In 1629, the patentees obtained a charter from Charles I., confirming the grant of the council, and incorporating them under the name of the Governor and Company of Massachusetts Bay. Subsequently to this period, other grants and accessions were made, and the colony of Massachusetts extended its jurisdiction over the present state of Rhode Island, a part of Connecticut, New Hampshire, Maine, and Acadia. In 1641, the settlements of New Hampshire were incorporated with Massachusetts. In 1643, the four colonies, Massachusetts, Plymouth, Connecticut, and New Haven, entered into articles of confederation, under the title of the "United Colonies of New England." In 1652, Maine placed itself under the protection of Massachusetts, called the county of "Yorkshire," and remained a part of her territory, with some modifications, until it became a sovereign state. In 1686, the charter government of Massachusetts Bay was taken from her, and a president placed over the dominion from Narraganset bay to Nova Scotia. The same year, Sir Edmund Andros arrived at Boston, with a commission as royal governor of all New England. Plymouth, Massachusetts, New Hampshire, and Rhode Island, immediately submitted to his jurisdiction. A few months after, Connecticut was added, and in 1688, his power was further extended over New Jersey and New York. In 1689, Plymouth was united to Massachusetts by royal order, and its old charter confirmed. In 1691, Plymouth, Massachusetts, Maine, and Acadia, were formed into one royal colony, under the name of "Massachusetts." In 1699, New Hampshire and Mas-

* In 1606, James the First of England, claiming all the territory lying between the latitude of Cape Fear on the south, and of Halifax on the north, divided it into two nearly equal districts. One, extending from the 41st to the 46th degree, he called North Virginia; the other, extending from the 34th to the 38th degree, he called South Virginia. On the 20th day of April, 1606, he issued a charter to a "company of knights, gentlemen, and merchants," of the west of England, called the Plymouth Company, granting to them the right of settlement of the territory of North Virginia. At the same time a similar charter was granted to like persons residing in London, and called the London Company for the settlement of South Virginia. It was stipulated that neither should form a settlement within a hundred miles of the other.

sachusetts were placed under the jurisdiction of New York, but were again reunited in 1702, and thus continued until 1741, when a final separation took place. In conformity to the original grant of the Plymouth Company, Massachusetts claimed an indefinite extent of country westward, which was adjusted with New York, by ceding all her territory west of a line, running north and south, one mile east of Geneva, and was known as the "Genesee Country." In 1776, on the declaration of independence, Massachusetts formed a state constitution, which went into operation in 1780, and, with the exception of the amendment in 1820, is the same as the one of the present day. In 1778, it ratified the constitution of the United States. The motto of the seal is, *Ense petit placidam sub libertate quietem*—"By his sword he seeks the calm repose of liberty."

MICHIGAN, one of the United States, consisting of two distinct peninsulas, and is situated between 41° 48' and 47° 30' north latitude, and 82° 20' and 90° 10' longitude west from Greenwich. Michigan proper, or the lower peninsula, is bounded north by the straits of Mackinaw, which separate it from the upper peninsula, northeast by Lake Huron, which separates

it from Canada West, east by Lake Huron, the river St. Clair, Lake St. Clair, the river Detroit and Lake Erie, which separate it from Canada West, south by Ohio and Indiana, and west by Lake Michigan, and contains 39,856 square miles. The upper peninsula, which is annexed to Michigan proper, merely for the temporary purposes of civil government, is bounded north by Lake Superior; easterly by St. Mary's river, which separates it from Canada West, southerly by Wisconsin, Lakes Michigan and Huron, and Mackinaw straits, and contains 20,664 square miles; making the total superficial area 60,520 square miles.

Physical Aspect.—The surface of Michigan proper is less varied than any other section of equal extent in the United States. The dividing ridge, or table land, which separates the sources of the Great Miami and Maumee from those of the Wabash, is continued in a northerly direction across the lower peninsula, dividing it into two inclined plains, more or less rolling, one sloping toward Lake Michigan on the west, and the other toward Lakes Huron, St. Clair, and Erie, on the east. This table-land is interspersed with marshes and small lakes, from which issue the head branches of the principal streams. Small prairies occur from the banks of the St. Joseph's to Lake St. Clair, the soil of some of which is excellent, while that of others is sandy, sterile, or wet; but a greater portion of the country is covered with dense forests, the soil of which is well adapted to the production of most kinds of northern farm-crops. The trans-peninsula, or northern division, is diversified by mountains, hills, valleys, and plains. A range of high lands runs nearly throughout the length of the peninsula, rising gradually from the shores of Lakes Michigan and Superior toward its summit. The surface in the region of Keweenaw point is broken and rolling, and some of the hills are elevated nearly 900 feet above the level of the lake. From its high latitude and sterile character, this division of the state does not promise much to agriculture; though there are many fertile tracts, particularly in the prairies on the eastern part of this peninsula, as well as in the valleys, which are highly productive, when cultivated with appropriate crops. Isle Royale presents a broken and rugged outline on its coast, and is deeply indented by long and narrow inlets and bays. About one fourth of this island is sandstone and conglomerate rock. The remainder consists of trap-rock, which lies in ridges from 300 to 500 feet in height above the lake, and extending in a broken line throughout the isle.

Mountains.—Porcupine mountains, which form the dividing ridge between Lakes Superior and Michigan, toward the western boundary of the state, are represented to be elevated from 1,800 to 2,000 feet above the lake.

Rivers, Lakes, and Bays.—The principal rivers of the lower peninsula are, the Raisin, Rouge, Detroit, Clinton, Black, or Delude, St. Clair, Saginaw, Thunder Bay, Sheboygan, St. Joseph's, Kalamazoo, Grand, Marame, Barbice, White, Rocky, Beauvais, St. Nicholas, Marguerite, Manistee, Au Sable, or Sandy, Aux Betises, Belle, Tittibawassee, Grand Traverse, Aux Carpe, Mackegon, Flint, and the Pentwater. The chief rivers of the upper peninsula are, the Ontonagon, Huron, Monomonee, Dead, Montreal, St. Mary's, Eagle, Cedar, White Fish, Black, Sturgeon, Rapid, and the Manistee. The principal lakes are, Superior, Michigan, Erie, Huron, St. Clair, Long, Houghton, and Michigamme. The chief bays are, Green, Saginaw, Thunder, Great and Little Traverse, Tah-quame-naw, and Keewauwona.

Islands.—Grand, Isle Royale, Sugar, Drummond's, Cockburn, Mackinaw, Boisblanc, Great and Little Beaver, Garden, and Hog.

Climate.—The climate of Michigan is generally regarded as healthy, though near the lakes, swamps, and turbid streams, intermittents prevail to some extent in summer and fall. The seasons of the lower peninsula somewhat resemble those of western Pennsylvania, Wisconsin, and Canada West. In the northern peninsula the climate is colder and more severe. Lake St. Clair is usually frozen from December till March.

Productive Resources.—The chief productions are, horses, mules, neat cattle, sheep, swine, poultry, eggs, butter, cheese, fish, sugar, wax, hops, hay, tobacco, wool, hemp, wheat, rye, barley, oats, buckwheat, potatoes, Indian corn, and lumber. Among the mineral resources are rich veins of iron ore, in inexhaustible quantities, in the district of country extending from Dead river to the Menomonee. But what is more val-

uable, and of great importance to this country, are the rich veins of copper, blended more or less with silver, which occur at Keweenaw Point, Eagle River, Isle Royale, and other parts of the upper peninsula. Many of these mines have been opened to a considerable extent, and have been sufficiently proved to show that they may be advantageously wrought for centuries to come. From one of the veins of the Copper Falls mines a single mass of native copper has been taken, which weighed 30 tons. It was perfectly pure, and as dense as the best hammered copper of commerce, showing its perfect fineness. These ores frequently contain a sufficient quantity of silver to be of commercial value. To show the extent to which these veins are susceptible of being wrought, it may be stated that a single mine annually sends to market nearly 1,000 tons of ore, that will contain 60 per cent. of pure copper. In another instance masses of pure copper, of large size, weighing some thousands of pounds, have been obtained from an ancient ravine, that had been gullied out by the floods. In the same ravine large pieces of silver also were found.

Manufactures.—The manufactures of Michigan are confined mostly to supplying the immediate wants of the people. Saw, planing, and grist mills are numerous, as also tanneries, &c. The number of manufacturing establishments in the state, in 1850, whose annual product amounted in value to \$500 and upward, was 1,979.

Railroads.—Michigan has several important railroads, which traverse the state. Among them are, the Central railroad, from Detroit to Chicago, 281 miles long, and the Southern, from Monroe to Chicago, 247 miles. The aggregate length of railroads in operation in the state is about 500 miles.

Commerce.—Situated as Michigan is, on the four great lakes of Huron, Superior, Michigan, and Erie (furnishing a continuous water communication of nearly 1,000 miles, navigable for vessels, and the opening of a canal around the falls of St. Mary, will add about 400 miles to this, through Lake Superior), it possesses superior advantages for an extensive commerce. Its foreign trade is confined to the British provinces. But its coasting trade is large—its exports from the single port of Detroit, amounting to over \$4,000,000 in value annually. An immense traffic is carried on in lumber, consisting of pine, walnut, maple, and white-wood, with the eastern and southern states.

Education.—The University of Michigan, at Ann Arbor, founded in 1837, and the St. Philip's college, near Detroit, founded in 1839, are the principal collegiate institutions in Michigan. There are about 3,000 common schools throughout the state.

Population.—In 1810, within the four districts of Detroit, Erie, Huron, and Mackinaw, was 4,762; in 1820, 8,896. In 1830, the whole population of the territory was 31,639; in 1840, 212,276; in 1850, 397,654.

Government.—The legislative power is vested in a senate of 32 members, and a house of representatives, of not less than 64, nor more than 100 members, elected by the people, for two years, by single districts. The executive power is vested in a governor, and lieutenant-governor, elected by the people, for a term of two years. The general election is held on the Tuesday succeeding the first Monday in November, biennially. At each general election a secretary of state, superintendent of public instruction, treasurer, commissioner of the land-office, an auditor-general, and an attorney-general, are chosen by the people at large, for a term of two years. The county officers are also chosen every two years. The judicial power is vested in a supreme court, circuit courts, probate courts, and in justices of the peace. The judges of the several circuit courts are to be judges of the supreme court, for the term of six years, thereafter, and until the legislature otherwise provide. The right of suffrage is held by every white male citizen above the age of twenty-one years, every white male inhabitant residing in the state on the first of January, 1850, who has declared his intention to become a citizen of the United States six months preceding an election, or who has resided in the state two years and six months, and declared his intention as aforesaid, who has resided in the state two months, and in the township or ward in which he offers to vote ten days next preceding such election. Slavery and imprisonment for debt are prohibited. The personal property of debtors, under \$500, and every homestead not exceeding forty acres of land, and occupied dwelling, not exceeding \$1,500, are ex-

empt from sale on execution, or any other final process from a court, for any debt contracted after the adoption of this constitution.

History.—Among the earlier settlements of this state were Fort Ponchartrain, at Detroit, in about the year 1600; the Jesuit mission on the island of Mackinaw, by Marquette, in 1685; and Fort Miami, at the mouth of St. Joseph's river, by La Salle, in 1678. Michigan remained as a portion of the British possessions in North America until the treaty of Grenville, in 1795. The year following it was ceded to the United States; and in 1800 it was annexed to the "Territory Northwest of the River Ohio." In 1802, Ohio was detached and formed into an independent state; but a territorial government was not established in Michigan before the year 1805. In 1812 it was invaded by the British, but was retaken by the Americans the next year. In 1835 a constitution was formed, and in 1837 it was admitted into the Union as an independent state. The present constitution of the state was adopted by a convention at Lansing, August 15, 1850, and ratified by the people in November of that year. Mottoes of the seal, *E pluribus unum*: "Many in one." *Tuebor*: "I will defend." *Si quis præinsulam americanam circumspice*: "If thou seest a beautiful peninsula, behold it here."

MILLEDGEVILLE, city, seat of justice of Baldwin co., and capital of the state of Georgia, situated at the head of steamboat navigation on Oconee river, and is 300 miles from the sea; from W. 648 ma. The city is built on elevated and somewhat uneven ground, in the midst of a rich and populous cotton-producing region, and is laid out with broad streets and pleasant squares. The statehouse is a fine edifice of Gothic architecture, surmounted by a cupola, and containing in its halls portraits of General Oglethorpe and other eminent men of early times. Among the other prominent buildings, are banks, a market-house, governor's house, state arsenal, and churches. A bridge extends to the west bank of the river. Pop. in 1810, 1,256; in 1820, — in 1830, 1,599; in 1840, 2,095; in 1850, 2,216.

 MILWAUKEE COUNTY, situated on the east boundary of Wisconsin, on Lake Michigan, and traversed by Milwaukee river. Area, — square miles. Seat of justice, Milwaukee. Pop. in 1840, 5,605; in 1850, 31,010.
 MILWAUKEE, the chief city of Wisconsin, and next to Chicago, the largest on Lake Michigan, is situated in Milwaukee co., finely located for commerce, on both sides of Milwaukee river, at its entrance into the lake, 90 miles north of Chicago, 90 miles east of Madison, and 805 miles from Washington. It is the market of a large part of the productions of the state. Steamboats and other vessels, navigating Lake Michigan, touch here, on their way to and from Detroit and points on Lake Erie, and the St. Lawrence, Erie, and Welland canals. The surrounding region is rich, and rapidly increasing in an industrious and enterprising population, of which Milwaukee is the nucleus and the centre of trade. This city is remarkable for the peculiarly bright straw-color and excellent quality of its bricks, for which the rich clay-beds along the lake afford abundant material. Besides the large quantities of these which are exported, they are used for the majority of the buildings, some of which, in large and uniform rows of dwellings or stores, present a beautiful and splendid effect. Here are churches, a jail, courthouse, and other prominent edifices.
 The Milwaukee and Mississippi railroad is completed to Palmyra, 43 miles westward.
 The population in 1840, was 1,700; in 1850, 20,026.

MINNESOTA TERRITORY, so-called from the Indian name of the St. Peter's river, the principal local stream of the country. The Indians living on its banks called it thus on account of the different appearance of the waters from those of the Mississippi. At the junction of the two streams, the waters of the last-named river may be observed generally tinged of a chocolate color, derived from the extensive tamarac and pine swamps toward the north, in which it partly has its head-springs; while the waters of the Minnesota are entirely different in appearance, being light-colored and clear. The name is compounded of two words, *minna*, "water," *sotah*, "sky-colored." This poetical designation, "The territory of the sky-colored water," receives additional ornament in the Dakotah name, bestowed on the junction of the river with the Mississippi, that of *Mendota*, or "Mingling of the waters." This is also the appellation of the Indian trading town at the mouth.

This territory lies between 43° 30' and 49° north latitude, and 89° 30' and 102° 12' longitude west from Greenwich; and is bounded north by the British possessions, east by Lake Superior and Wisconsin, from which it is separated in part by the Mississippi, south by the Iowa, and west by Nebraska, from which it is separated in part by the Missouri. Its superficial area is 93,000 square miles.

Physical Aspect.—One of the most remarkable features in the face of this country is its general monotony. It contains no mountains nor mountain chains, nor any very lofty hills; but presents a dreary void of extensive prairies, interspersed by innumerable lakes, which give rise to various streams. Some elevations indeed there are, toward the sources of the larger rivers, and even there are a few hills that might be dignified, by way of contrast, with the title of mountains, sometimes rising abruptly amidst the prairies like an island in the sea. At many points along the Mississippi the banks are high, broken, and precipitous, yet there are many cases where they gradually slope to the water. In general the prairie region is less hilly and rocky than that of the forest; and in situations where they are not too wet, they appear to be adapted for similar agricultural purposes as those in the same latitudes in Wisconsin and Michigan. The lands about Lake Pepin, in their general aspect, are suited for general crops, and for dairies, stock-raising, &c., they are seldom surpassed.

Rivers, Lakes, and Bay.—The chief rivers are, the Mississippi, Missouri, St. Peter's or Minnesota, James or Jacques, Wases or Vermilion, Tchankasudata or

Sioux, Hokah or Root, Crow, Crow-Wing, North Red, White Earth, East Swan, St. Louis, Turtle, Elk, Sac and Pine. The lakes are numerous, among the largest, of which are, Mink Salgaigoning or Mille Lac, Winibigoshish, Leech, Kadikomeg, Gayashk, Morrah Tanka, Pepin, and Superior. Fond du Lac bay, at the south-west corner of Lake Superior, borders on this territory.

Climate.—The climate of this territory, notwithstanding its northern position, is more favorable than the northern portions of New England and New York. Its winters, it is true, are severe and long, with continued deep snows for several months, and the lakes and streams strongly bound in ice; but during the growing season vegetation springs up like magic, and puts forward with astonishing rapidity and luxuriance. The spring and autumn are usually mild, and are less liable to destructive frosts, than those of the more eastern or northern states.

Productive Resources.—The agricultural products of this territory are similar to those of Wisconsin. At present the chief resources are, furs, lumber, and fish.

Population.—The population in 1850 was 6,077.

Government.—The government of Minnesota is that usually applied to territories of the United States. All citizens of adult age are voters, and elect a territorial legislature. The governor, secretary of state, and judges of the supreme and other courts, are appointed by the president of the United States. Among the important acts of the first territorial legislature, are those establishing a judiciary, a school system, dividing the territory into suitable civil districts, and appointing officers to enforce the laws, and relative to the improvement of roads. All these will have a paramount influence over the future destiny of the country. Perhaps one of the most humane and politic acts of the legislature is, the admission to citizenship of "all persons of a mixture of white and Indian blood, who shall have adopted the habits and customs of civilized men;" and not less politic is that law which requires the establishment of schools throughout the territory. The act of the general government organizing the territory, appropriates two sections of land in every township for the support of common schools. No other territory or state in the Union has received more than one section in each township for such purpose. The capital of Minnesota is St. Paul's.

History.—The territory of Minnesota embraces a portion of Upper Louisiana, as held by the French, prior to the year 1762, when it was ceded to Spain, together with the remainder of her possessions in North America. It was first explored by Hennipen, in 1680, who ascended the Mississippi beyond the Falls of St. Anthony. In 1800, it was ceded to France by a secret treaty, who formally took possession of the country in 1803, and immediately after it was sold to the United States. Subsequent to this Minnesota constituted a part of the Missouri territory, which was supposed to contain all the Mississippi to the "South sea," except a portion of the present state of Louisiana. Still later, Wisconsin and Iowa territories were erected, from portions of which this new territory was organized by act of Congress, in 1849. Earl Selkirk commenced a settlement on Red river, near the mouth of the Pembina, in 1812.

MISSISSIPPI, one of the United States, situated between 30° 10' and 35° north latitude, and 88° 10' and 91° 35' west longitude from Greenwich; and is bounded north by Tennessee, east by Alabama, south by the gulf of Mexico and Louisiana, and west by Pearl and Mississippi rivers, the latter of which separates this state from Louisiana

and Arkansas, and the former separates it from Louisiana. Its superficial area is 47,157 square miles.

Physical Aspect.—The surface of the southern portions of this state, for 100 miles inland from the Mexican gulf, is even, with occasional hills of moderate elevation, interspersed with prairies, inundated marshes, and cypress swamps. The soil is generally sandy and gravelly, mingled more or less with clay, and is capable of producing all the crops peculiar to the south. The central and northern parts of the state are more elevated, and the face of the country agreeably diversified by hills and dales. The soil is exceedingly fertile, producing abundant crops.

Rivers and Bays.—The principal rivers are, the Mississippi, Pearl, Pascagoula, Yazoo, Tombigbee, and the Big Black. The only bays are, the Pascagoula, Biloxi, and St. Louis, which lie contiguous to the Mexican gulf.

Climate.—The winters of Mississippi, as compared with the winters at the north, may be regarded as mild; but, like those of the adjoining states, they vary from each other, and not unfrequently are quite severe. No winter passes without more or less frost, and few, in some parts of the state, without snow. Neither the sugar-cane nor the orange will grow, unprotected, north of latitude 31°. In general the winters along the Mississippi are two or three degrees colder than in corresponding parallels on the Atlantic. The summers are usually very hot, subject to long droughts, and not unfrequently to excessive and protracted rains. Like most other southern countries, this state is generally healthy, except in the vicinity of swamps, and sluggish streams, where in summer and autumn, fevers and bilious complaints frequently prevail.

Productive Resources.—The products of this state are, horses, mules, neat cattle, sheep, swine, poultry, wax, wool, lumber, tar, pitch, turpentine, cotton, tobacco, rice, wheat, rye, barley, oats, potatoes, and Indian corn. Cotton is the great staple, little regard being had to other crops.

Manufactures.—But little attention is paid in this state to manufactures, beyond supplying some of the more immediate wants of the people. In 1850 there were 866 manufacturing establishments, whose annual products amounted to \$500 and upward.

Railroads.—There are about 200 miles of railroad completed in Mississippi, and others are projected. The Vicksburg, Jackson, and Brandon road, 60 miles long, is the most important road as yet built. Another road, from Natchez to Jackson, the capital of the state, is in progress.

Commerce.—Mississippi has no direct foreign commerce, its shipping to foreign countries being made through the ports of neighboring states.

Education.—The principal collegiate institutions of Mississippi are, the Oakland college, founded in 1830; the Centenary college, in 1841; and the Mississippi university, at Oxford, founded in 1846. There are also about 100 academies and 500 common schools in the state.

Population.—In 1800, 8,850; in 1810, 40,352; in 1820, 75,448; in 1830, 136,621; in 1840, 375,651; in 1850, 606,535. Number of slaves in 1800, 3,489; in 1810, 17,028; in 1820, 32,814; in 1830, 65,659; in 1840, 195,211; in 1850, 309,898.

Government.—The governor is elected by the people for a term of two years, and can not hold office more than four years out of six; and in case of his death, resignation, or other inability, it is provided, that the president of the senate shall perform the duties of governor, until another shall be duly qualified. The senate is composed of 32 members, elected for four years, half of the number being chosen biennially. The represen-

tatives are elected biennially, on the first Monday in November; the present number is 98, and can not exceed 100 members. The legislature meets biennially at Jackson, on the first Monday in January. The judicial power is vested in a high court of errors and appeals, consisting of three judges, chosen by the people for six years, one being chosen biennially; in a circuit court, held in each county, the judges chosen by the people for four years; in a superior court of chancery, the chancellor chosen by the people of the whole state for six years; in a court of probate, the judge elected by the people of each county for two years. Every free white male citizen of the United States, 21 years of age, and who has resided in the state one year next preceding the election, and four months in the county, city, or town, in which he offers his vote, is deemed a qualified voter.

History.—De Soto traversed the Mississippi region in 1542, but made no settlement. La Salle visited it in 1681, having proceeded down the great valley from the lakes of the north. In 1698, D'Iberville, who was appointed governor of Louisiana, arrived with a colony, chiefly Canadians, and settled on Ship island. The next year he built Fort Biloxi, on the eastern side of Biloxi bay, which became the headquarters of the province. D'Iberville gave the name of Rosalie to the spot now called Natchez. That settlement was surprised and destroyed by the Natchez Indians, in 1729. The French were avenged, and destroyed or dispersed the whole tribe. The northern part of Mississippi was ceded to England by France, in 1763. The southern portion was ceded to England by Spain, and attached to Florida. A portion was retroceded to Spain in 1783. A large portion of the present state was erected into a territory in 1798. The Alabama territory was separated from it in 1817, and toward the close of that year Mississippi was admitted into the Union. The first constitution was adopted in 1817, and revised in 1832.

MISSISSIPPI COUNTY, situated on the easterly boundary of Arkansas, with Mississippi river on the east, and the St. Francis on the west, and traversed by Whitewater river. Area, 1,000 square miles. Seat of justice, Osceola. Pop. in 1840, 1,410; in 1850, 2,368.

MISSISSIPPI COUNTY, situated on the southeasterly part of Missouri, with Mississippi river on the east. Area, — square miles. Seat of justice, Charleston. Pop. in 1850, 3,123.

MISSISSIPPI, t. Scott co., Mo.

MISSOURI, one of the U. States, which embraces a part of Upper Louisiana, as held by the French prior to 1763, when it was ceded to Spain, together with all her North American territory. It is situated between 36° 30' and 40° 30' north latitude, 89° 20' and 96° west longitude from Greenwich; and is bounded north by Iowa,

east by Illinois and Kentucky, from which it is separated by the Mississippi, and south by Arkansas, and west by Arkansas, the Indian Territory, and Nebraska, from a part of the latter of which it is separated by the river Missouri, whence it derives its name. Its superficial area is 67,380 square miles.

Physical Aspect.—This state presents a great variety of soil, as well as of surface; but, taking it as a whole, it is hilly, and in many parts broken and even mountainous. Starting from a point opposite the mouth of the Kaskaskias, and extending southwesterly, there is a vast ridge, rising into rocky elevations, which divides the country into two unequal slopes. The southeastern angle of the state is level, a large portion of which is annually inundated. The western counties are divided into prairies and forests, and much of the soil is good. North of the Missouri the surface is somewhat diversified, presenting a fair proportion of woodlands, prairies, and other arable soil. The lands bordering on the Missouri are exceedingly rich and fertile, often consisting of strata of dark-colored alluvion, of ad-

MISSOURI

Scale of miles
10 30 50 70

known depth, but more frequently mixed with sand. In receding from the river, the land in general is gradual in its ascent, but sometimes rises abruptly into elevated barren, flinty ridges, and limestone cliffs. The land of this state may be regarded either as fertile or very poor, there being but little soil of an intermediate quality; it is either bottom land, or cliff; prairie, or barren; sterile ridges, or sloping woodlands.

Mountains.—The state is traversed by many ridges of the Ozark mountains, which have a breadth of from 100 to 150 miles; but although they often shoot up into precipitous peaks, it is believed they rarely exceed 2,000 feet in height. In St. Francois county exists the celebrated Iron mountain, which has an elevation of 350 feet above the level of the surrounding plain, is a mile and a half across its summit, and yields 80 per cent. of pure metal. Five miles south is another pyramidal mountain of oxide of iron, known as the Pilot Knob, 300 feet high, with a base of a mile and a half in circumference. This pyramid also yields 80 per cent. of pure metal.

Rivers and Lakes.—The principal rivers are, the Mississippi, Missouri, Osage, Salt, Gasconade, Chariton, Marmac, St. Francis, Whitewater, Wachita, Big Black, and Des Moines. In the southeast part of the state are several lakes, the most noted of which are Pemisco, St. Mary's, and Nic Carny.

Climate.—The climate is remarkably dry, pure, and serene; and remote from the streams and inundated lands it is healthy, but is subject to great extremes of heat and cold. The Mississippi is usually frozen, and passable on the ice, by the first of January. The extremes of temperature vary from 100° Fahrenheit to 8° below zero.

Productive Resources.—The principal products of this state are horses, mules, neat cattle, sheep, swine, poultry, sugar, wax, wool, hay, tobacco, cotton, hemp, flax, lumber, wheat, rye, barley, buckwheat, potatoes, oats, and Indian corn. The mineral wealth of Missouri, particularly lead, iron, and bituminous coal, may be regarded as inexhaustible. The counties of Washington, Madison, St. Francois, Jefferson, and St. Genevieve, embrace what is called the "mineral tract." The lead mines have been worked from the time of the first settlement of the country, and produce ores of the richest kind, yielding, in some instances, more than 80 per cent. of pure metal. In addition to the above-named substances, there is found in this state zinc, copper, manganese, antimony, calamine, cobalt, ochres, common salt, nitre, plumbago, burr-stone, free-stone, gypsum, and marble.

Manufactures.—The manufactures of Missouri are comparatively of small account. The number of establishments in 1850, in which goods were manufactured to the annual amount of \$500 worth or upward each, were 3,030, and of these nearly one half were located in the city and county of St. Louis.

Commerce.—The commerce of Missouri consists mostly of its river-trade, its foreign commerce being of very trifling account. The shipping owned within the state (being mostly steamboats) amounts to about 30,000 tons.

Education.—There are several collegiate institutions in Missouri: the Masonic college, in Marion county, founded in 1831; University of St. Louis, in 1832; St. Charles college, in 1837; Missouri university, at Columbia, in 1840; St. Vincent's college, at Cape Girardeau, in 1843; and Fayette college, in 1846. Medical schools are attached to the two universities. There are nearly 2,000 common schools, and about 100 academies in the state.

Population.—In 1810, 19,833; in 1820, 68,586; in 1830, 140,074; in 1840, 383,702; in 1850, 682,044. Number of slaves in 1810, 3,011; in 1820, 10,222; in 1830, 24,990; in 1840, 58,240; in 1850, 87,422.

Government.—The governor is elected by the people for four years, but is ineligible for the succeeding four years. A lieutenant-governor is chosen at the same time, and for the same term, who is president of the senate. Every county is entitled to send one representative, but the whole number can never exceed 100, and are elected for two years. The senators are elected every four years, one half retiring every second year; and their number can never be less than 14, nor more than 33, chosen by districts, and apportioned according to the number of free white inhabitants. The elections are held biennially, in August. The legislature meets once in two years, the last Monday in December, at Jef-

erson city. Every white male citizen, over 21 years of age, who has resided one year in the state, and three months in the county in which he offers his vote, has the right of suffrage. The judges of the various courts are elected by the people for the term of six years. One bank only, with not more than five branches, may be established in the state.

History.—Father Marquette, a Jesuit missionary, and Jolyet, a citizen of Quebec, visited the territory of the present state of Missouri in 1673, and soon afterward the Canadian trappers and Jesuit missionaries penetrated the country in every direction. The lead mines of Missouri were worked by the French as early as 1720. The first permanent European settlement was made at St. Genevieve, in 1763, by a lead mining company, under the name of "Laclede, Maxam, & Co." St. Louis was founded the next year. In 1800, Spain retroceded all her claims to Louisiana to France, who formally took possession of the country, and sold it to the United States in 1803. In 1805, that portion of Louisiana lying east of the Mississippi, and all of the country bearing that name west of that river, was erected into a territorial government, under the name of the "Territory of Louisiana." In 1812 a part of the present state of Louisiana was separated from the rest of the territory, and admitted into the Union as an independent state, and the remainder was reorganized under the name of the "Territory of Missouri," which was supposed to contain all the lands west of the Mississippi to the "South sea," except a part of the state of Louisiana. In 1821, a part of this territory was admitted into the Union as the present state of Missouri. On the subject of its admission a long debate ensued in Congress, it having been proposed to prohibit slavery in the new state. It was finally admitted by what is called the Missouri compromise, which tolerated slavery in the state, but prohibited it in the territory north of it. Mottoes of the seal, *Salus populi suprema lex esto*: "The welfare of the people is the first great law." "United we stand, divided we fall."

MOBILE COUNTY, situated at the southwest corner of Alabama, with the gulf of Mexico on the south, Mobile bay and Texas river on the east, and traversed by Mobile river. Area, 2,250 square miles. Face of the country level; soil generally barren. Seat of justice, Mobile. Pop. in 1816, 1,300; in 1820, 2,672; in 1830, 3,071; in 1840, 18,741; in 1850, 27,600.

MOBILE, city, seat of justice of Mobile co., Ala., situated 30 miles N. of the gulf of Mexico, on Mobile bay, 160 miles E. of New Orleans, and 1,013 miles from W., and is the principal city and only port of entry of Alabama. It occupies an elevated plain, overlooking the pleasant bay, and is fanned by its breezes. Fires have several times injured the city, but it has been rebuilt with improved appearance and solidity. From its position in the state, it is the receptacle of the commerce of Alabama. Vast quantities of cotton are annually exported. The harbor is difficult of access, being obstructed by marshy islands and shoals, but within, deep and spacious enough for large vessels. These, by a circuit around an island, in front of the city, anchor at its wharves. The entrance to the bay is defended by a fortification, and marked by a lighthouse. Good water, from a neighboring source, is distributed over the city by iron-pipes. Railroads are in process of construction

to connect the city with the Ohio river, and also with the Atlantic states through Georgia. It has daily communication, by steamboat, to Proctorsville, and thence, by railroad, with New Orleans. There are a custom-house, courthouse, hospitals, banks, and churches. In 1813, the period when Mobile passed from the hands of Spain into possession of the United States, it contained about 100 buildings. In 1830, the population was 3,194; in 1840, 12,672; in 1850, 20,515.

MONTOURS, p. o., Alleghany co., Pa.

MONTPELIER, p. t., seat of justice of Washington co., and capital of the state of Vt., is pleasantly situated amid rugged hills, 160 miles northwest of Boston, and 516 miles from Washington. Watered by Onion river and tributaries. It is the thoroughfare and centre of an ex-

tensive trade from Boston and other points. The dwellings are neat and handsome, and the architecture of the state capitol is admired for its purity and beauty. The edifice is built of dark granite, in the form of a cross, and is of the Doric order. The centre is 72 feet wide, and 100 feet deep; the two wings are each 39 feet wide and 50 feet deep; the top of the dome is 36 feet above the ridge, and 100 feet from the ground.

Montpelier is connected by railway with Burlington and Boston, and the intermediate places.

The population in 1810, was 1,877 in 1820, ———; in 1830, 1,792; in 1840, 3,725; in 1850, 3,210.

NASHVILLE, city, seat of justice of Davidson co., and capital of Tennessee, situated on the south bank of Cumberland river, at the head of steamboat navigation, 120 miles from its entrance into the Mississippi, and 648 miles from Washington. Built upon an uneven surface, amid the picturesque scenery of a fertile and populous region, few southern cities combine a pleasant situation with more attractive hospitality and refinement, or display, in proportion to their population, a greater number of elegant public structures. Of these, a new statehouse is the most magnificent. The court-house is a spacious and convenient edifice; the churches are beautiful and costly; and the schools are excellent. The medical department of Nashville university is in a prosperous condition, with commodious buildings, well supplied with apparatus and other means of instruction. The other public buildings are, the jail, the penitentiary, and an asylum for the insane.

Large steamboats navigate Cumberland river, to Nashville, during the greater part of the year. When

the water is low, the stream admits vessels only of 30 or 40 tons burden. These carry on an extensive trade with New Orleans and intermediate places.

Water is elevated from the river into a reservoir, and thence distributed over the city.

The population in 1830, was 5,566; in 1840, 6,929; in 1850, 9,125.

NASHVILLE, p. o., Hanover township, Chautauque co., N. Y., 310 ms. w. of Albany; from W. 358 ms.

NASONVILLE, p. o., Providence co., R. I.

NASSAU COUNTY, situated at the northeast corner of Florida, with St. Mary's river on the west, and the Atlantic on the east. Area, 576 square miles. Seat of justice, Nassau c. h. Pop. in 1830, 1,511; in 1840, 1,892; in 1850, 2,164.

NASSAU, p. t., Rensselaer co., N. Y., 12 ms. s. e. of Albany; from W. 365 ms. Watered by Kinderhook creek and tributaries. Pop. 3,261.

NATCHEZ, city, seat of justice of Adams co., Miss., situated on the east bank of Mississippi river, 292 ms. from New Orleans, and 1,110 ms. from Washington. Along the river, at the foot of the bluff, which rises 200 feet from the water, there are stores, warehouses, and other buildings, but the more respectable part of the city occupies the top of the elevation, which affords fine sites for residences, and from its heights a beautiful view of the river and its banks. Broad streets divide pleasant mansions; which indicate the wealth and taste of their owners. Rich and varied trees lend their charms to the other attractions of the city. Natchez is the mart of the interior of Mississippi, receiving the vast quantities of cotton and other staples, which are conveyed by numerous steamboats to New Orleans and other towns on the river. There is a railroad, 30 miles long, from Natchez to Malcom.

The population in 1810, was 1,511; in 1820, 2,184; in 1830, 2,789; in 1840, 4,800; in 1850, 4,434.

NATCHITOCHES PARISH, situated in the westerly part of Louisiana, and traversed by Red river. Area, 4000 square miles. Face of the country generally hilly; soil barren, except along Red river. Seat of justice, Natchitoches. Pop. in 1810, 2,870; in 1820, 7,486; in 1830, 7,905; in 1840, 14,350; in 1850, 14,201.

NEBRASKA TERRITORY lies, between the summit of the Rocky mountains on the west, and the states of Missouri and Iowa on the east, the parallel of 43° north latitude on the north, and the territory of New Mexico and the parallel of 36° 30' north latitude on the south. An act for the organization of this territory passed the house of representatives, in February, 1853, but failed to be acted on in the senate. It includes a part of the land set apart for the Indians, and the act provides that their rights shall not be affected by the organization, without their consent.

NEW ALBANY, city and p. t., seat of justice of Floyd co., Ind., located on the north bank of the Ohio, 4 miles below Louisville, and 2 miles below the falls, 121 miles southerly from Indianapolis, and 600 miles from Washington. Like most other favorably-situated western towns, its population has rapidly increased within ten years, and exhibits all the signs of enterprise and prosperity. Here steamboats and other vessels are extensively built, and carry on a brisk trade with the valleys of the Ohio and Mississippi.

The population in 1830, was about 1,900; in 1840, 4,226; in 1850, 6,418.

NEWARK, p. v., Arcadia township, Wayne co., N. Y., 186 ms. W. of Albany; from W. 357 ms. Situated on the Erie canal.

NEWARK, city, seat of justice of Essex co., N. J., 49 N. E. of Trenton, is situated on the west side of Passaic river, 3 miles from its entrance into Newark bay, 9 miles west of New York, and 215 miles from Washington. It has a pleasant location on level ground, somewhat elevated above the river. The streets are broad and straight, lighted with gas, and supplied through iron-pipes with pure water from a neighboring spring. Two spacious public parks, shaded by lofty trees, add much to the beauty of the place. The houses are gene-

rally of wood, or brick, the former white and neat, the latter substantial and elegant. Toward the west, the elevated ground affords a commanding site for residences; and the courthouse, which is a large structure of brown freestone, in the Egyptian style of architecture. The materials for this, were wrought from the neighboring quarries, which furnish large quantities of material for buildings in New York and elsewhere. The New Jersey railroad, connecting New York with Newark, Trenton, and Philadelphia, here enters a splendid depot, which is one of the most prominent buildings in the city. The Morris and Essex railroad also terminates here. Newark has also a number of churches, of which some are elegant and beautiful; also several banks, literary institutions, and libraries.

In proportion to its population, few cities are more extensively engaged in manufactures. Whalebone, oil, carriages, varnish, leather, shoes, candles, soap, harness, machinery, castings, zinc, paint, and glass, are among the articles most largely produced.

Steamboats ply several times a-day to New York; and the Morris canal, traversing the fruitful country from which it is named, has contributed much to the trade and prosperity of the place.

The population in 1810, was 5,000 (in whole township, 8,008); in 1820, 6,507; in 1830, 10,953; in 1840, 17,290; in 1850, 38,893.

NEW BEDFORD, c. h., p. t., seat of justice together with Taunton of Bristol co., Mass., 58 ms. S. of Boston; from W. 434 ms. The town is built on a bold elevation, contains many fine buildings, and appears with advantage from the harbor. A bridge across the Acushnet leads to Fairhaven, on the opposite side. No other place in the country is engaged so exclusively and extensively in the whaling business as this. About \$5,000,000 of capital, and two hundred vessels are employed.

The New Bedford and Taunton railroad joins the Boston and Providence railroad at Mansfield, and communicates with this place.

The population in 1810, was 5,651; in 1820, 3,947; in 1830, 7,592; in 1840, 12,087; in 1850, 16,443.

NEWBURYPORT, city, seat of justice, together with Salem and Ipswich, of Essex co., Mass., situated on the south bank of Merrimack river, three miles from its entrance into the ocean, and 30 miles north of Boston. It embraces about one mile square with regular streets, those parallel with the river rising one above the other, after the manner of terraces. That nearest the water is occupied by stores and warehouses, and the higher ones by neat and commodious dwellings, which command a beautiful prospect of the harbor and ocean. A road and bridge lead to Plum Island, at the mouth of the river, which is a pleasant summer resort. A suspension bridge and a railroad bridge extend across the Merrimack to Salisbury. The harbor is ample, and is protected by a breakwater, but is obstructed by a sand-bar at its entrance. Newburyport has been and is still extensively engaged in commerce and fisheries; and although of late its maritime trade has diminished, its population and general prosperity has increased. The town contains a customhouse, of rough granite, with a Grecian Doric portico, churches, a courthouse, jail, market, and other public buildings. The Eastern railroad from Boston and Salem, enters the place, and unites it to the Portsmouth, Portland, and Saco railroads.

The pop. in 1810, was 7,634; in 1820, 6,852; in 1830, 6,375; in 1840, 7,161; in 1850, 9,532.

NEW HAMPSHIRE, one of the United States so named by John Nason, to whom a portion of its territory was granted, in 1621, after Hampshire in England, the county from which he emigrated. It lies between 42° 41' and 45° 11' north latitude, and 70° 40' and 72° 28' west longitude from Green-

wich, and is bounded north by Canada East, east by Maine, from which it is separated in part by Salmon Fall river; southeast by the Atlantic; south by Massachusetts; and west by Connecticut river, which separates it from Vermont. Superficial area, 9,411 square miles.

Physical Aspect.—Taking into consideration the small extent of surface in this state, it is more varied in its natural features than any other in the Union. Commencing at the seashore, we find a sandy beach, bordered by extensive salt marshes, which are intersected by numerous creeks. In the midst of this beach there is a bold promontory, called the "Boar's Head." For the first twenty or thirty miles from the sea, the country is either level, or variegated by rolling swells, fertile valleys, and small conical hills. The remainder of the state is greatly diversified by sloping woodlands, rich intervales, rugged mountains, fruitful valleys, foaming cascades, crystal rivers, and silvery lakes, which, from their wild and picturesque effect, have distinguished this country as the "Switzerland of America." The soil is as varied in its character as the surface; a considerable portion is fertile, and it is generally better adapted to grazing than tillage. The "intervale lands," on the borders of the large rivers, are esteemed as the most valuable, particularly if they are enriched by annual floods. The uplands, of an uneven surface, and of a warm, moist, stony soil, are regarded as the best for grazing. The sandy, pine plains are the poorest, and often are of little or no use, except for growing wood.

Mountains.—The most considerable of these are the White mountains, the Monadnock, Mooshillock, Ossipee, Sunipec, Patuckoway, and Kearsarge.

Rivers, Lakes, and Bays.—The principal rivers are, the Connecticut, Merrimack, Androscoggin, Salmon Fall, Piscataqua, Exeter, or Swamescot, Saco, Upper and Lower Ammonoosuc, Sugar, Ashuelot, Winnipisogee, Contoocook, Lamprey, Nashua, Margalloway, and Piscataquog. The chief lakes are the Winnipisogee, Umbagog, Ossipee, Massabesick, Sunipec, Newfound, and Squam. There are two "Great bays" in this state; the largest situated at the confluence of Swamescot, Winnicut, and Lamprey rivers; the other at the southwest corner of Lake Winnipisogee. Merry-meeting bay is situated at the easterly end of the same lake.

Islands.—The only islands worthy of note are the Isles of Shoals, seven in number, off Portsmouth harbor, and numerous islets in Winnipisogee lake. Of the latter, Long Cow, and Davis's, are the largest, and are in a high state of cultivation.

Climate.—The climate, like that of the states adjacent, is subject to the extremes of heat and cold, but the air is generally salubrious and pure. Along the seaboard, invalids subject to complaints of the lungs generally suffer from the ocean winds. Morning and evening fires become necessary from September till May. The streams are generally locked up in ice, and in the open country the snow often abides on the earth from November till April, and in the woods till May or June.

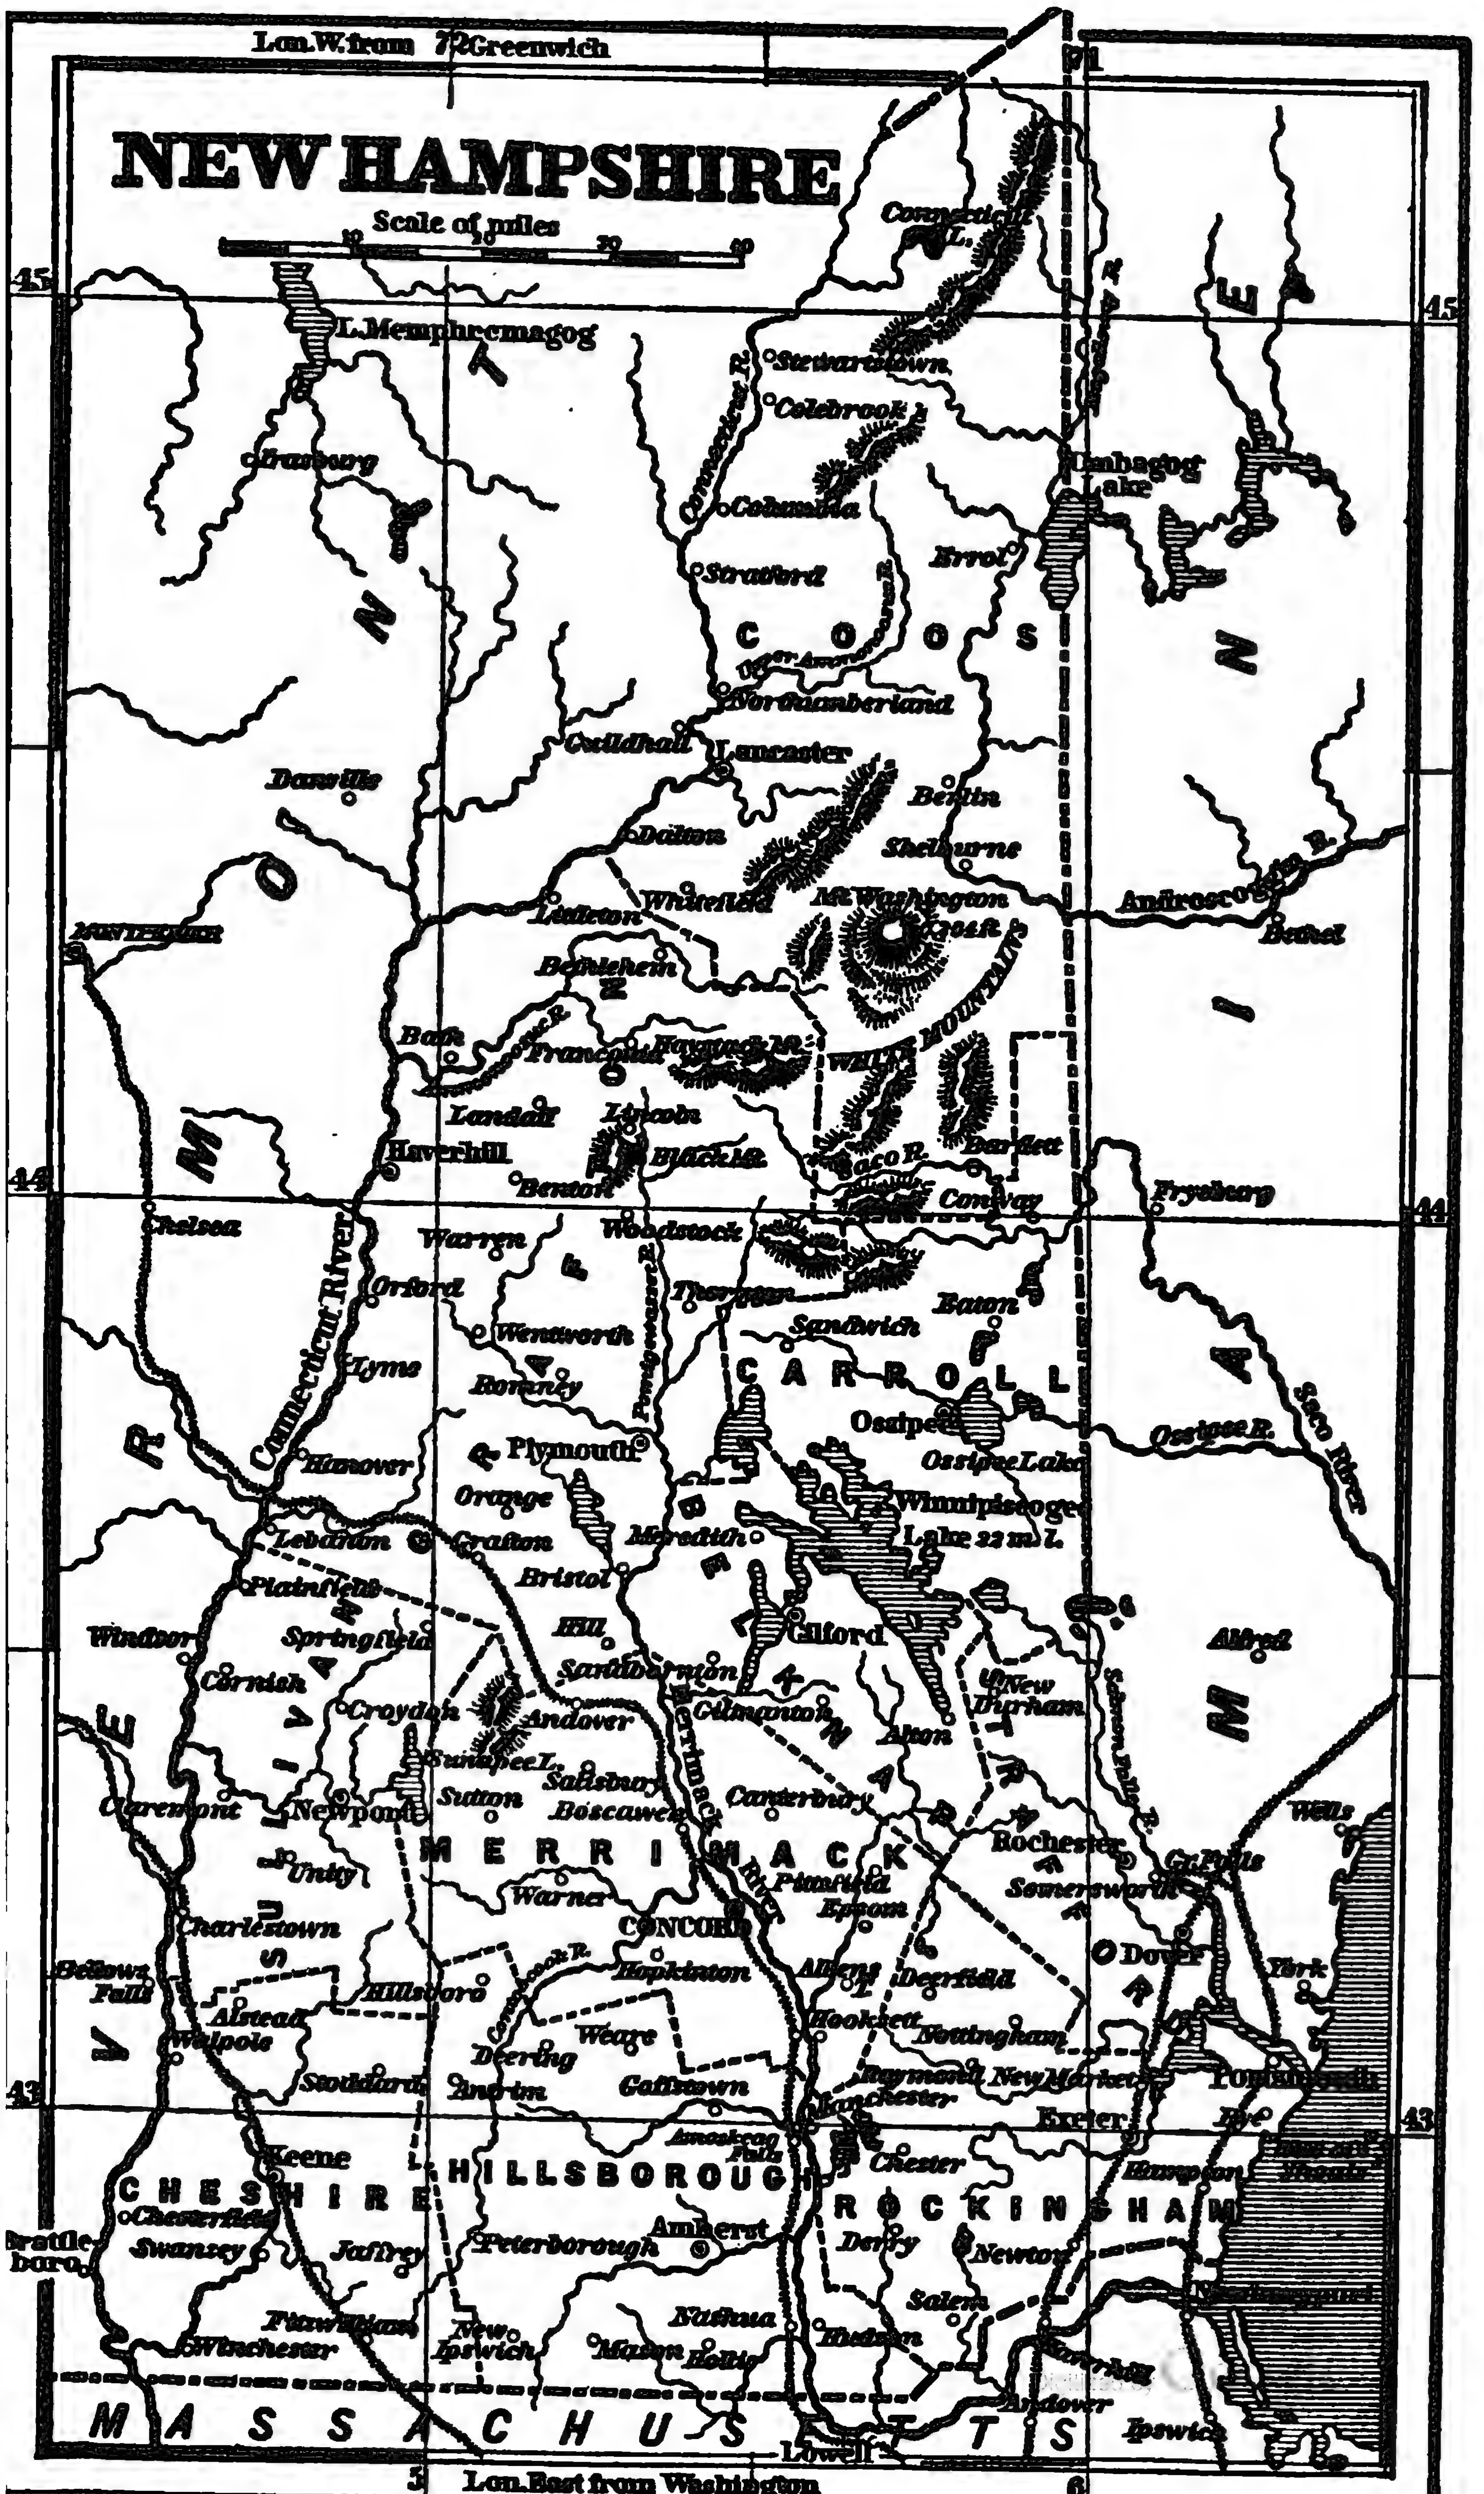

Productive Resources.—The chief products of this state are, horses, mules, horned cattle, sheep, swine, poultry, eggs, sugar, butter, cheese, hay, wood, lumber, wheat, rye, barley, oats, buckwheat, potatoes, and Indian corn. Of the mineral resources there are iron, lead, silver, tin, zinc, magnesia, soap-stone, granite, felspar, and mica.

Manufactures.—The principal manufactures, of this state, are cotton and woollen goods, cast-iron, paper, leather, boots and shoes, carriages, furniture, hats, pottery-ware, mechanical and agricultural instruments, &c.

NEW HAMPSHIRE

Scale of miles

Lon. East from Washington

Railroads and Canals.—There are about 600 miles of railroads in New Hampshire, a large proportion of them radiating from Concord, the political capital of the state, to almost every point of the compass. The only canals in the state are those for facilitating the navigation of the Merrimack river.

Commerce.—New Hampshire has but the single port of Portsmouth on the Atlantic, and its direct foreign commerce heretofore has been extremely small, amounting in the aggregate to less than \$60,000 in 1851; but the increased facilities afforded by the opening of railroad communication between Portsmouth and the interior of the state will materially enlarge its foreign trade. The shipping owned within the state amounts to about 21,000 tons.

Education.—The principal literary institutions of the state are, Dartmouth college, at Hanover, attached to which is the New Hampshire medical school; and theological seminaries at Gilmanton, Concord, and New Hampton. There are also 70 or 80 academies, and about 3,000 common schools throughout the state.

Population.—In 1790, 141,899; in 1800, 183,762; in 1810, 214,360; in 1820, 244,161; in 1830, 269,328; in 1840, 284,574; in 1850, 317,964. Number of slaves in 1790, 158; in 1800, 8; in 1840, 1.

Government.—The legislative power is vested in a senate, of 12 members, and house of representatives, of about 300 members, and the executive power in a governor and five councillors, all elected by the people, the second Tuesday in March. The right of suffrage is vested in every male inhabitant, of twenty-one years, excepting paupers and persons not taxed. The judiciary power is vested in a superior court, and court of common pleas. Judges are appointed by the governor and council during good behavior, or until seventy years of age.

History.—The first permanent settlements in New Hampshire were made at Little Harbor, Portsmouth, and Dover, in 1623. In 1641, all the colonists of this state placed themselves under the protection of Massachusetts, and formed a part of the county of Norfolk. In 1679, it was again constituted a separate province by Charles II., and in 1680, the first assembly convened. In 1690 it reunited with Massachusetts, from which, two years after, it was again separated, against the wishes of the people. In 1695, the two provinces were placed under the jurisdiction of New York, but were reunited in 1702, and thus continued until 1741, when a separate governor was appointed over each, and New Hampshire ever after constituted a distinct government. During the war of independence the government was conducted by a temporary administration. The state constitution was established in 1784, which, with the amendments of 1792, forms the one at present in force. In 1788, this state, in convention, adopted the constitution of the United States.

NEW HAVEN, city, seat of justice of New Haven co., and capital, together with Hartford, of Connecticut, situated on a bay of Long Island sound, which is here about twenty miles broad. It is 76 miles northeast of New York, and 300 miles from Washington. The city is built on a plain, or gentle slope, at the foot of two bold spurs from the Green Mountain range, which here terminate in two abrupt cliffs, called "East Rock" and "West Rock," rising like sentinels on either side. From the top of these, the eye beholds a wide and enchanting prospect. Below the feet, New Haven lies in quiet beauty, with its white mansions and steeples embowered amid clusters of rich foliage. Far around stretch hills, slopes, and valleys, rich with the colors of nature and cultivation; away to the south and east, like an ocean, spreads the sound, sprinkled here and there by a mote-like sail, and dimly bounded by the cloud-like shores of Long Island. New Haven is one of the most beautiful of cities. Its streets are broad and regular; tasteful, chaste, and splendid buildings are surrounded by pleasant gardens, parks, and trees. Many of these are elms, stately and venerable, planted by the fathers of the town, and cherished, with commendable pride and care, by their descendants. This profusion of foliage and freedom from contracted and uncleanly streets, combine for New Haven the advantages of the city and the country. The "Green" is a pleasant spot of ground, shaded by rows of lofty elms; in the centre, stand the three oldest churches in the city. Toward the west is the statehouse, a large and imposing structure; still further to the west, are the buildings of Yale College, one of the oldest, most flourishing, and respectable institutions of America. Hillhouse avenue, bordered by sides of undulating green, from which spring rows of stately trees, runs between splendid mansions and gardens, that rival Italian villas in loveliness. Northwest of the city, is the cemetery, beautifully laid out, and adorned with an imposing entrance in Egyptian architecture.

The harbor is spacious, but so shallow that large vessels are obliged to anchor at Long wharf, which, from time to time, has been extended to a length of 3,943 feet. New Haven prosecutes an extensive coasting-trade with New York and the towns along the sound. Several ships from foreign shores also make this city their port. The New York and New Haven railroad has largely increased the communication between the two cities, and the New Haven and Hartford railroad joins the lines at Springfield, which traverse the valley of Connecticut river, and other parts of Massachusetts.

The population in 1810, was 5,772; in 1820, 7,147; in 1830, 10,180; in 1840, 14,890; in 1850, 20,345.

NEW JERSEY, one of the U. States, so named after the island of Jersey, on the coast of France, of which Sir George Carteret, to whom New Jersey was conveyed, in 1664, was formerly governor. It lies between 38° 57' and 41° 22' north latitude, and 73° 58' and 75° 29' west longitude from Greenwich, and is bounded

north by New York, east by the Hudson river, Staten Island sound, and the Atlantic, southeast by Delaware bay, which separates it from Delaware, and west by Delaware river, which separates it from Pennsylvania. It has a superficial area of 8,320 square miles.

Physical Aspect.—The state presents a great diversity of surface, as well as of soil. The northern portions are mountainous, interspersed with rich valleys, and extensive tracts, well adapted for grazing, and for the plough. An elevated range, called the "Pallades," commences near Hoboken, and extends along the Hudson for miles, forming a perpendicular wall of stone, which at some points is 500 feet high. The middle portions are less hilly than the northern, and much of the soil is fertile, and well tilled. The southern counties are principally composed of a long range of level country, commencing near Sandy Hook, and lines the whole coast of the middle states. Much of this range is sandy, and nearly barren, producing little else than small oaks and yellow pine; in other cases, swamps of white cedar occur. In the southern section along the Atlantic and Delaware bay, there are extensive marshes, which are monthly inundated by the tides. A stratum of green-sand marl in some places thirty feet thick, underlies the surface throughout the length of this tract, which has been extensively used as a fertilizer in reclaiming the land.

Mountains.—In the northwesterly part of the state there are two ranges, subordinate to the Alleghenies, one called South mountain, and the other, Blue mountain, or Kittatinny ridge. The more prominent points of the former are designated by the names of Mosconetcong, Schooley's, Hamburg, Wawayanda, and Bear

Mountains. The other elevations worthy of note are Mine, Trowbridge, Second, and Ramapo mountains.

Rivers and Bays.—The principal rivers are the Hudson, and Delaware, its eastern and western boundaries; the Raritan, the Passaic (the great falls of which, above Paterson, have a perpendicular descent of seventy feet), Hackensack, Egg Harbor, Great Egg Harbor, Shrewsbury, Toms, Maurice, Delaware, and Mosconetcong. The chief bays are the Delaware, Newark, New York, Raritan, Sandy Hook, Barnegat, Little and Great Egg Harbors, and Grassy.

Climate.—The climate along the seaboard, and in the valleys of the interior may be regarded as mild, though the former is often rendered disagreeable by ocean winds. In the mountainous region, at the north, the winters are cold, and often severe. The range of temperature varies from a few degrees below zero to 90° above. The air is remarkably pure, and usually salubrious, except in summer and autumn, near marshes and streams.

Productive Resources.—The chief products are horses, mules, neat cattle, sheep, swine, poultry, eggs, butter, shad, oysters, cheese, fruit, cider, wine, flax-seed, wax, pitch, tar, resin, turpentine, silk, wool, lumber, hay, wheat, rye, barley, buckwheat, oats, potatoes, and Indian corn. Of the mineral and fossil resources of this state, iron and zinc are the most abundant, and their ores are extensively wrought. An extensive bed of phosphorite, a native phosphate of lime, has been opened in Morris county, which promises to add much to the agricultural wealth of the state.

Manufactures.—The manufactures of New Jersey are numerous, embracing almost every variety of goods. Cotton and woollen mills are established in many parts of the state; silk and linen goods are manufactured to a considerable extent; also, machinery, hardware, railroad-cars, carriages, fire-arms, jewelry, glass, earthen-ware, fire-brick, &c. There are also extensive tanneries, and other manufactories of leather. Whole villages are employed in boot and shoe making.

Railroads and Canals.—The great lines of railroad between New York and Pennsylvania traverse this state. Branch roads are also constructed from the central roads to the more important towns; making, in the aggregate, about 200 miles of railway in the state. The Delaware and Raritan, 42 miles, and Morris, 102 miles long, are the most important canals in this state.

Commerce.—The foreign commerce of New Jersey is small, on account of its proximity to New York; its coasting trade, however, is considerable. The shipping owned within the state amounts to about 80,000 tons.

Education.—The principal literary institutions are, the college of New Jersey, at Princeton, founded in 1738, and Rutgers college, at New Brunswick, founded in 1770, to both of which are attached theological seminaries, and to the former a law-school; and Burlington college, founded in 1846. There are about 100 academies, and 1,500 common schools in New Jersey.

Population.—In 1790, 184,139; in 1800, 211,949; in 1810, 249,555; in 1820, 277,575; in 1830, 320,823; in 1840, 373,306; in 1850, 489,555. Number of slaves in 1790, 11,423; in 1800, 12,422; in 1810, 10,851; in 1820, 7,657; in 1830, 2,254; in 1840, 674; in 1850, 222.

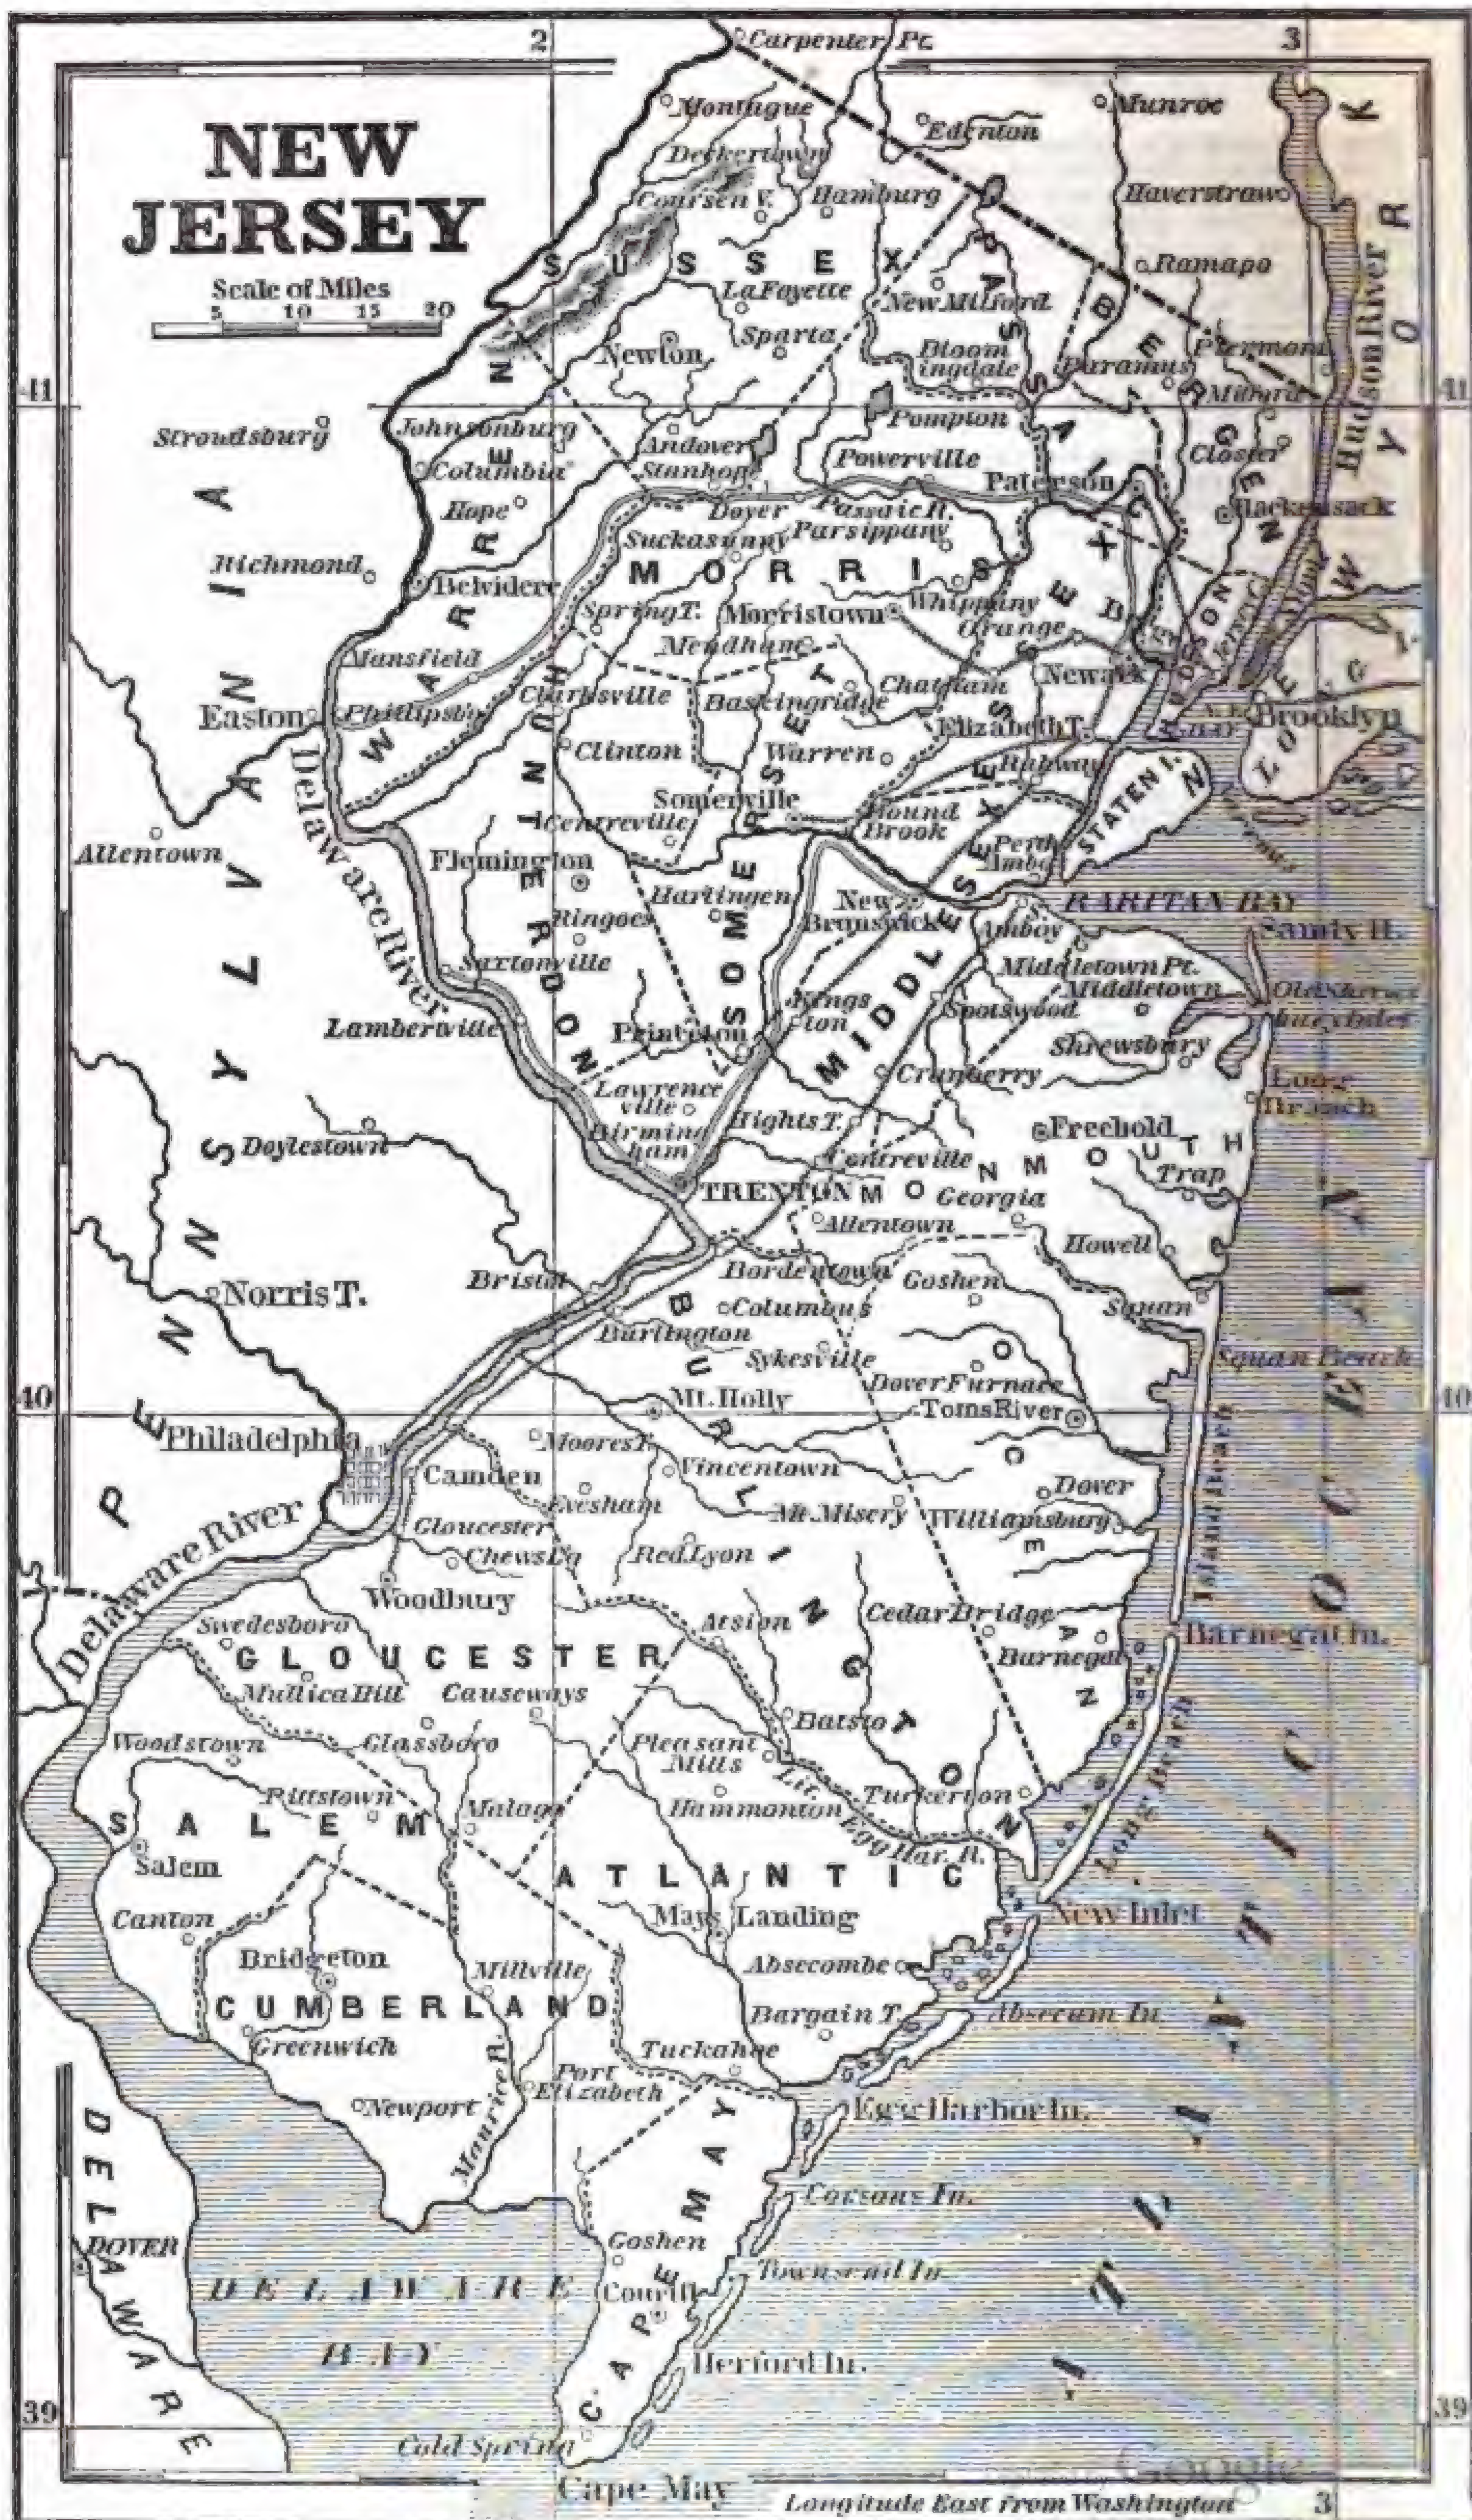

Government.—The legislative power is vested in a senate, elected for three years, one third renewed each year, and a general assembly, chosen annually, on the second Tuesday of October; the executive power in a governor, elected by the people, once in three years, at the general election, and is ineligible for the next term. The judiciary power is vested in a court of errors and appeals, composed of the chancellor, supreme court, and six other judges; a court for trial of impeachments; a court of chancery; a supreme court of five judges, and courts of common pleas. The chancellor and supreme court judges hold their offices for seven years; the six judges of the court of errors and appeals for six years, one judge vacating his seat each year in rotation; and the judges of the courts of common pleas for five years. The latter are chosen by the legislature; the others receive their appointment from the governor. The right of suffrage is vested in every white male citizen, who shall have resided in the state one year, and in the county where he votes, five months, paupers, idiots, insane persons, and criminals, excepted.

History.—The territory of the present state of New Jersey was formally included, in part, in New Swedenland, which lay on the west side of the Delaware, as far

NEW JERSEY

Scale of Miles

5 10 15 20

up as Trenton falls, and was purchased of the Indians, and settled by the Swedes, in 1638. It also formed a part of the Dutch province of New Netherlands, and was included within the jurisdiction of Governor Stuyvesant, in 1655. The first permanent settlement within the present limits of this state was made at Bergen, in 1621, by the Danes. In 1664, Charles II., of England, having granted to his brother James, the duke of York, the whole territory from Connecticut river to the shores of the Delaware, the latter immediately compelled the Dutch and Swedes to surrender, and took possession of the province, with its subordinate settlements west of the river, except the present state of New Jersey, which he conveyed to Sir George Carteret, and Lord Berkeley, who were already proprietors of Carolina. In 1673, the Dutch regained all their former possessions, including New Jersey, but relinquished them to the English again, in 1674. After this event, the duke of York obtained a second charter, confirming the former grant, and restored to Berkeley and Carteret their former rights. Berkeley sold his share of the territory, which two years afterward, fell into the hands of William Penn and two other quakers, and the province was divided into "East Jersey," and "West Jersey." The former was governed by Carteret, and the latter by the quakers. In 1682, after the death of Carteret, East Jersey was sold to Penn, and eleven other individuals of the same order and faith, who were joined by twelve partners, and were known as the "twenty-four proprietors." The celebrated Robert Barclay was appointed governor for life. In 1688, the whole province was placed under the jurisdiction of Andros, who had already become royal governor over New England and New York. From this time, up to 1702, the country remained in an unsettled condition; the people surrendered their powers of government to the crown, making New Jersey a royal province, and uniting it to New York. From this period, up to 1738, the province remained under the jurisdiction of New York, but had a distinct legislative assembly, and a separate government was instituted, which continued in force until the American Revolution. The state constitution was formed in 1776, and the constitution of the United States adopted in 1787. Motto of the seal, "Liberty and Independence."

NEW LONDON COUNTY, situated at the southeast corner of Connecticut, and traversed by Thames river, with the Connecticut on the west. Area 600 square miles. Face of the country, hilly; soil, productive. Seats of justice, Norwich and New London. Pop. in 1810, 34,707; in 1820, 35,943; in 1830, 42,295; in 1840, 44,463; in 1850, 51,822.

NEW LONDON, city, seat of justice, together with Norwich, of New London co., Ct., 44 ms. S. E. of Hartford; from W. 353 ms. occupies a gentle elevation facing the southeast, on the west bank of the Thames river, three miles from its entrance into Long Island sound. The ground on which it stands is rocky and rough, and seems to have discouraged the builders from attempting to construct it with regularity. The houses erected within a few years, however, are superior to the rest, and the appearance of the town is much improved.

New London harbor is deep and convenient, although its entrance is narrow, and might be easily blockaded, if it were not defended by two fortifications. Fort Griswold, in Groton, opposite the city, and Fort Trumbull, one mile below, shared severely the struggles of the Revolution, and the former, especially, was the scene of bloody barbarities under Benedict Arnold, who, in 1781, entered the harbor, took Fort Griswold, and burned the town. An obelisk of granite, 125 feet high, preserves the memory of the patriots who here suffered and died.

The business of the city is chiefly whale-fishing and commerce; its tonnage is larger than that of any other town in the state.

The Worcester and Norwich railroad unites with the Thames at Allyn's Point, a few miles above.

The population in 1810, was 3,238; in 1820, 3,330; in 1830, 4,356; in 1840, 5,519; in 1850, 8,994.

History.—The history of New Mexico has very much to do with the history of the United States. The Spanish discovery of the country in 1598, and the subsequent settlement of it, were the first steps towards the acquisition of the territory. The discovery of the country was made by Juan de Oñate, who was sent by the Spanish government to explore the region. He found the country to be fertile and well suited for agriculture, and he established a settlement at Santa Fe. The Spanish government then sent more settlers to the country, and the population grew. The Spanish government also established a system of government for the territory, and the country was governed as a province of the Spanish empire. The Spanish government was successful in governing the territory for many years, but the country was eventually lost to the United States in 1848. The United States then acquired the territory, and it has since been a part of the United States.

Physical Aspect.—The physical aspect of the country is very interesting. The country is mostly a plateau, with some mountains and some valleys. The plateau is about 6,000 feet high, and it is covered with a layer of soil that is very fertile. The mountains are mostly made of granite, and they are very high. The valleys are mostly made of alluvial soil, and they are very fertile. The climate is very dry, and the weather is very hot. The country is very beautiful, and it is a very interesting place to visit.

Mountains.—The Rocky mountain range traverses the eastern part of New Mexico, bearing different names at different points. South of Santa Fe it rises to 6,000 or 8,000 feet, while to the north some snow-capped peaks are seen which rise to from 10,000 to 12,000 feet above the sea-level. The Sierra Madre or Anahuac range stretches northward from the Mexican Cordillera through the centre of the territory, and the Wahsatch mountains lie near the western boundary.

Rivers and Lakes.—The principal river of New Mexico is the Rio Grande del Norte. Its head waters are found in the Rocky mountains, and flowing south it enters the gulf of Mexico, forming, in the lower part of its course, the boundary line between Mexico and the United States. Its length is about 2,000 miles, and it is navigable for steamboats, about 700 miles from its mouth. Its principal tributaries are, the Chama, Pecos, Conchos, Salado, Alamo, and San Juan. The Colorado, which empties into the gulf of California, forms part of the western boundary, until it extends into the territory. The Gila, which flows westward, extends along the southern boundary until reaching its source

in the Sierra Madre range. Its principal branches are the Colorado and the Rio Grande. The Colorado is about 1,000 miles long, and it is the largest river in the west of the United States. The Rio Grande is about 1,500 miles long, and it is the largest river in the south of the United States. The country is very fertile, and it is a very interesting place to visit.

Climate.—The climate is generally temperate, but it is very dry. The weather is very hot, and the country is very beautiful. The country is very fertile, and it is a very interesting place to visit. The country is very dry, and the weather is very hot. The country is very beautiful, and it is a very interesting place to visit.

Population.—The population of New Mexico is about 100,000. The population is mostly made up of Spanish Americans, but there are also many Indians. The population is growing, and the country is becoming more and more settled. The population is very interesting, and it is a very interesting place to visit.

Government.—The government of New Mexico is a territorial government. The governor is appointed by the President of the United States. The governor has the same powers as the governor of a state. The territory is divided into counties, and each county has a sheriff. The territory is very interesting, and it is a very interesting place to visit.

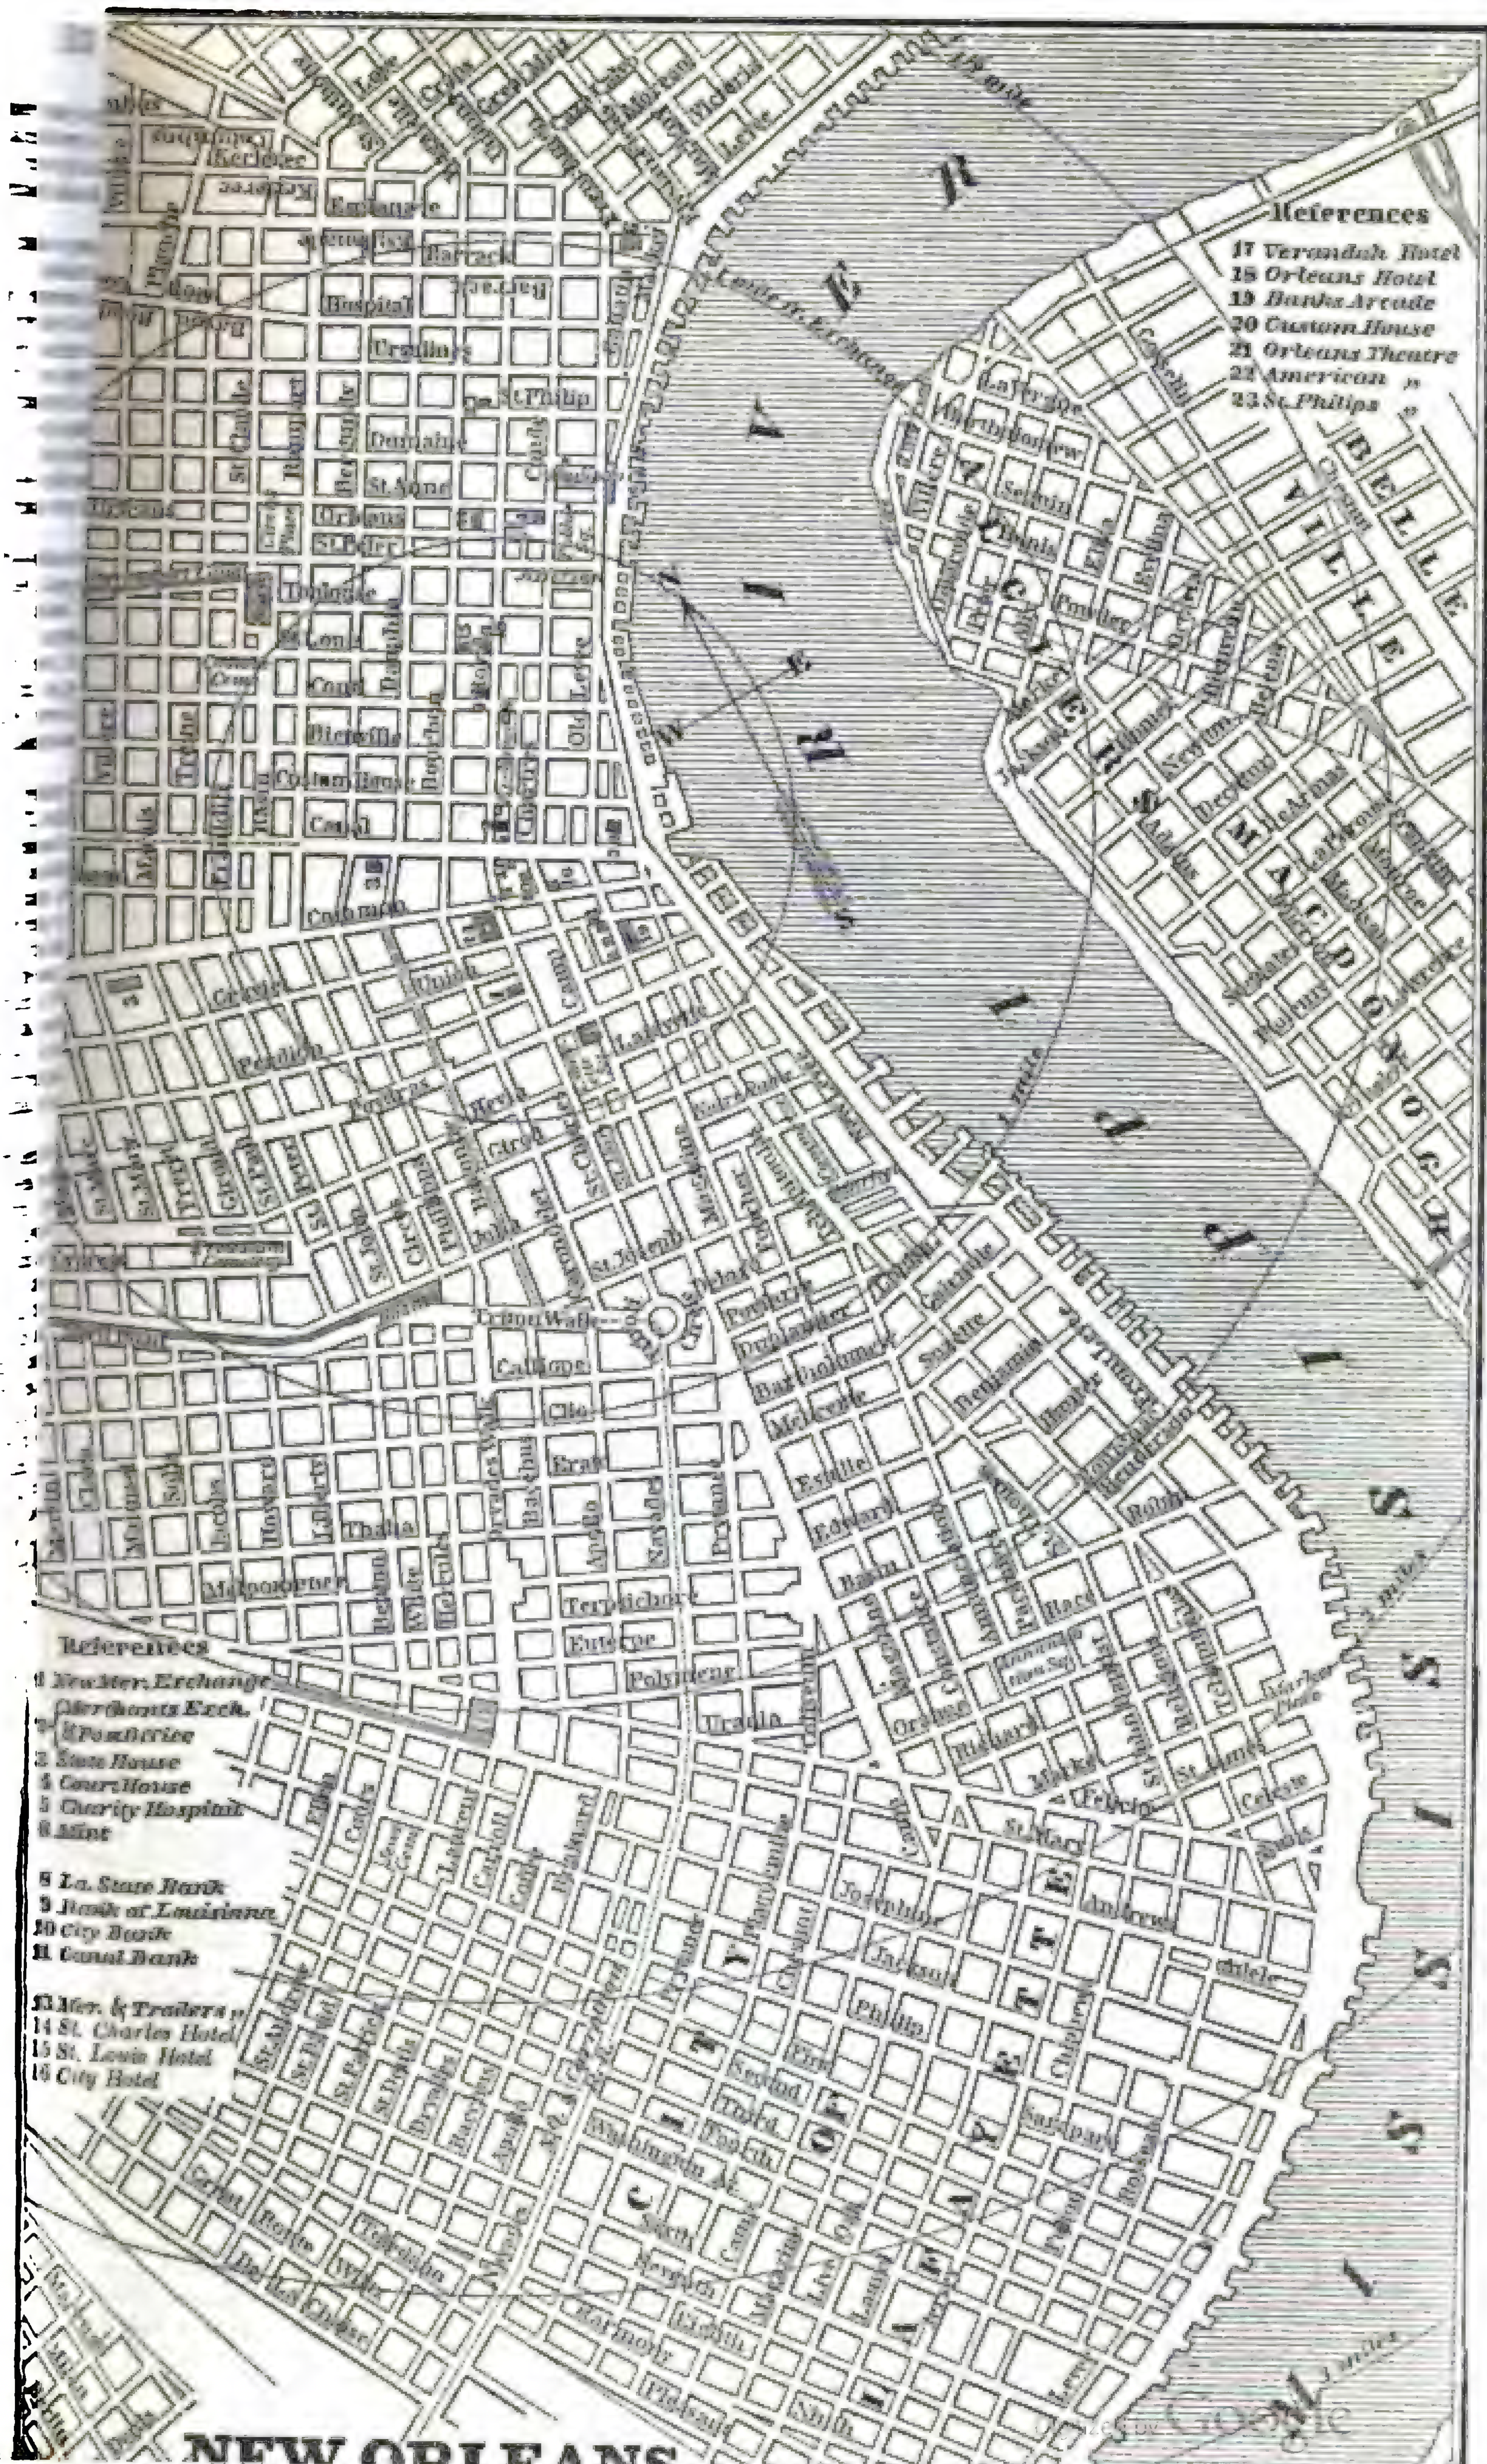

History.—The history of New Mexico has very much to do with the history of the United States. The Spanish discovery of the country in 1598, and the subsequent settlement of it, were the first steps towards the acquisition of the territory. The discovery of the country was made by Juan de Oñate, who was sent by the Spanish government to explore the region. He found the country to be fertile and well suited for agriculture, and he established a settlement at Santa Fe. The Spanish government then sent more settlers to the country, and the population grew. The Spanish government also established a system of government for the territory, and the country was governed as a province of the Spanish empire. The Spanish government was successful in governing the territory for many years, but the country was eventually lost to the United States in 1848. The United States then acquired the territory, and it has since been a part of the United States.

History.—The history of New Mexico has very much to do with the history of the United States. The Spanish discovery of the country in 1598, and the subsequent settlement of it, were the first steps towards the acquisition of the territory. The discovery of the country was made by Juan de Oñate, who was sent by the Spanish government to explore the region. He found the country to be fertile and well suited for agriculture, and he established a settlement at Santa Fe. The Spanish government then sent more settlers to the country, and the population grew. The Spanish government also established a system of government for the territory, and the country was governed as a province of the Spanish empire. The Spanish government was successful in governing the territory for many years, but the country was eventually lost to the United States in 1848. The United States then acquired the territory, and it has since been a part of the United States.

Physical Aspect.—The physical aspect of the country is very interesting. The country is mostly a plateau, with some mountains and some valleys. The plateau is about 6,000 feet high, and it is covered with a layer of soil that is very fertile. The mountains are mostly made of granite, and they are very high. The valleys are mostly made of alluvial soil, and they are very fertile. The climate is very dry, and the weather is very hot. The country is very beautiful, and it is a very interesting place to visit.

Mountains.—The Rocky mountain range traverses the eastern part of New Mexico, bearing different names at different points. South of Santa Fe it rises to 6,000 or 8,000 feet, while to the north some snow-capped peaks are seen which rise to from 10,000 to 12,000 feet above the sea-level. The Sierra Madre or Anahuac range stretches northward from the Mexican Cordillera through the centre of the territory, and the Wahsatch mountains lie near the western boundary.

Rivers and Lakes.—The principal river of New Mexico is the Rio Grande del Norte. Its head waters are found in the Rocky mountains, and flowing south it enters the gulf of Mexico, forming, in the lower part of its course, the boundary line between Mexico and the United States. Its length is about 2,000 miles, and it is navigable for steamboats, about 700 miles from its mouth. Its principal tributaries are, the Chama, Pecos, Conchos, Salado, Alamo, and San Juan. The Colorado, which empties into the gulf of California, forms part of the western boundary, until it extends into the territory. The Gila, which flows westward, extends along the southern boundary until reaching its source

rally of wood, or brick, the former white and neat, the latter substantial and elegant. Toward the west, the elevated ground affords a commanding site for residences; and the courthouse, which is a large structure of brown freestone, in the Egyptian style of architecture. The materials for this, were wrought from the neighboring quarries, which furnish large quantities of material for buildings in New York and elsewhere. The New Jersey railroad, connecting New York with Newark, Trenton, and Philadelphia, here enters a splendid depot, which is one of the most prominent buildings in the city. The Morris and Essex railroad also terminates here. Newark has also a number of churches, of which some are elegant and beautiful; also several banks, literary institutions, and libraries.

In proportion to its population, few cities are more extensively engaged in manufactures. Whalebone, oil, carriages, varnish, leather, shoes, candles, soap, harness, machinery, castings, zinc, paint, and glass, are among the articles most largely produced.

Steamboats ply several times a-day to New York; and the Morris canal, traversing the fruitful county from which it is named, has contributed much to the trade and prosperity of the place.

The population in 1810, was 5,000 (in whole township, 8,008); in 1820, 6,507; in 1830, 10,953; in 1840, 17,290; in 1850, 38,893.

NEW BEDFORD, c. h., p. t., seat of justice together with Taunton of Bristol co., Mass., 58 ms. S. of Boston; from W. 434 ms. The town is built on a bold elevation, contains many fine buildings, and appears with advantage from the harbor. A bridge across the Acushnet leads to Fairhaven, on the opposite side. No other place in the country is engaged so exclusively and extensively in the whaling business as this. About \$5,000,000 of capital, and two hundred vessels are employed.

The New Bedford and Taunton railroad joins the Boston and Providence railroad at Mansfield, and communicates with this place.

The population in 1810, was 5,651; in 1820, 3,947; in 1830, 7,592; in 1840, 12,087; in 1850, 16,443.

NEWBURYPORT, city, seat of justice, together with Salem and Ipswich, of Essex co., Mass., situated on the south bank of Merrimack river, three miles from its entrance into the ocean, and 30 miles north of Boston. It embraces about one mile square with regular streets, those parallel with the river rising one above the other, after the manner of terraces. That nearest the water is occupied by stores and warehouses, and the higher ones by neat and commodious dwellings, which command a beautiful prospect of the harbor and ocean. A road and bridge lead to Plum Island, at the mouth of the river, which is a pleasant summer resort. A suspension bridge and a railroad bridge extend across the Merrimack to Salisbury. The harbor is ample, and is protected by a breakwater, but is obstructed by a sand-bar at its entrance. Newburyport has been and is still extensively engaged in commerce and fisheries; and although of late its maritime trade has diminished, its population and general prosperity has increased. The town contains a customhouse of rough granite, with a Grecian Doric portico, churches, a courthouse, jail, market, and other public buildings. The Eastern railroad from Boston and Salem, enters the place, and unites it to the Portsmouth, Portland, and Saco railroads.

The pop. in 1810, was 7,634; in 1820, 6,852; in 1830, 6,375; in 1840, 7,161; in 1850, 9,532.

NEW HAMPSHIRE, one of the United States so named by John Mason, to whom a portion of its territory was granted, in 1622, after Hampshire in England, the county from which he emigrated. It lies between 42° 41' and 45° 11' north latitude, and 70° 40' and 72° 28' west longitude from Green-

wich, and is bounded north by Canada East, east by Maine, from which it is separated in part by Salmon Fall river; southeast by the Atlantic; south by Massachusetts; and west by Connecticut river, which separates it from Vermont. Superficial area, 9,411 square miles.

Physical Aspect.—Taking into consideration the small extent of surface in this state, it is more varied in its natural features than any other in the Union. Commencing at the seashore, we find a sandy beach, bordered by extensive salt marshes, which are intersected by numerous creeks. In the midst of this beach there is a bold promontory, called the "Boar's Head." For the first twenty or thirty miles from the sea, the country is either level, or variegated by rolling swells, fertile valleys, and small conical hills. The remainder of the state is greatly diversified by sloping woodlands, rich intervals, rugged mountains, fruitful valleys, foaming cascades, crystal rivers, and silvery lakes, which, from their wild and picturesque effect, have distinguished this country as the "Switzerland of America." The soil is as varied in its character as the surface; a considerable portion is fertile, and it is generally better adapted to grazing than tillage. The "intervale lands," on the borders of the large rivers, are esteemed as the most valuable, particularly if they are enriched by annual floods. The uplands, of an uneven surface, and of a warm, moist, stony soil, are regarded as the best for grazing. The sandy, pine plains are the poorest, and often are of little or no use, except for growing wood.

Mountains.—The most considerable of these are the White mountains, the Monadnock, Moosilauke, Ossipee, Sunipsee, Patuckoway, and Kearsarge.

Rivers, Lakes, and Bays.—The principal rivers are, the Connecticut, Merrimack, Androscoggin, Salmon Fall, Piscataqua, Exeter, or Swamscot, Seco, Upper and Lower Ammonoosuc, Sugar, Ashualet, Winnipiseogee, Contoocook, Lamprey, Nashua, Margalloway, and Piscataquog. The chief lakes are the Winnipiseogee, Umbagog, Ossipee, Massabesick, Sunipsee, Newfound, and Squam. There are two "Great bays" in this state; the largest situated at the confluence of Swamscot, Winnicut, and Lamprey rivers; the other at the southwest corner of Lake Winnipiseogee. Merry-meeting bay is situated at the easterly end of the same lake.

Islands.—The only islands worthy of note are the Isles of Shoals, seven in number, off Portsmouth harbor, and numerous islets in Winnipiseogee lake. Of the latter, Long Cow, and Davis's, are the largest, and are in a high state of cultivation.

Climate.—The climate, like that of the states adjacent, is subject to the extremes of heat and cold, but the air is generally salubrious and pure. Along the seaboard, invalids subject to complaints of the lungs generally suffer from the ocean winds. Morning and evening fires become necessary from September till May. The streams are generally locked up in ice, and in the open country the snow often abides on the earth from November till April, and in the woods till May or June.

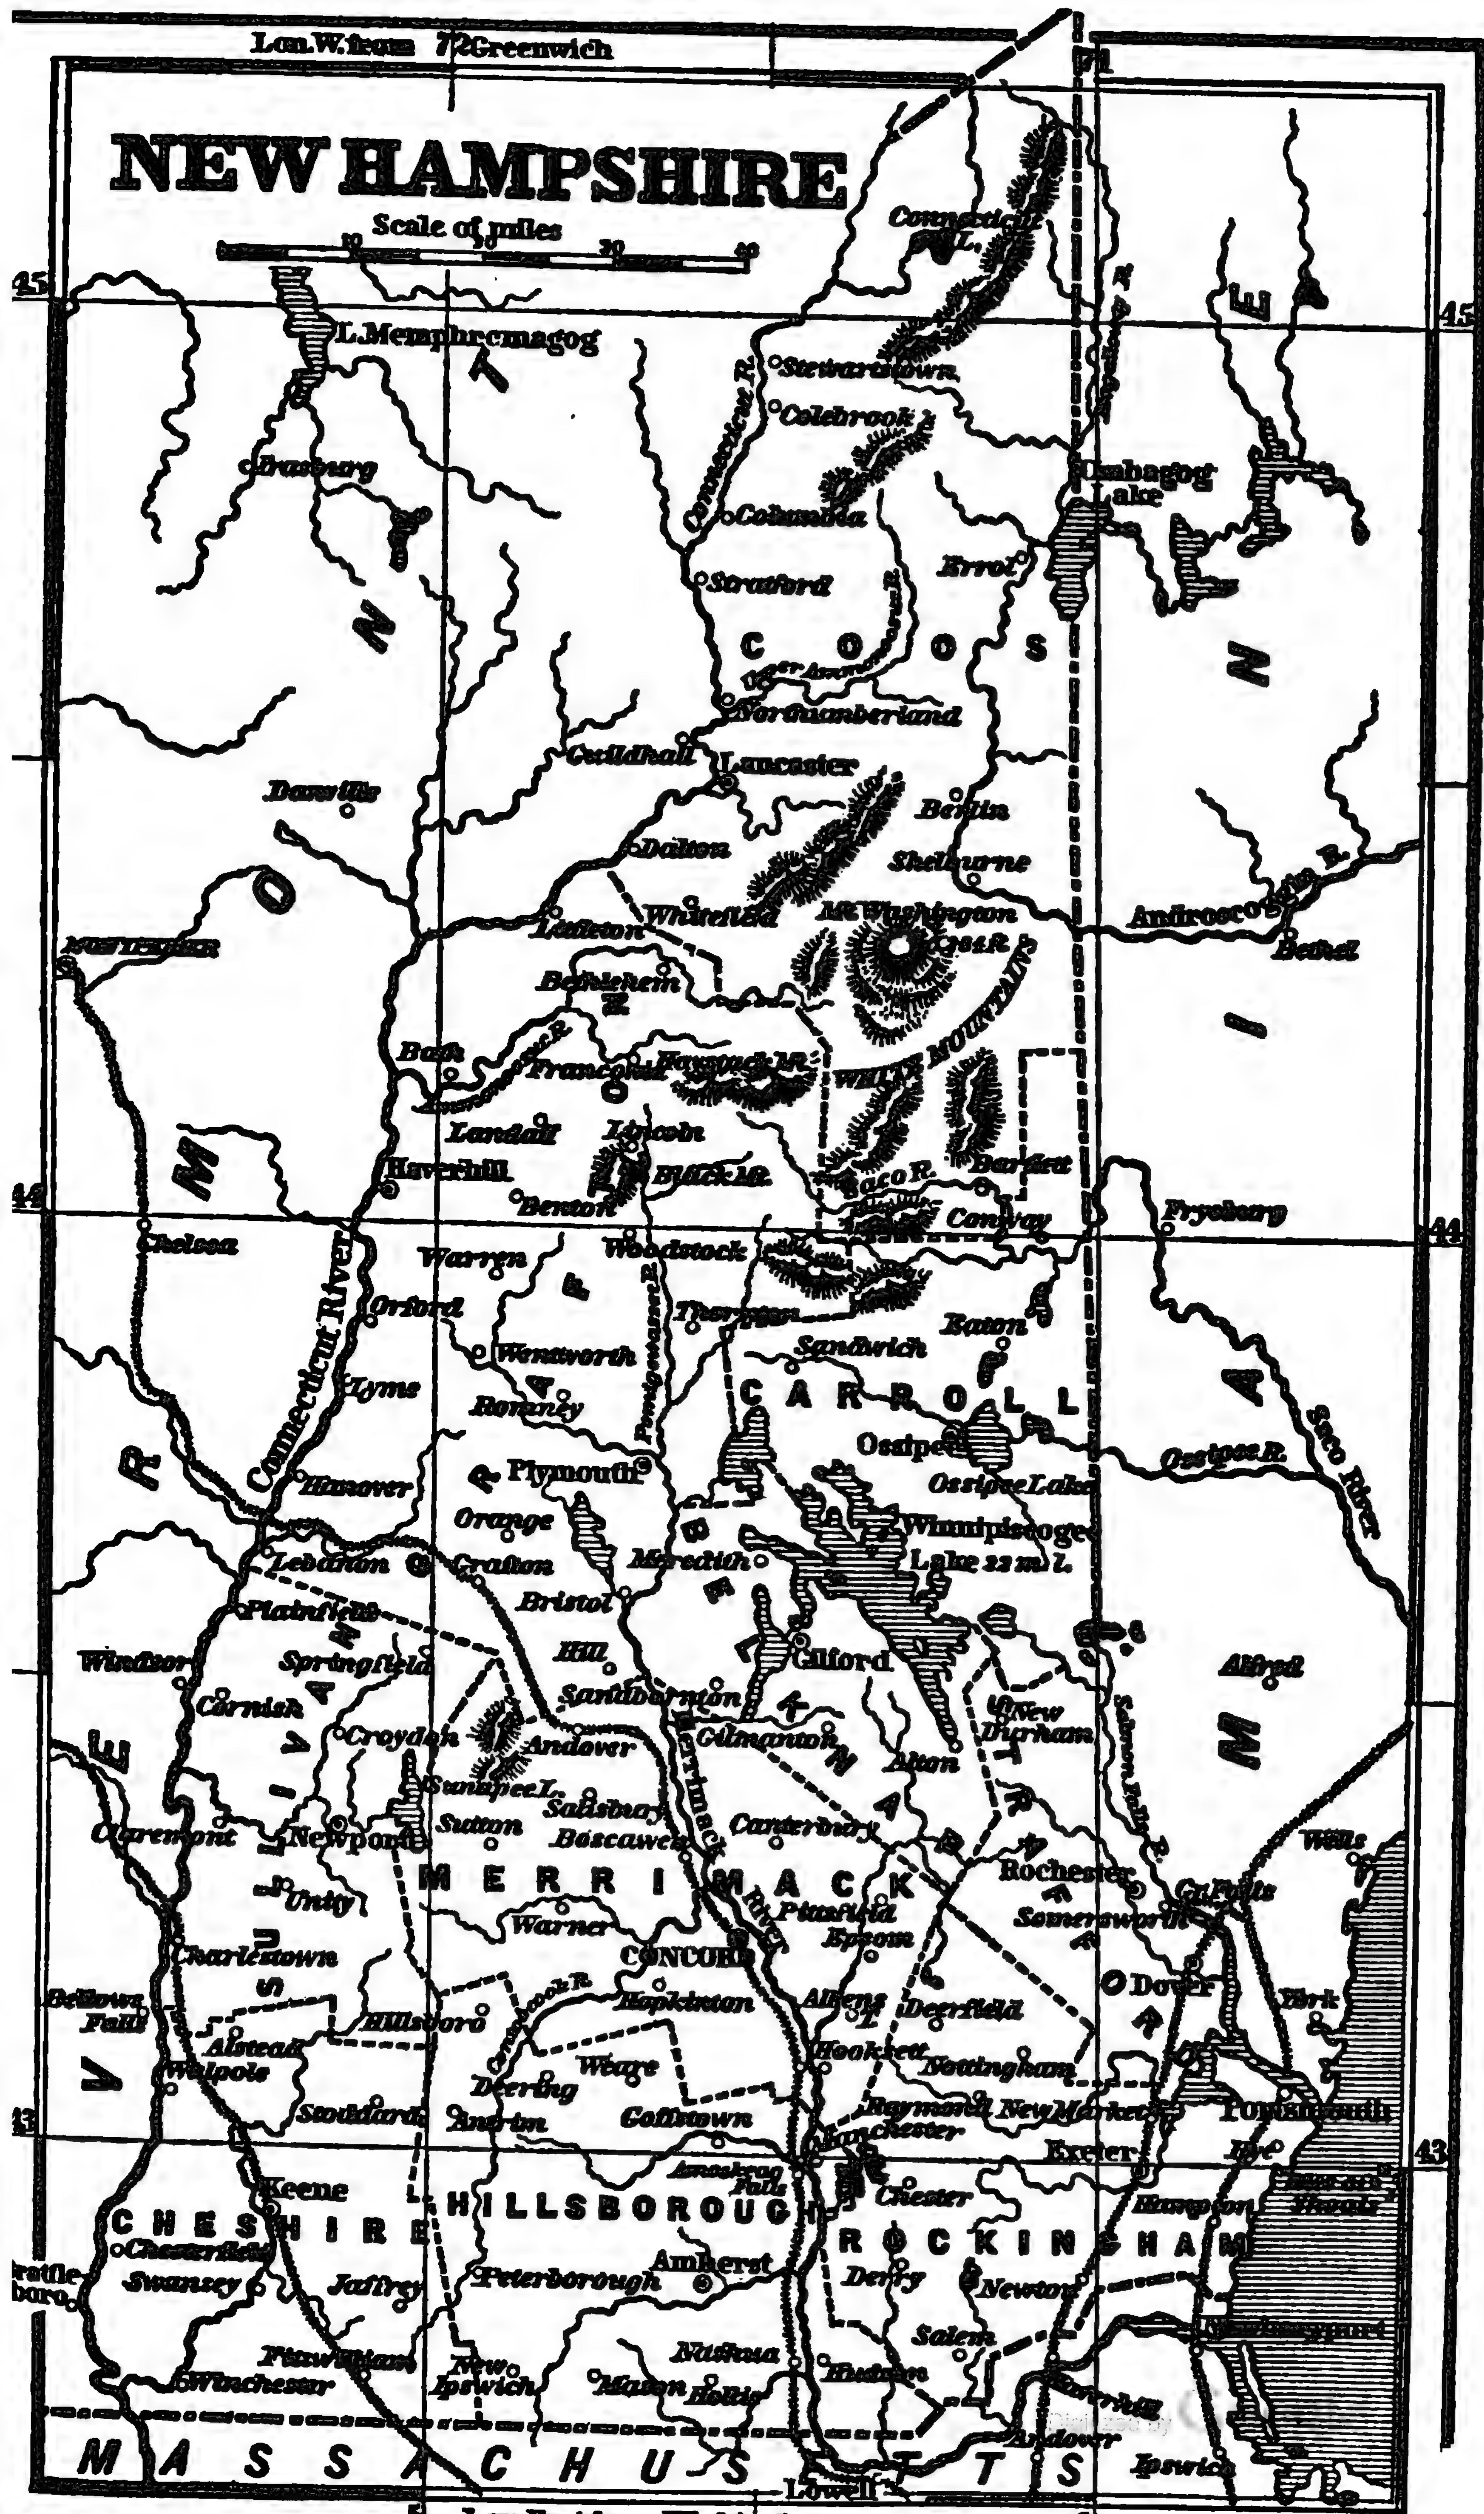

Productive Resources.—The chief products of this state are, horses, mules, horned cattle, sheep, swine, poultry, eggs, sugar, butter, cheese, hay, wood, lumber, wheat, rye, barley, oats, buckwheat, potatoes, and Indian corn. Of the mineral resources there are iron, lead, silver, tin, zinc, magnesia, soap-stone, granite, feldspar, and mica.

Manufactures.—The principal manufactures of this state are cotton and woollen goods, cast-iron, paper, leather, boots and shoes, carriages, furniture, hats, pottery-ware, mechanical and agricultural instruments, &c.

Lon. East from Washington

Railroads and Canals.—There are about 600 miles of railroads in New Hampshire, a large proportion of them radiating from Concord, the political capital of the state, to almost every point of the compass. The only canals in the state are those for facilitating the navigation of the Merrimack river.

Commerce.—New Hampshire has but the single port of Portsmouth on the Atlantic, and its direct foreign commerce heretofore has been extremely small, amounting in the aggregate to less than \$60,000 in 1851; but the increased facilities afforded by the opening of railroad communication between Portsmouth and the interior of the state will materially enlarge its foreign trade. The shipping owned within the state amounts to about 23,000 tons.

Education.—The principal literary institutions of the state are, Dartmouth college, at Hanover, attached to which is the New Hampshire medical school; and theological seminaries at Gilmanton, Concord, and New Hampton. There are also 70 or 80 academies, and about 3,000 common schools throughout the state.

Population.—In 1790, 141,899; in 1800, 183,762; in 1810, 214,360; in 1820, 244,161; in 1830, 269,328; in 1840, 284,574; in 1850, 317,964. Number of slaves in 1790, 158; in 1800, 8; in 1840, 1.

Government.—The legislative power is vested in a senate, of 12 members, and house of representatives, of about 300 members, and the executive power in a governor and five councillors, all elected by the people, the second Tuesday in March. The right of suffrage is vested in every male inhabitant, of twenty-one years, excepting paupers and persons not taxed. The judiciary power is vested in a superior court, and court of common pleas. Judges are appointed by the governor and council during good behavior, or until seventy years of age.

History.—The first permanent settlements in New Hampshire were made at Little Harbor, Portsmouth, and Dover, in 1623. In 1641, all the colonists of this state placed themselves under the protection of Massachusetts, and formed a part of the county of Norfolk. In 1679, it was again constituted a separate province by Charles II., and in 1680, the first assembly convened. In 1690 it reunited with Massachusetts, from which, two years after, it was again separated, against the wishes of the people. In 1695, the two provinces were placed under the jurisdiction of New York, but were reunited in 1702, and thus continued until 1741, when a separate governor was appointed over each, and New Hampshire ever after constituted a distinct government. During the war of independence the government was conducted by a temporary administration. The state constitution was established in 1784, which, with the amendments of 1792, forms the one at present in force. In 1788, this state, in convention, adopted the constitution of the United States.

NEW HAVEN, city, seat of justice of New Haven co., and capital, together with Hartford, of Connecticut, situated on a bay of Long Island sound, which is here about twenty miles broad. It is 76 miles northeast of New York, and 300 miles from Washington. The city is built on a plain, on gentle slope, at the foot of two bold spurs from the Green Mountain range, which here terminate in two abrupt cliffs, called "East Rock" and "West Rock," rising like sentinels on either side. From the top of these, the eye beholds a wide and enchanting prospect. Below the feet, New Haven lies in quiet beauty, with its white mansions and steeples embowered amid clusters of rich foliage. Far around stretch hills, slopes, and valleys, rich with the colors of nature and cultivation; away to the south and east, like an ocean, spreads the sound, sprinkled here and there by a mote-like sail, and dimly bounded by the cloud-like shores of Long Island. New Haven is one of the most beautiful of cities. Its streets are broad and regular; tasteful, chaste, and splendid buildings are surrounded by pleasant gardens, parks, and trees. Many of these are elms, stately and venerable, planted by the fathers of the town, and cherished, with commendable pride and care, by their descendants. This profusion of foliage and freedom from contracted and uncleanly streets, combine for New Haven the advantages of the city and the country. The "Green" is a pleasant spot of ground, shaded by rows of lofty elms; in the centre, stand the three oldest churches in the city. Toward the west is the statehouse, a large and imposing structure; still further to the west, are the buildings of Yale College, one of the oldest, most flourishing, and respectable institutions of America. Hillhouse avenue, bordered by sides of undulating green, from which spring rows of stately trees, runs between splendid mansions and gardens, that rival Italian villas in loveliness. Northwest of the city, is the cemetery, beautifully laid out, and adorned with an imposing entrance in Egyptian architecture.

The harbor is spacious, but so shallow that large vessels are obliged to anchor at Long wharf, which, from time to time, has been extended to a length of 3,943 feet. New Haven prosecutes an extensive coasting-trade with New York and the towns along the sound. Several ships from foreign shores also make this city their port. The New York and New Haven railroad has largely increased the communication between the two cities, and the New Haven and Hartford railroad joins the lines at Springfield, which traverse the valley of Connecticut river, and other parts of Massachusetts.

The population in 1810, was 5,772; in 1820, 7,147; in 1830, 10,180; in 1840, 14,890; in 1850, 20,345.

NEW JERSEY, one of the U. States, so named after the island of Jersey, on the coast of France, of which Sir George Carteret, to whom New Jersey was conveyed, in 1664, was formerly governor. It lies between 38° 57' and 41° 22' north latitude, and 73° 58' and 75° 29' west longitude from Greenwich, and is bounded

north by New York, east by the Hudson river, Staten Island sound, and the Atlantic, southeast by Delaware bay, which separates it from Delaware, and west by Delaware river, which separates it from Pennsylvania. It has a superficial area of 8,320 square miles.

Physical Aspect.—The state presents a great diversity of surface, as well as of soil. The northern portions are mountainous, interspersed with rich valleys, and extensive tracts, well adapted for grazing, and for the plough. An elevated range, called the "Pallades," commences near Hoboken, and extends along the Hudson for miles, forming a perpendicular wall of stone, which at some points is 500 feet high. The middle portions are less hilly than the northern, and much of the soil is fertile, and well tilled. The southern counties are principally composed of a long range of level country, commencing near Sandy Hook, and lines the whole coast of the middle states. Much of this range is sandy, and nearly barren, producing little else than small oaks and yellow pine; in other cases, swamps of white cedar occur. In the southern section along the Atlantic and Delaware bay, there are extensive marshes, which are monthly inundated by the tides. A stratum of green-sand marl in some places thirty feet thick, underlies the surface throughout the length of this tract, which has been extensively used as a fertilizer in reclaiming the land.

Mountains.—In the northwesterly part of the state there are two ranges, subordinate to the Alleghanies, one called South mountain, and the other, Blue mountain, or Kittatinny ridge. The more prominent points of the former are designated by the names of Mosconetcong, Schooley's, Hamburg, Wawayanda, and Bear

Mountain. The other elevations worthy of note are Mine, Trowbridge, Second, and Ramapo mountains.

Rivers and Bays.—The principal rivers are the Hudson, and Delaware, its eastern and western boundaries; the Raritan, the Passaic (the great falls of which, above Paterson, have a perpendicular descent of seventy feet), Hackensack, Egg Harbor, Great Egg Harbor, Shrewsbury, Toms, Maurice, Delaware, and Mosconetcong. The chief bays are the Delaware, Newark, New York, Raritan, Sandy Hook, Barnegat, Little and Great Egg Harbors, and Grassy.

Climate.—The climate along the seaboard, and in the valleys of the interior may be regarded as mild, though the former is often rendered disagreeable by ocean winds. In the mountainous region, at the north, the winters are cold, and often severe. The range of temperature varies from a few degrees below zero to 90° above. The air is remarkably pure, and usually salubrious, except in summer and autumn, near marshes and streams.

Productive Resources.—The chief products are horses, mules, neat cattle, sheep, swine, poultry, eggs, butter, shad, oysters, cheese, fruit, cider, wine, flax-seed, wax, pitch, tar, resin, turpentine, silk, wool, lumber, hay, wheat, rye, barley, buckwheat, oats, potatoes, and Indian corn. Of the mineral and fossil resources of this state, iron and zinc are the most abundant, and their ores are extensively wrought. An extensive bed of phosphorite, a native phosphate of lime, has been opened in Morris county, which promises to add much to the agricultural wealth of the state.

Manufactures.—The manufactures of New Jersey are numerous, embracing almost every variety of goods. Cotton and woollen mills are established in many parts of the state; silk and linen goods are manufactured to a considerable extent; also, machinery, hardware, railroad-cars, carriages, fire-arms, jewelry, glass, earthen-ware, fire-brick, &c. There are also extensive tanneries, and other manufactories of leather. Whole villages are employed in boot and shoe making.

Railroads and Canals.—The great lines of railroad between New York and Pennsylvania traverse this state. Branch roads are also constructed from the central roads to the more important towns; making, in the aggregate, about 200 miles of railway in the state. The Delaware and Raritan, 42 miles, and Morris, 102 miles long, are the most important canals in this state.

Commerce.—The foreign commerce of New Jersey is small, on account of its proximity to New York; its coasting trade, however, is considerable. The shipping owned within the state amounts to about 80,000 tons.

Education.—The principal literary institutions are, the college of New Jersey, at Princeton, founded in 1738, and Rutgers college, at New Brunswick, founded in 1770, to both of which are attached theological seminaries, and to the former a law-school; and Burlington college, founded in 1846. There are about 100 academies, and 1,500 common schools in New Jersey.

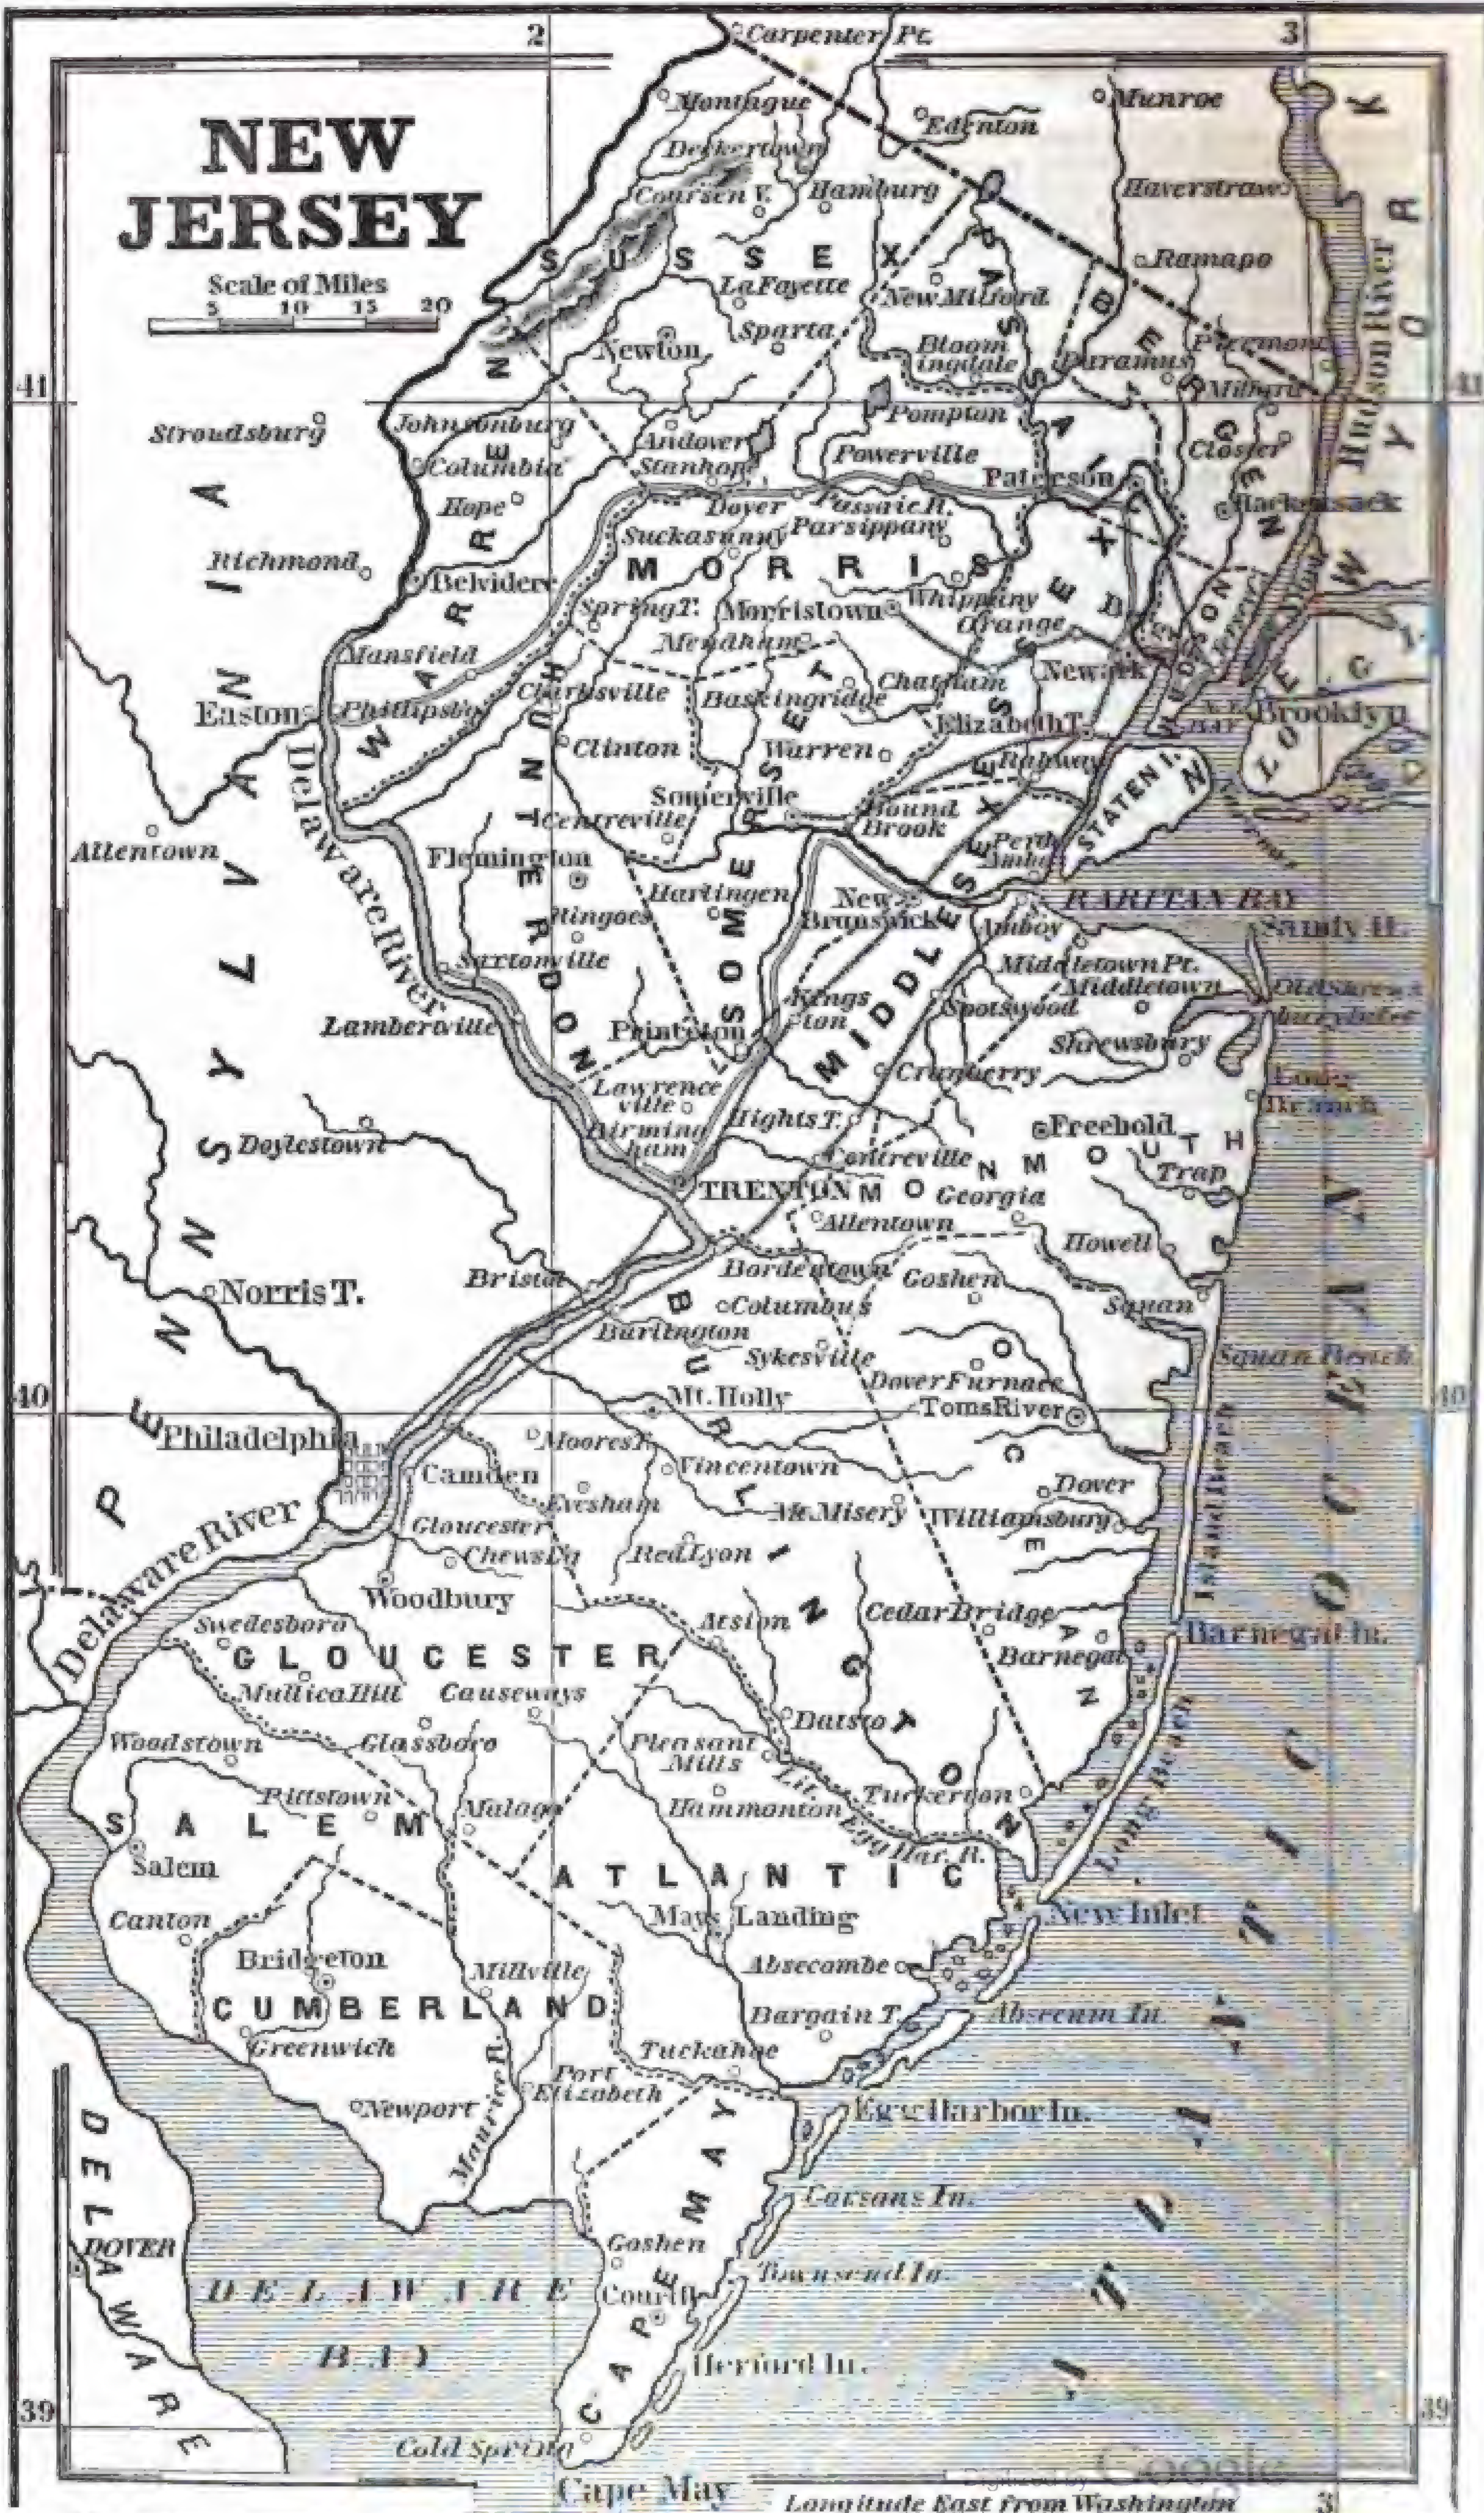

Population.—In 1790, 184,139; in 1800, 211,949; in 1810, 249,555; in 1820, 277,575; in 1830, 320,823; in 1840, 373,306; in 1850, 489,555. Number of slaves in 1790, 11,423; in 1800, 12,422; in 1810, 10,851; in 1820, 7,657; in 1830, 2,254; in 1840, 674; in 1850, 222.

Government.—The legislative power is vested in a senate, elected for three years, one third renewed each year, and a general assembly, chosen annually, on the second Tuesday of October; the executive power in a governor, elected by the people, once in three years, at the general election, and is ineligible for the next term. The judiciary power is vested in a court of errors and appeals, composed of the chancellor, supreme court, and six other judges; a court for trial of impeachments; a court of chancery; a supreme court of five judges, and courts of common pleas. The chancellor and supreme court judges hold their offices for seven years; the six judges of the court of errors and appeals for six years, one judge vacating his seat each year in rotation; and the judges of the courts of common pleas for five years. The latter are chosen by the legislature; the others receive their appointment from the governor. The right of suffrage is vested in every white male citizen, who shall have resided in the state one year, and in the county where he votes, five months, paupers, idiots, insane persons, and criminals, excepted.

History.—The territory of the present state of New Jersey was formally included, in part, in New Swedenland, which lay on the west side of the Delaware, as far

NEW JERSEY

Scale of Miles

up as Trenton falls, and was purchased of the Indians, and settled by the Swedes, in 1638. It also formed a part of the Dutch province of New Netherlands, and was included within the jurisdiction of Governor Stuyvesant, in 1655. The first permanent settlement within the present limits of this state was made at Bergen, in 1623, by the Danes. In 1664, Charles II., of England, having granted to his brother James, the duke of York, the whole territory from Connecticut river to the shores of the Delaware, the latter immediately compelled the Dutch and Swedes to surrender, and took possession of the province, with its subordinate settlements west of the river, except the present state of New Jersey, which he conveyed to Sir George Carteret, and Lord Berkeley, who were already proprietors of Carolina. In 1673, the Dutch regained all their former possessions, including New Jersey, but relinquished them to the English again, in 1674. After this event, the duke of York obtained a second charter, confirming the former grant, and restored to Berkeley and Carteret their former rights. Berkeley sold his share of the territory, which two years afterward, fell into the hands of William Penn and two other quakers, and the province was divided into "East Jersey" and "West Jersey." The former was governed by Carteret, and the latter by the quakers. In 1682, after the death of Carteret, East Jersey was sold to Penn, and eleven other individuals of the same order and faith, who were joined by twelve partners, and were known as the "twenty-four proprietors." The celebrated Robert Barclay was appointed governor for life. In 1688, the whole province was placed under the jurisdiction of Andros, who had already become royal governor over New England and New York. From this time, up to 1702, the country remained in an unsettled condition; the people surrendered their powers of government to the crown, making New Jersey a royal province, and uniting it to New York. From this period, up to 1738, the province remained under the jurisdiction of New York, but had a distinct legislative assembly, and a separate government was instituted, which continued in force until the American Revolution. The state constitution was formed in 1776, and the constitution of the United States adopted in 1787. Motto of the seal, "Liberty and Independence."

NEW LONDON COUNTY, situated at the southeast corner of Connecticut, and traversed by Thames river, with the Connecticut on the west. Area 600 square miles. Face of the country, hilly; soil, productive. Seats of justice, Norwich and New London. Pop. in 1810, 34,707; in 1820, 35,943; in 1830, 42,295; in 1840, 44,463; in 1850, 51,822.

NEW LONDON, city, seat of justice, together with Norwich, of New London co., Ct., 44 ms. S. E. of Hartford; from W. 353 ms. occupies a gentle elevation facing the southeast, on the west bank of the Thames river, three miles from its entrance into Long Island sound. The ground on which it stands is rocky and rough, and seems to have discouraged the builders from attempting to construct it with regularity. The houses erected within a few years, however, are superior to the rest, and the appearance of the town is much improved.

New London harbor is deep and convenient, although its entrance is narrow, and might be easily blockaded, if it were not defended by two fortifications. Fort Griswold, in Groton, opposite the city, and Fort Trumbull, one mile below, shared severely the struggles of the Revolution, and the former, especially, was the scene of bloody barbarities under Benedict Arnold, who, in 1781, entered the harbor, took Fort Griswold, and burned the town. An obelisk of granite, 125 feet high, preserves the memory of the patriots who here suffered and died.

The business of the city is chiefly whale-fishing and commerce; its tonnage is larger than that of any other town in the state.

The Worcester and Norwich railroad unites with the Thames at Allyn's Point, a few miles above.

The population in 1810, was 3,238; in 1820, 3,330; in 1830, 4,356; in 1840, 5,519; in 1850, 8,994.

NEW MEXICO TERRITORY, situated between 36° and 32° north latitude, and 103° and 116° longitude west from Greenwich, and is bounded north by Utah and Nebraska territories, east by Nebraska territory and Texas, south by Mexico and west by California and Utah. Its superficial area is about 211,000 square miles.

Physical Aspect.—The general appearance of the country is a vast, fertile valley in the middle, running north and south, formed by the Rio Grande. This valley is generally about twenty miles wide, bounded on the east and west by mountain ranges. There are some valleys of less extent along the borders, smaller streams, and a few spaces of elevated land. East of the Rocky mountains there are prairies and plains, and a portion of the great American desert. The soil in the valley of the Rio Grande in New Mexico is generally sandy, and looks poor, but by irrigation it produces abundant crops. The most fertile part of the valley begins below Santa Fe, along the river, where it is not uncommon to raise two crops within one year. The dryness of the soil makes it necessary to employ irrigation.

Mountains.—The Rocky mountain range traverses the eastern part of New Mexico, bearing different names at different points. South of Santa Fe it rises to 6,000 or 8,000 feet, while to the north some snow-capped peaks are seen which rise to from 10,000 to 12,000 feet above the sea-level. The Sierra Madre or Anahuac range stretches northward from the Mexican Cordillera through the centre of the territory, and the Wahsatch mountains lie near the western boundary.

Rivers and Lakes.—The principal river of New Mexico is the Rio Grande del Norte. Its head waters are found in the Rocky mountains, and flowing south it enters the gulf of Mexico, forming, in the lower part of its course, the boundary line between Mexico and the United States. Its length is about 2,000 miles, and it is navigable for steamboats, about 700 miles from its mouth. Its principal tributaries are, the Chama, Pecos, Conchos, Salado, Alamo, and San Juan. The Colorado, which empties into the gulf of California, forms part of the western boundary, until it extends into the territory. The Gila, which flows westward, extends along the southern boundary until reaching its source

in the Sierra Madre range; its principal branches are San Francisco and Salt rivers. About 100 miles south-east of Santa Fe, on the high table-land east of the Rio Grande, are several salt lakes, which furnish the country with salt.

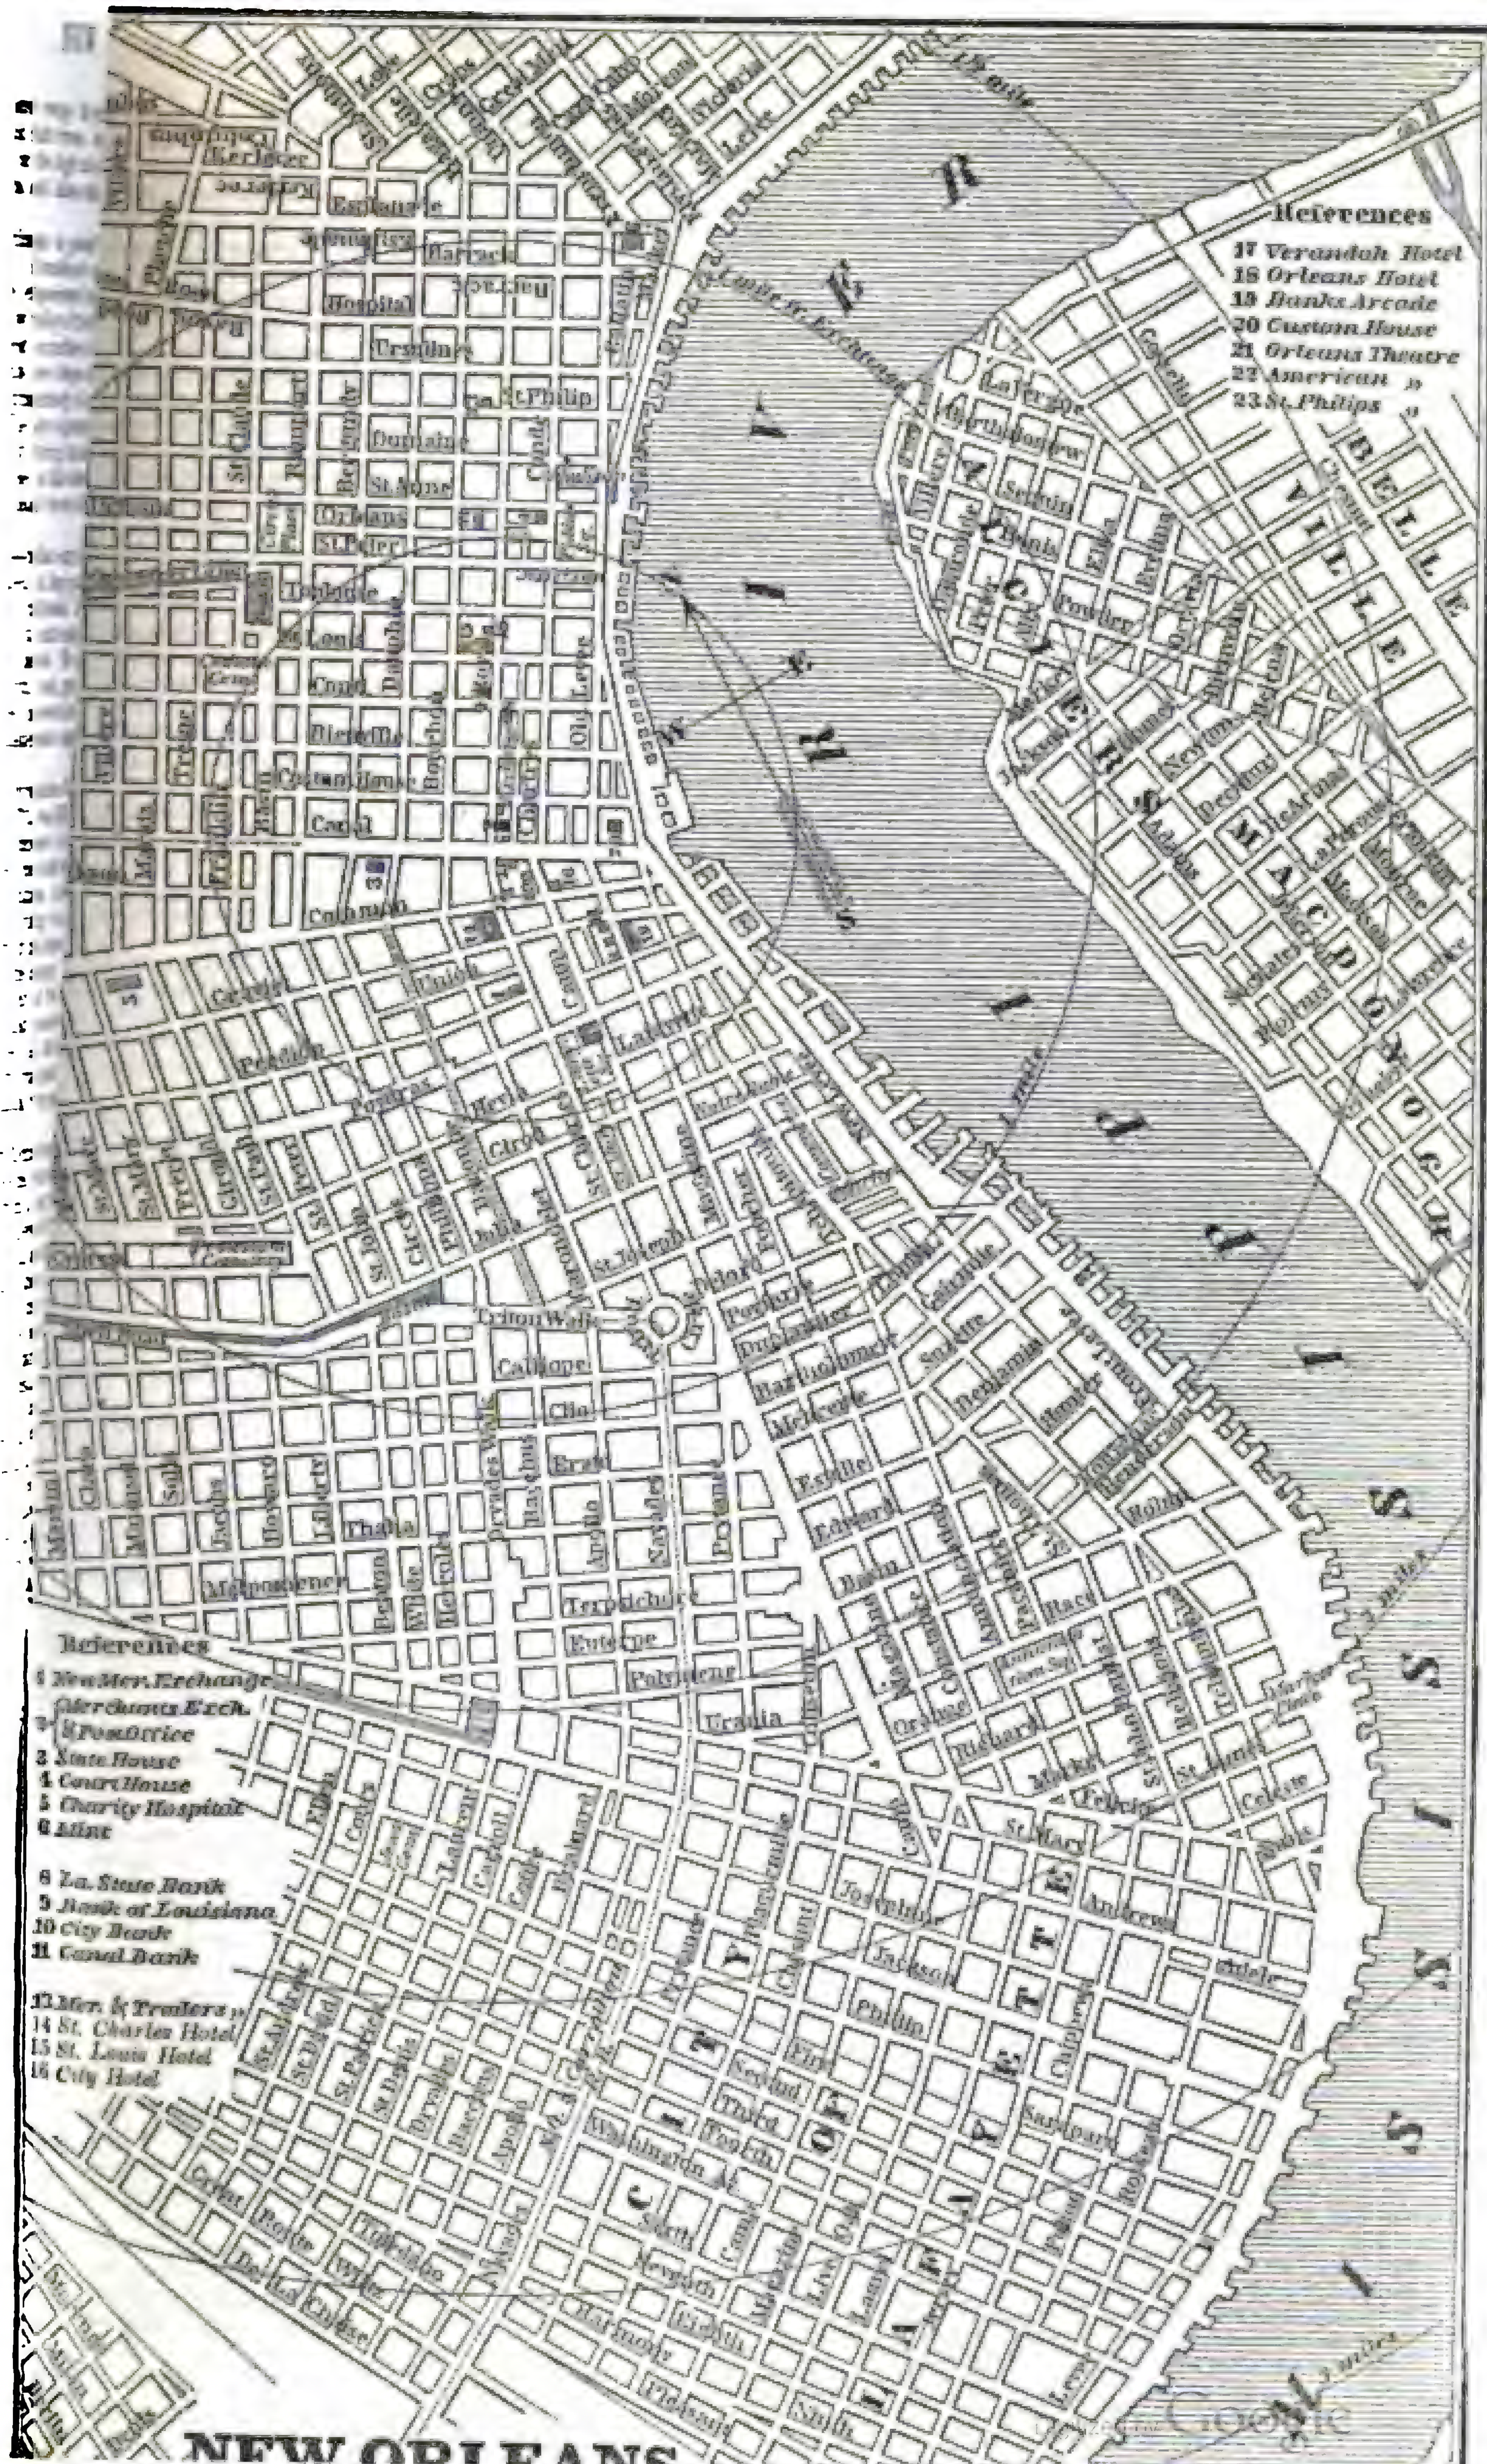

Climate.—The climate is generally temperate, constant, and healthy. Considerable atmospheric differences, however, are experienced in the mountain districts and in the low valley of the river. In the latter the summer heat sometimes rises to 100° Fahrenheit, but the nights are always cool and pleasant. The winters are comparatively of long duration, and frequently severe. The sky is generally clear, and the atmosphere dry, except during the rainy season, from July to October. Disease is little known, except some inflammations and typhoid fevers in the winter season.

Productive Resources.—Indian corn, wheat, beans, cottons, and fruits, are raised in large quantities, and the grape-vine is extensively cultivated. The inhabitants pay considerable attention to cattle-raising, and are possessed of large flocks and herds. The country is rich in gold, silver, copper, iron, coal, gypsum, and salt. None but the silver mines, however, have been much wrought. There are considerable domestic manufactures.

Population.—The whole population of New Mexico, according to the census of 1793, was 30,953; in 1831 it was estimated at 52,360, composed of one twentieth Spaniards, one fifth Creoles, one fourth Mestizos of all grades, and one half Pueblo Indians. In 1842, the population was 57,036; and according to the census of 1850, 61,547. This is exclusive of the independent tribes of Indians which still exist in the country.

Government.—The government of New Mexico is similar to that of Utah, and that generally applied to territories of the United States. All citizens of adult ages are voters, and elect a territorial legislature. The governor and judges are appointed by the president of the United States.

History.—The history of New Mexico lies very much in the dark. The Spaniards, it seems, received the first information about it in 1581, from a party of adventurers under Captain Francisco de Leyva Bonillo, who, upon finding the aboriginal inhabitants and the mineral wealth of the country to be similar to those of Mexico, called it New Mexico. In 1594, the then viceroy of Mexico, Count de Monterey, sent the gallant Juan de Onate, of Zacatecas, to New Mexico, to take formal possession of the country in the name of Spain, and to establish colonies, missions, and presidios (forts). They found a great many Indian tribes and settlements, which they succeeded in Christianizing in the usual Spanish way, with sword in hand, and made them slaves. The villages of the Christianized Indians were called Pueblos, in opposition to the wild and roving tribes that refused such favors. Many towns, of which only ruins exist now, were established at that time; many mines were worked, and the occupation of the country seemed to be secured, when, quite unexpectedly, in 1680, a general insurrection of all the Indian tribes broke out against the Spanish yoke. The Spaniards were either massacred or driven southward, where they founded Paso del Norte. The country was not recovered for ten or twelve years. Several insurrections have since occurred, but none so universal or disastrous as this one. This country followed the fate of Mexico after the revolution that overthrew the Spanish power. The history of New Mexico previous to the invasion by the Americans, has little to arrest attention. It is a continuous record of barbarism and tyranny. On the 8th of September, 1846, Santa Fe was captured by the Americans under General Kearney, and soon after several of the river towns were visited on his route to California. A civil government was now established. On the 19th of January, 1847, an insurrection broke out against the Americans, and in several pueblos many Americans were murdered. Taos, Arroyo-Hondo, and Rio Colorado, were the chief scenes of strife. The battles of La Canada and El Embudo also occurred in this month, and in February the battle of Taos; in all of which the Mexicans were completely vanquished. Some few skirmishes occurred after these, but none of importance. From this period the United States authorities exercised exclusive power. On the 31 of February, 1848, a treaty of peace and cession was signed at Guadalupe Hidalgo, by which New Mexico was assigned to the Union. On the 9th of Sep-

rally of wood, or brick, the former white and neat, the latter substantial and elegant. Toward the west, the elevated ground affords a commanding site for residences; and the courthouse, which is a large structure of brown freestone, in the Egyptian style of architecture. The materials for this, were wrought from the neighboring quarries, which furnish large quantities of material for buildings in New York and elsewhere. The New Jersey railroad, connecting New York with Newark, Trenton, and Philadelphia, here enters a splendid depot, which is one of the most prominent buildings in the city. The Morris and Essex railroad also terminates here. Newark has also a number of churches, of which some are elegant and beautiful; also several banks, literary institutions, and libraries.

In proportion to its population, few cities are more extensively engaged in manufactures. Whalebone, oil, carriages, varnish, leather, shoes, candles, soap, harness, machinery, castings, zinc, paint, and glass, are among the articles most largely produced.

Steamboats ply several times a-day to New York; and the Morris canal, traversing the fruitful county from which it is named, has contributed much to the trade and prosperity of the place.

The population in 1810, was 5,000 (in whole township, 8,008); in 1820, 6,507; in 1830, 10,953; in 1840, 17,290; in 1850, 38,893.

NEW BEDFORD, c. h., p. t., seat of justice together with Taunton of Bristol co., Mass., 58 ms. S. of Boston; from W. 434 ms. The town is built on a bold elevation, contains many fine buildings, and appears with advantage from the harbor. A bridge across the Acushnet leads to Fairhaven, on the opposite side. No other place in the country is engaged so exclusively and extensively in the whaling business as this. About \$5,000,000 of capital, and two hundred vessels are employed.

The New Bedford and Taunton railroad joins the Boston and Providence railroad at Mansfield, and communicates with this place.

The population in 1810, was 5,651; in 1820, 3,947; in 1830, 7,592; in 1840, 12,087; in 1850, 16,443.

NEWBURYPORT, city, seat of justice, together with Salem and Ipswich, of Essex co., Mass., situated on the south bank of Merrimack river, three miles from its entrance into the ocean, and 30 miles north of Boston. It embraces about one mile square with regular streets, those parallel with the river rising one above the other, after the manner of terraces. That nearest the water is occupied by stores and warehouses, and the higher ones by neat and commodious dwellings, which command a beautiful prospect of the harbor and ocean. A road and bridge lead to Plum Island, at the mouth of the river, which is a pleasant summer resort. A suspension bridge and a railroad bridge extend across the Merrimack to Salisbury. The harbor is ample, and is protected by a breakwater, but is obstructed by a sand-bar at its entrance. Newburyport has been and is still extensively engaged in commerce and fisheries; and although of late its maritime trade has diminished, its population and general prosperity has increased. The town contains a customhouse, of rough granite, with a Grecian Doric portico, churches, a courthouse, jail, market, and other public buildings. The Eastern railroad from Boston and Salem, enters the place, and unites it to the Portsmouth, Portland, and Saco railroads.

The pop. in 1810, was 7,634; in 1820, 6,852; in 1830, 6,375; in 1840, 7,161; in 1850, 9,532.

NEW HAMPSHIRE, one of the United States so named by John Mason, to whom a portion of its territory was granted, in 1623, after Hampshire in England, the county from which he emigrated. It lies between 42° 41' and 45° 11' north latitude, and 70° 40' and 72° 28' west longitude from Green-

wich, and is bounded north by Canada East, east by Maine, from which it is separated in part by Salmon Fall river; southeast by the Atlantic; south by Massachusetts; and west by Connecticut river, which separates it from Vermont. Superficial area, 9,411 square miles.

Physical Aspect.—Taking into consideration the small extent of surface in this state, it is more varied in its natural features than any other in the Union. Commencing at the seashore, we find a sandy beach, bordered by extensive salt marshes, which are intersected by numerous creeks. In the midst of this beach there is a bold promontory, called the "Boar's Head." For the first twenty or thirty miles from the sea, the country is either level, or variegated by rolling swells, fertile valleys, and small conical hills. The remainder of the state is greatly diversified by sloping woodlands, rich intervals, rugged mountains, fruitful valleys, foaming cascades, crystal rivers, and silvery lakes, which, from their wild and picturesque effect, have distinguished this country as the "Switzerland of America." The soil is as varied in its character as the surface; a considerable portion is fertile, and it is generally better adapted to grazing than tillage. The "interval lands," on the borders of the large rivers, are esteemed as the most valuable, particularly if they are enriched by annual floods. The uplands, of an uneven surface, and of a warm, moist, stony soil, are regarded as the best for grazing. The sandy, pine plains are the poorest, and often are of little or no use, except for growing wood.

Mountains.—The most considerable of these are the White mountains, the Monadnock, Mooshillock, Ossipee, Sunipec, Patuckoway, and Kearsarge.

Rivers, Lakes, and Bays.—The principal rivers are, the Connecticut, Merrimack, Androscoggin, Salmon Fall, Piscataqua, Exeter, or Swamescot, Saco, Upper and Lower Ammonoosuc, Sugar, Ashuelot, Winnipiseogee, Contoocook, Lamprey, Nashua, Margalloway, and Piscataquog. The chief lakes are the Winnipiseogee, Umbagog, Ossipee, Massabesick, Sunipec, Newfound, and Squam. There are two "Great bays" in this state; the largest situated at the confluence of Swamescot, Winnicut, and Lamprey rivers; the other at the southwest corner of Lake Winnipiseogee. Merry-meeting bay is situated at the easterly end of the same lake.

Islands.—The only islands worthy of note are the Isles of Shoals, seven in number, off Portsmouth harbor, and numerous islets in Winnipiseogee lake. Of the latter, Long Cow, and Davis's, are the largest, and are in a high state of cultivation.

Climate.—The climate, like that of the states adjacent, is subject to the extremes of heat and cold, but the air is generally salubrious and pure. Along the seaboard, invalids subject to complaints of the lungs generally suffer from the ocean winds. Morning and evening fires become necessary from September till May. The streams are generally locked up in ice, and in the open country the snow often abides on the earth from November till April, and in the woods till May or June.

Productive Resources.—The chief products of this state are, horses, mules, horned cattle, sheep, swine, poultry, eggs, sugar, butter, cheese, hay, wood, lumber, wheat, rye, barley, oats, buckwheat, potatoes, and Indian corn. Of the mineral resources there are iron, lead, silver, tin, zinc, magnesia, soap-stone, granite, felspar, and mica.

Manufactures.—The principal manufactures, of this state are cotton and woollen goods, cast-iron, paper, leather, boots and shoes, carriages, furniture, hats, pottery-ware, mechanical and agricultural instruments, &c.

NEWBURYPORT, city, seat of justice, together with Salem and Ipswich, of Essex co., Mass., situated on the south bank of Merrimack river, three miles from its entrance into the ocean, and 30 miles north of Boston. It embraces about one mile square with regular streets, those parallel with the river rising one above the other, after the manner of terraces. That nearest the water is occupied by stores and warehouses, and the higher ones by neat and commodious dwellings, which command a beautiful prospect of the harbor and ocean. A road and bridge lead to Plumb Island, at the mouth of the river, which is a pleasant summer resort. A suspension bridge and a railroad bridge extend across the Merrimack to Salisbury. The harbor is ample, and is protected by a breakwater, but is obstructed by a sand-bar at its entrance. Newburyport has been and is still extensively engaged in commerce and fisheries; and although of late its maritime trade has diminished, its population and general prosperity has increased. The town contains a customhouse, of rough granite, with a Grecian Doric portico, churches, a courthouse, jail, market, and other public buildings. The Eastern railroad from Boston and Salem, enters the place, and unites it to the Portsmouth, Portland, and Saco railroad.

The pop. in 1810, was 7,634; in 1820, 6,852; in 1830, 6,375; in 1840, 7,161; in 1850, 9,532.

NEW HAMPSHIRE, one of the United States so named by John Mason, to whom a portion of its territory was granted, in 1623, after Hampshire in England, the county from which he emigrated. It lies between 42° 41' and 45° 11' north latitude, and 70° 40' and 72° 28' west longitude from Green-

wich, and is bounded north by Canada East, east by Maine, from which it is separated in part by Salmon Fall river; southeast by the Atlantic; south by Massachusetts; and west by Connecticut river, which separates it from Vermont. Superficial area, 9,411 square miles.

Physical Aspect.—Taking into consideration the small extent of surface in this state, it is more varied in its natural features than any other in the Union. Commencing at the seashore, we find a sandy beach, bordered by extensive salt marshes, which are intersected by numerous creeks. In the midst of this beach there is a bold promontory, called the "Boar's Head." For the first twenty or thirty miles from the sea, the country is either level, or variegated by rolling swells, fertile valleys, and small conical hills. The remainder of the state is greatly diversified by sloping woodlands, rich intervals, rugged mountains, fruitful valleys, foaming cascades, crystal rivers, and silvery lakes, which, from their wild and picturesque effect, have distinguished this country as the "Switzerland of America." The soil is as varied in its character as the surface; a considerable portion is fertile, and it is generally better adapted to grazing than tillage. The "intervale lands," on the borders of the large rivers, are esteemed as the most valuable, particularly if they are enriched by annual floods. The uplands, of an uneven surface, and of a warm, moist, stony soil, are regarded as the best for grazing. The sandy, pine plains are the poorest, and often are of little or no use, except for growing wood.

Mountains.—The most considerable of these are the White mountains, the Monadnock, Mooschillock, Ossipee, Sunipsee, Patuckoway, and Kearsarge.

Rivers, Lakes, and Bays.—The principal rivers are, the Connecticut, Merrimack, Androscoggin, Salmon Fall, Piscataqua, Exeter, or Swamscot, Saco, Upper and Lower Ammonoosuc, Sugar, Ashuelot, Winnipiseogee, Contoocook, Lamprey, Nashua, Margalloway, and Piscataquog. The chief lakes are the Winnipiseogee, Umbagog, Ossipee, Massabesick, Sunipsee, Newfound, and Squam. There are two "Great bays" in this state; the largest situated at the confluence of Swamscot, Winnicut, and Lamprey rivers; the other at the southwest corner of Lake Winnipiseogee. Merry-meeting bay is situated at the easterly end of the same lake.

Islands.—The only islands worthy of note are the Isles of Shoals, seven in number, off Portsmouth harbor, and numerous islets in Winnipiseogee lake. Of the latter, Long Cow, and Davis's, are the largest, and are in a high state of cultivation.

Climate.—The climate, like that of the states adjacent, is subject to the extremes of heat and cold, but the air is generally salubrious and pure. Along the seaboard, invalids subject to complaints of the lungs generally suffer from the ocean winds. Morning and evening fires become necessary from September till May. The streams are generally locked up in ice, and in the open country the snow often abides on the earth from November till April, and in the woods till May or June.

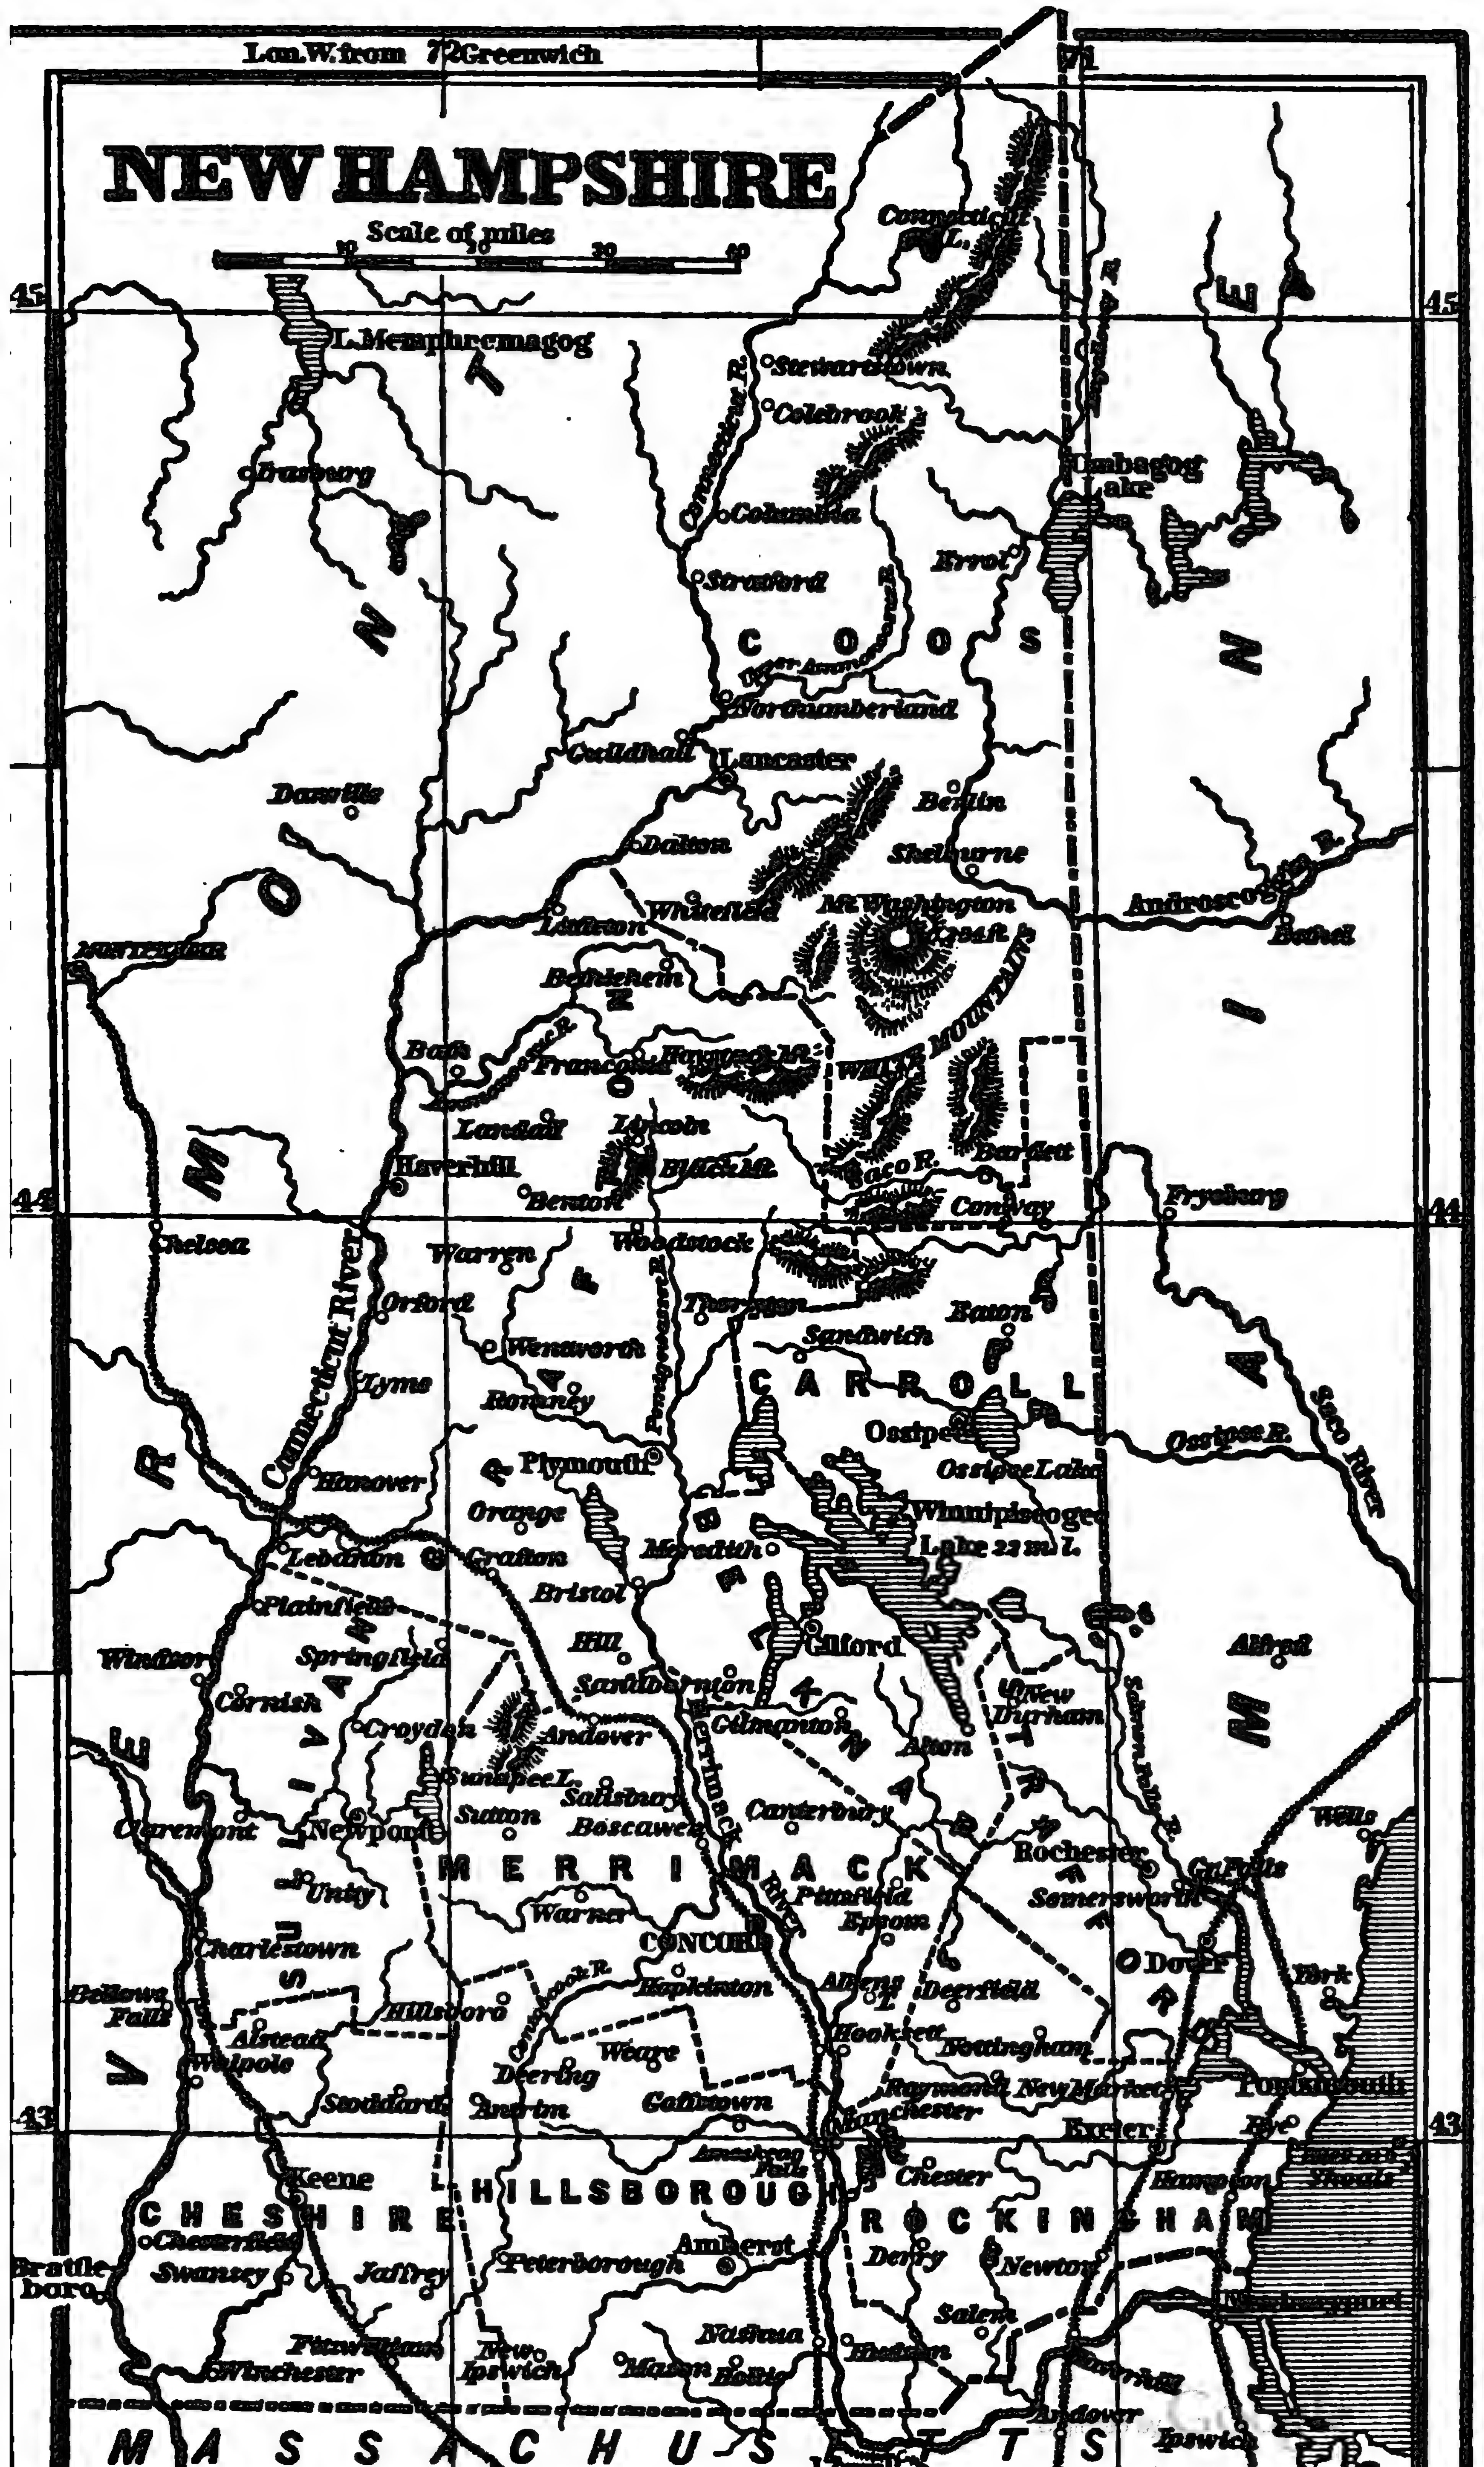

Productive Resources.—The chief products of this state are, horses, mules, horned cattle, sheep, swine, poultry, eggs, sugar, butter, cheese, hay, wood, lumber, wheat, rye, barley, oats, buckwheat, potatoes, and Indian corn. Of the mineral resources there are iron, lead, silver, tin, zinc, magnesia, soap-stone, granite, feldspar, and mica.

Manufactures.—The principal manufactures, of this state are cotton and woollen goods, cast-iron, paper, leather, boots and shoes, carriages, furniture, hats, pottery-ware, mechanical and agricultural instruments, &c.

Lon.W. from 72 Greenwich

NEW HAMPSHIRE

Scale of miles

Railroads and Canals.—There are about 600 miles of railroads in New Hampshire, a large proportion of them radiating from Concord, the political capital of the state, to almost every point of the compass. The only canals in the state are those for facilitating the navigation of the Merrimack river.

Commerce.—New Hampshire has but the single port of Portsmouth on the Atlantic, and its direct foreign commerce heretofore has been extremely small, amounting in the aggregate to less than \$60,000 in 1851; but the increased facilities afforded by the opening of railroad communication between Portsmouth and the interior of the state will materially enlarge its foreign trade. The shipping owned within the state amounts to about 23,000 tons.

Education.—The principal literary institutions of the state are, Dartmouth college, at Hanover, attached to which is the New Hampshire medical school; and theological seminaries at Gilmanton, Concord, and New Hampton. There are also 70 or 80 academies, and about 3,000 common schools throughout the state.

Population.—In 1790, 141,899; in 1800, 183,762; in 1810, 214,360; in 1820, 244,161; in 1830, 269,328; in 1840, 284,574; in 1850, 317,964. Number of slaves in 1790, 158; in 1800, 8; in 1840, 1.

Government.—The legislative power is vested in a senate, of 12 members, and house of representatives, of about 300 members, and the executive power in a governor and five councillors, all elected by the people, the second Tuesday in March. The right of suffrage is vested in every male inhabitant, of twenty-one years, excepting paupers and persons not taxed. The judiciary power is vested in a superior court, and court of common pleas. Judges are appointed by the governor and council during good behavior, or until seventy years of age.

History.—The first permanent settlements in New Hampshire were made at Little Harbor, Portsmouth, and Dover, in 1623. In 1641, all the colonists of this state placed themselves under the protection of Massachusetts, and formed a part of the county of Norfolk. In 1679, it was again constituted a separate province by Charles II., and in 1680, the first assembly convened. In 1690 it reunited with Massachusetts, from which, two years after, it was again separated, against the wishes of the people. In 1695, the two provinces were placed under the jurisdiction of New York, but were reunited in 1702, and thus continued until 1741, when a separate governor was appointed over each, and New Hampshire ever after constituted a distinct government. During the war of independence the government was conducted by a temporary administration. The state constitution was established in 1784, which, with the amendments of 1792, forms the one at present in force. In 1788, this state, in convention, adopted the constitution of the United States.

NEW HAVEN, city, seat of justice of New Haven co., and capital, together with Hartford, of Connecticut, situated on a bay of Long Island sound, which is here about twenty miles broad. It is 76 miles northeast of New York, and 300 miles from Washington. The city is built on a plain, on gentle slope, at the foot of two bold spurs from the Green Mountain range, which here terminate in two abrupt cliffs, called "East Rock" and "West Rock," rising like sentinels on either side. From the top of these, the eye beholds a wide and enchanting prospect. Below the feet, New Haven lies in quiet beauty, with its white mansions and steeples embowered amid clusters of rich foliage. Far around stretch hills, slopes, and valleys, rich with the colors of nature and cultivation; away to the south and east, like an ocean, spreads the sound, sprinkled here and there by a mote-like sail, and dimly bounded by the cloud-like shores of Long Island. New Haven is one of the most beautiful of cities. Its streets are broad and regular; tasteful, chaste, and splendid buildings are surrounded by pleasant gardens, parks, and trees. Many of these are elms, stately and venerable, planted by the fathers of the town, and cherished, with commendable pride and care, by their descendants. This profusion of foliage and freedom from contracted and uncleanly streets, combine for New Haven the advantages of the city and the country. The "Green" is a pleasant spot of ground, shaded by rows of lofty elms; in the centre stand the three oldest churches in the city. Toward the west is the statehouse, a large and imposing structure; still further to the west, are the buildings of Yale College, one of the oldest, most flourishing, and respectable institutions of America. Hillhouse avenue, bordered by sides of undulating green, from which spring rows of stately trees, runs between splendid mansions and gardens, that rival Italian villas in loveliness. Northwest of the city, is the cemetery, beautifully laid out, and adorned with an imposing entrance in Egyptian architecture.

The harbor is spacious, but so shallow that large vessels are obliged to anchor at Long wharf, which, from time to time, has been extended to a length of 3,943 feet. New Haven prosecutes an extensive coasting-trade with New York and the towns along the sound. Several ships from foreign shores also make this city their port. The New York and New Haven railroad has largely increased the communication between the two cities, and the New Haven and Hartford railroad joins the lines at Springfield, which traverse the valley of Connecticut river, and other parts of Massachusetts.

The population in 1810, was 5,772; in 1820, 7,147; in 1830, 10,180; in 1840, 14,890; in 1850, 20,345.

NEW JERSEY, one of the U. States, so named after the island of Jersey, on the coast of France, of which Sir George Carteret, to whom New Jersey was conveyed, in 1664, was formerly governor. It lies between 38° 57' and 41° 22' north latitude, and 73° 58' and 75° 29' west longitude from Greenwich, and is bounded

north by New York, east by the Hudson river, Staten Island sound, and the Atlantic, southeast by Delaware bay, which separates it from Delaware, and west by Delaware river, which separates it from Pennsylvania. It has a superficial area of 8,320 square miles.

Physical Aspect.—The state presents a great diversity of surface, as well as of soil. The northern portions are mountainous, interspersed with rich valleys, and extensive tracts, well adapted for grazing, and for the plough. An elevated range, called the "Palisades," commences near Hoboken, and extends along the Hudson for miles, forming a perpendicular wall of stone, which at some points is 500 feet high. The middle portions are less hilly than the northern, and much of the soil is fertile, and well tilled. The southern counties are principally composed of a long range of level country, commencing near Sandy Hook, and lines the whole coast of the middle states. Much of this range is sandy, and nearly barren, producing little else than small oaks and yellow pine; in other cases, swamps of white cedar occur. In the southern section along the Atlantic and Delaware bay, there are extensive marshes, which are monthly inundated by the tides. A stratum of green-sand marl in some places thirty feet thick, underlies the surface throughout the length of this tract, which has been extensively used as a fertilizer in reclaiming the land.

Mountains.—In the northwesterly part of the state there are two ranges, subordinate to the Alleghanies, one called South mountain, and the other, Blue mountain, or Kittatinny ridge. The more prominent points of the former are designated by the names of Mosconetcong, Schooley's, Hamburg, Wawayanda, and Bear

Mountains. The other elevations worthy of note are Mine, Trowbridge, Second, and Ramapo mountains.

Rivers and Bays.—The principal rivers are the Hudson, and Delaware, its eastern and western boundaries; the Raritan, the Passaic (the great falls of which, above Paterson, have a perpendicular descent of seventy feet), Hackensack, Egg Harbor, Great Egg Harbor, Shrewsbury, Toma, Maurice, Delaware, and Moconetcong. The chief bays are the Delaware, Newark, New York, Raritan, Sandy Hook, Barnegat, Little and Great Egg Harbors, and Grassy.

Climate.—The climate along the seaboard, and in the valleys of the interior may be regarded as mild, though the former is often rendered disagreeable by ocean winds. In the mountainous region, at the north, the winters are cold, and often severe. The range of temperature varies from a few degrees below zero to 90° above. The air is remarkably pure, and usually salubrious, except in summer and autumn, near marshes and streams.

Productive Resources.—The chief products are horses, mules, neat cattle, sheep, swine, poultry, eggs, butter, shad, oysters, cheese, fruit, cider, wine, flax-seed, wax, pitch, tar, resin, turpentine, silk, wool, lumber, hay, wheat, rye, barley, buckwheat, oats, potatoes, and Indian corn. Of the mineral and fossil resources of this state, iron and zinc are the most abundant, and their ores are extensively wrought. An extensive bed of phosphorite, a native phosphate of lime, has been opened in Morris county, which promises to add much to the agricultural wealth of the state.

Manufactures.—The manufactures of New Jersey are numerous, embracing almost every variety of goods. Cotton and woollen mills are established in many parts of the state; silk and linen goods are manufactured to a considerable extent; also, machinery, hardware, railroad-cars, carriages, fire-arms, jewelry, glass, earthen-ware, fire-brick, &c. There are also extensive tanneries, and other manufactories of leather. Whole villages are employed in boot and shoe making.

Railroads and Canals.—The great lines of railroad between New York and Pennsylvania traverse this state. Branch roads are also constructed from the central roads to the more important towns; making, in the aggregate, about 200 miles of railway in the state. The Delaware and Raritan, 42 miles, and Morris, 102 miles long, are the most important canals in this state.

Commerce.—The foreign commerce of New Jersey is small, on account of its proximity to New York; its coasting trade, however, is considerable. The shipping owned within the state amounts to about 80,000 tons.

Education.—The principal literary institutions are, the college of New Jersey, at Princeton, founded in 1738, and Rutgers college, at New Brunswick, founded in 1770, to both of which are attached theological seminaries, and to the former a law-school; and Burlington college, founded in 1846. There are about 100 academies, and 1,500 common schools in New Jersey.

Population.—In 1790, 184,139; in 1800, 211,949; in 1810, 249,555; in 1820, 277,575; in 1830, 300,823; in 1840, 373,306; in 1850, 489,555. Number of slaves in 1790, 11,423; in 1800, 12,422; in 1810, 10,851; in 1820, 7,657; in 1830, 2,254; in 1840, 674; in 1850, 222.

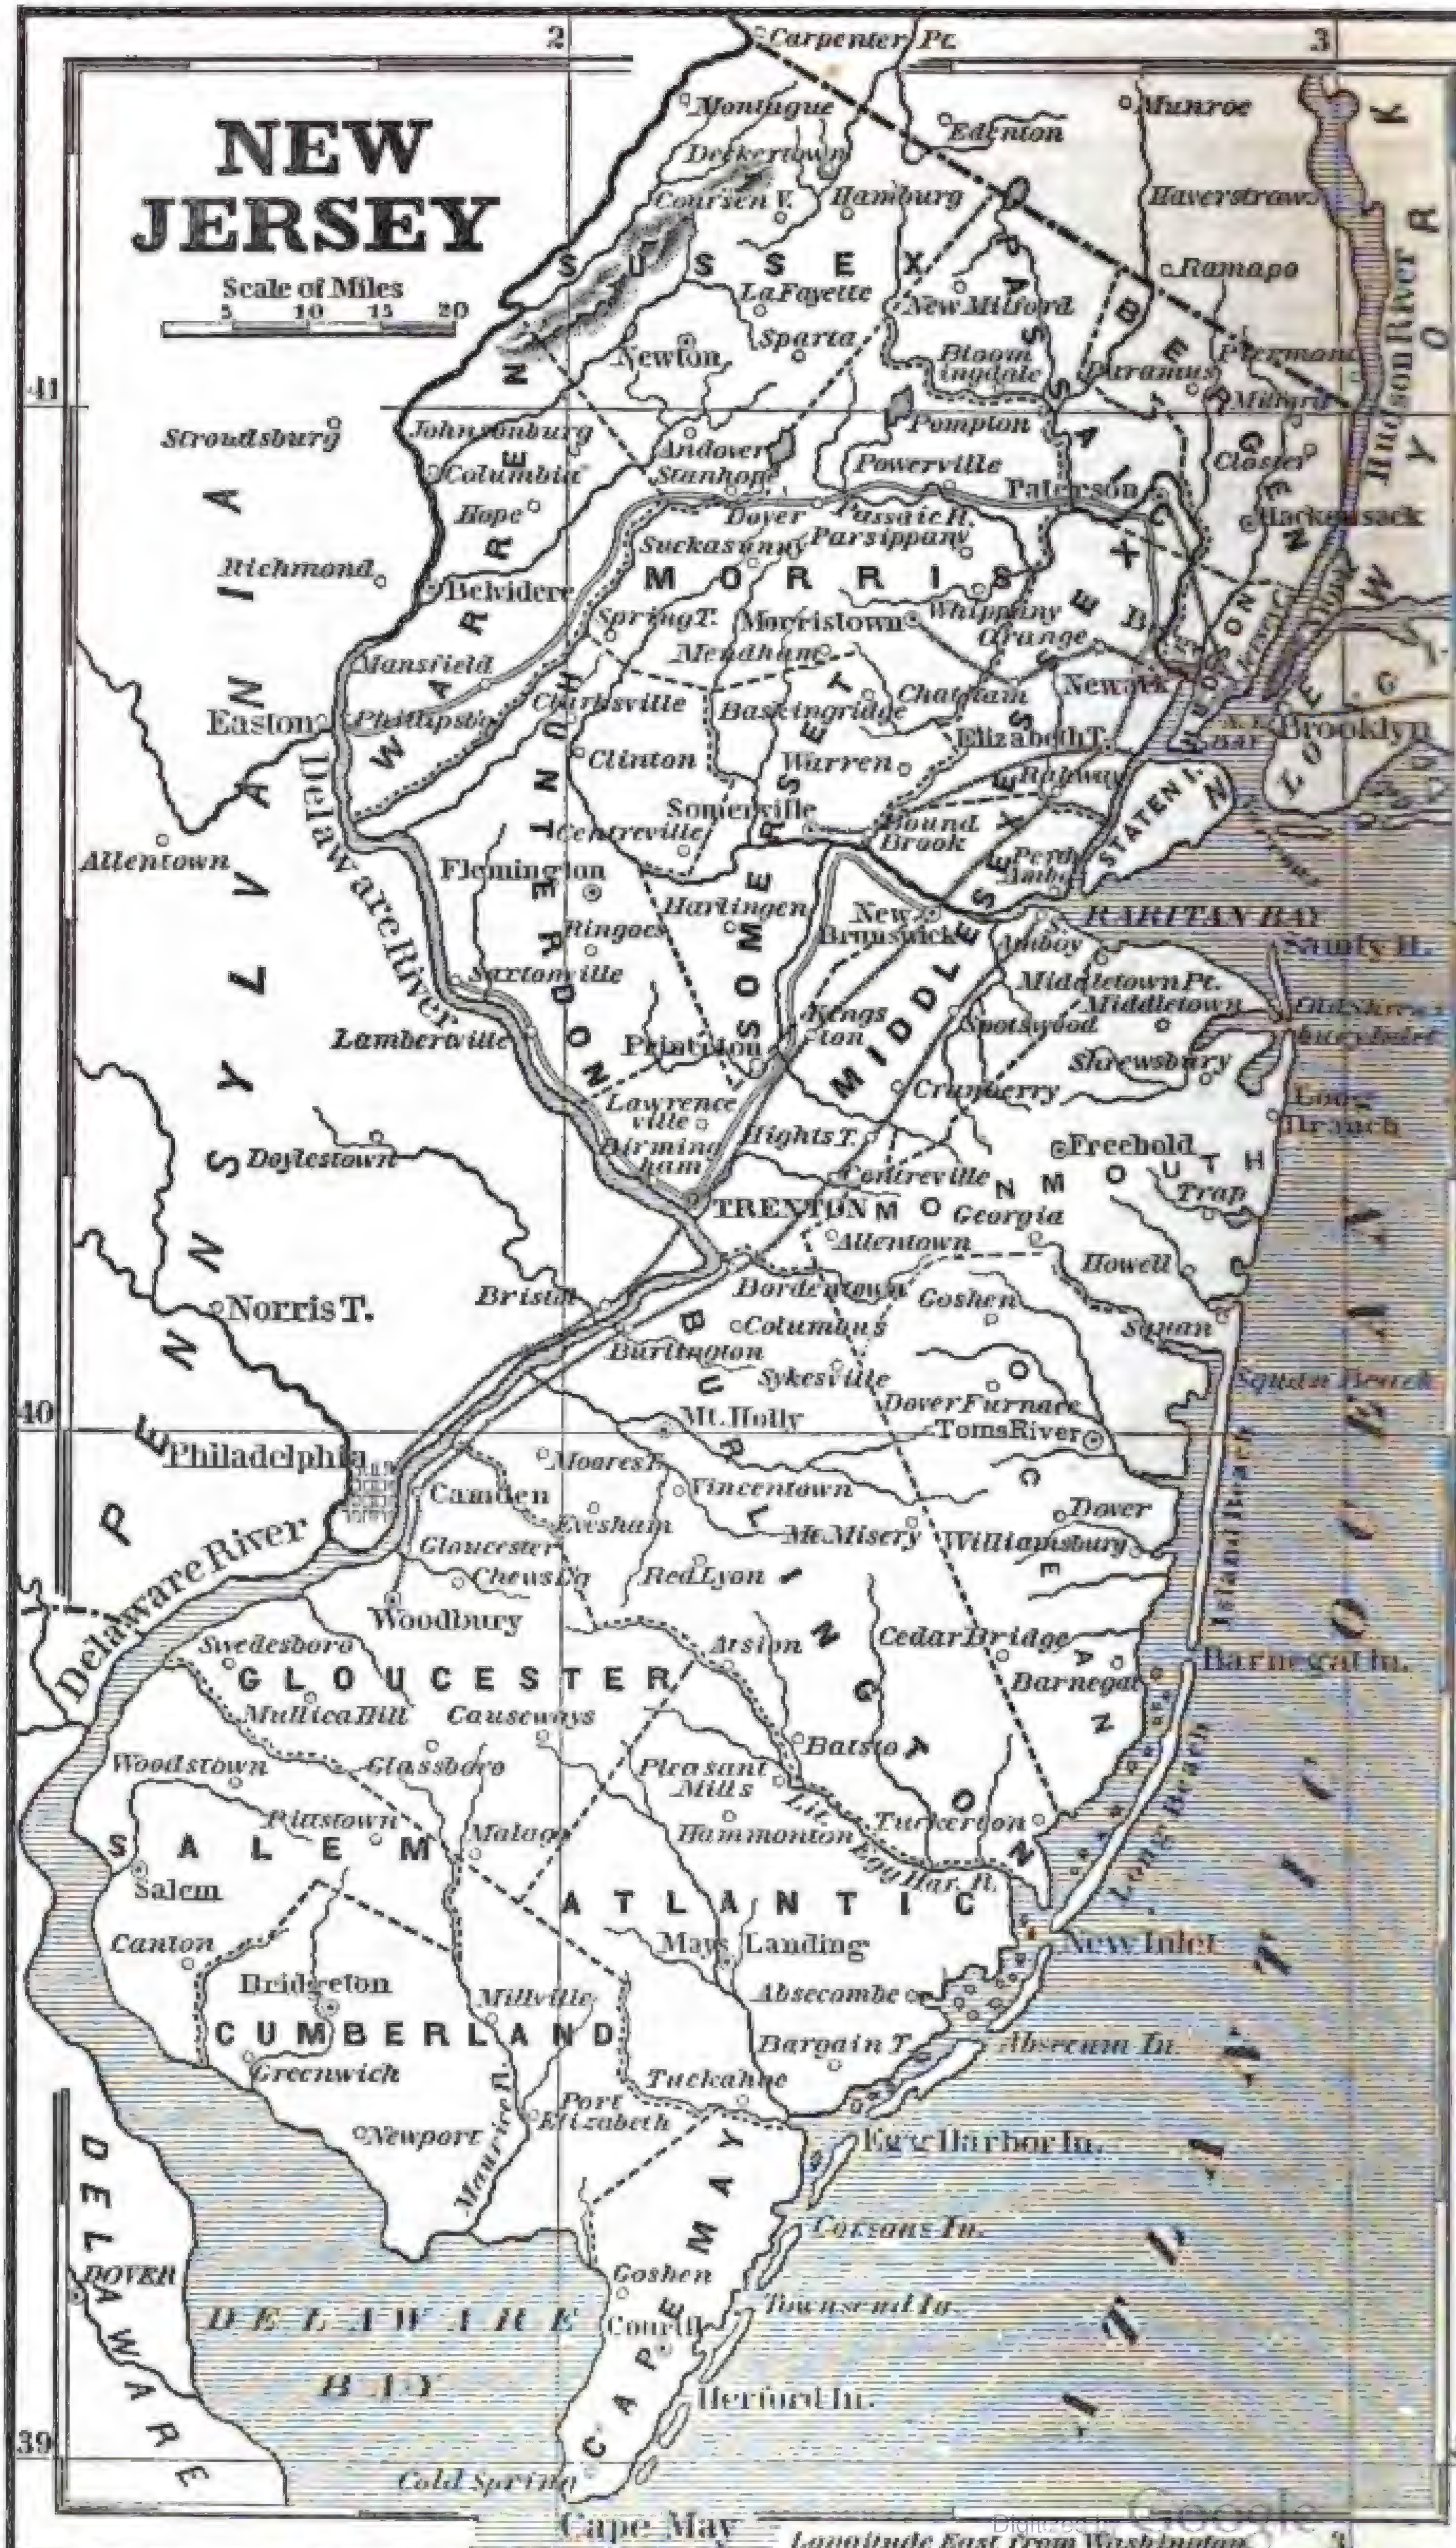

Government.—The legislative power is vested in a senate, elected for three years, one third renewed each year, and a general assembly, chosen annually, on the second Tuesday of October; the executive power in a governor, elected by the people, once in three years, at the general election, and is ineligible for the next term. The judiciary power is vested in a court of errors and appeals, composed of the chancellor, supreme court, and six other judges; a court for trial of impeachments; a court of chancery; a supreme court of five judges, and courts of common pleas. The chancellor and supreme court judges hold their offices for seven years; the six judges of the court of errors and appeals for six years, one judge vacating his seat each year in rotation; and the judges of the courts of common pleas for five years. The latter are chosen by the legislature; the others receive their appointment from the governor. The right of suffrage is vested in every white male citizen, who shall have resided in the state one year, and in the county where he votes, five months, paupers, idiots, insane persons, and criminals, excepted.

History.—The territory of the present state of New Jersey was formally included, in part, in New Swedenland, which lay on the west side of the Delaware, as far

NEW JERSEY

up as Trenton falls, and was purchased of the Indians, and settled by the Swedes, in 1638. It also formed a part of the Dutch province of New Netherlands, and was included within the jurisdiction of Governor Stuyvesant, in 1655. The first permanent settlement within the present limits of this state was made at Bergen, in 1623, by the Danes. In 1664, Charles II., of England, having granted to his brother James, the duke of York, the whole territory from Connecticut river to the shores of the Delaware, the latter immediately compelled the Dutch and Swedes to surrender, and took possession of the province, with its subordinate settlements west of the river, except the present state of New Jersey, which he conveyed to Sir George Carteret, and Lord Berkeley, who were already proprietors of Carolina. In 1673, the Dutch regained all their former possessions, including New Jersey, but relinquished them to the English again, in 1674. After this event, the duke of York obtained a second charter, confirming the former grant, and restored to Berkeley and Carteret their former rights. Berkeley sold his share of the territory, which two years afterward, fell into the hands of William Penn and two other quakers, and the province was divided into "East Jersey," and "West Jersey." The former was governed by Carteret, and the latter by the quakers. In 1682, after the death of Carteret, East Jersey was sold to Penn, and eleven other individuals of the same order and faith, who were joined by twelve partners, and were known as the "twenty-four proprietors." The celebrated Robert Barclay was appointed governor for life. In 1688, the whole province was placed under the jurisdiction of Andros, who had already become royal governor over New England and New York. From this time, up to 1702, the country remained in an unsettled condition; the people surrendered their powers of government to the crown, making New Jersey a royal province, and uniting it to New York. From this period, up to 1738, the province remained under the jurisdiction of New York, but had a distinct legislative assembly, and a separate government was instituted, which continued in force until the American Revolution. The state constitution was formed in 1776, and the constitution of the United States adopted in 1787. Motto of the seal, "Liberty and Independence."

NEW LONDON COUNTY, situated at the southeast corner of Connecticut, and traversed by Thames river, with the Connecticut on the west. Area 600 square miles. Face of the country, hilly; soil, productive. Seats of justice, Norwich and New London. Pop. in 1810, 34,707; in 1820, 35,943; in 1830, 42,295; in 1840, 44,463; in 1850, 51,822.

NEW LONDON, city, seat of justice, together with Norwich, of New London co., Ct., 44 ms. S. E. of Hartford; from W. 353 ms. occupies a gentle elevation facing the southeast, on the west bank of the Thames river, three miles from its entrance into Long Island sound. The ground on which it stands is rocky and rough, and seems to have discouraged the builders from attempting to construct it with regularity. The houses erected within a few years, however, are superior to the rest, and the appearance of the town is much improved.

New London harbor is deep and convenient, although its entrance is narrow, and might be easily blockaded, if it were not defended by two fortifications. Fort Griswold, in Groton, opposite the city, and Fort Trumbull, one mile below, shared severely the struggles of the Revolution, and the former, especially, was the scene of bloody barbarities under Benedict Arnold, who, in 1781, entered the harbor, took Fort Griswold, and burned the town. An obelisk of granite, 125 feet high, preserves the memory of the patriots who here suffered and died.

The business of the city is chiefly whale-fishing and commerce; its tonnage is larger than that of any other town in the state.

The Worcester and Norwich railroad unites with the Thames at Allyn's Point, a few miles above.

The population in 1810, was 3,238; in 1820, 3,330; in 1830, 4,356; in 1840, 5,519; in 1850, 8,994.

NEW MEXICO TERRITORY, situated between 39° and 32° north latitude, and 103° and 116° longitude west from Greenwich; and is bounded north by Utah and Nebraska territories, east by Nebraska territory and Texas, south by Mexico, and west by California and Utah. Its superficial area is about 211,000 square miles.

Physical Aspect.—The general appearance of the country is mountainous with a large valley in the middle running north and south, formed by the Rio Grande del Norte. This valley is generally about twenty miles wide, bordered on the east and west by mountain chains. There are some valleys of less extent along the borders of smaller streams, and a few spaces of elevated table-land. East of the Rocky mountains there are prairies and plains, and a portion of the great American desert. The soil in the valley of the Rio Grande in New Mexico is generally sandy, and looks poor, but by irrigation it produces abundant crops. The most fertile part of the valley begins below Santa Fe, along the river, where it is not uncommon to raise two crops within one year. The dryness of the soil makes it necessary to employ irrigation.

Mountains.—The Rocky mountain range traverses the eastern part of New Mexico, bearing different names at different points. South of Santa Fe it rises to 6,000 or 8,000 feet, while to the north some snow-capped peaks are seen which rise to from 10,000 to 12,000 feet above the sea-level. The Sierra Madre or Anahuac range stretches northward from the Mexican Cordillera through the centre of the territory, and the Wahsatch mountains lie near the western boundary.

Rivers and Lakes.—The principal river of New Mexico is the Rio Grande del Norte. Its head waters are found in the Rocky mountains, and flowing south it enters the gulf of Mexico, forming, in the lower part of its course, the boundary line between Mexico and the United States. Its length is about 2,000 miles, and it is navigable for steamboats, about 700 miles from its mouth. Its principal tributaries are, the Chama, Pecos, Conchos, Salado, Alamo, and San Juan. The Colorado, which empties into the gulf of California, forms part of the western boundary, until it extends into the territory. The Gila, which flows westward, extends along the southern boundary until reaching its source

in the Sierra Madre range; its principal branches are San Francisco and Salt rivers. About 100 miles southeast of Santa Fe, on the high table-land east of the Rio Grande, are several salt lakes, which furnish the country with salt.

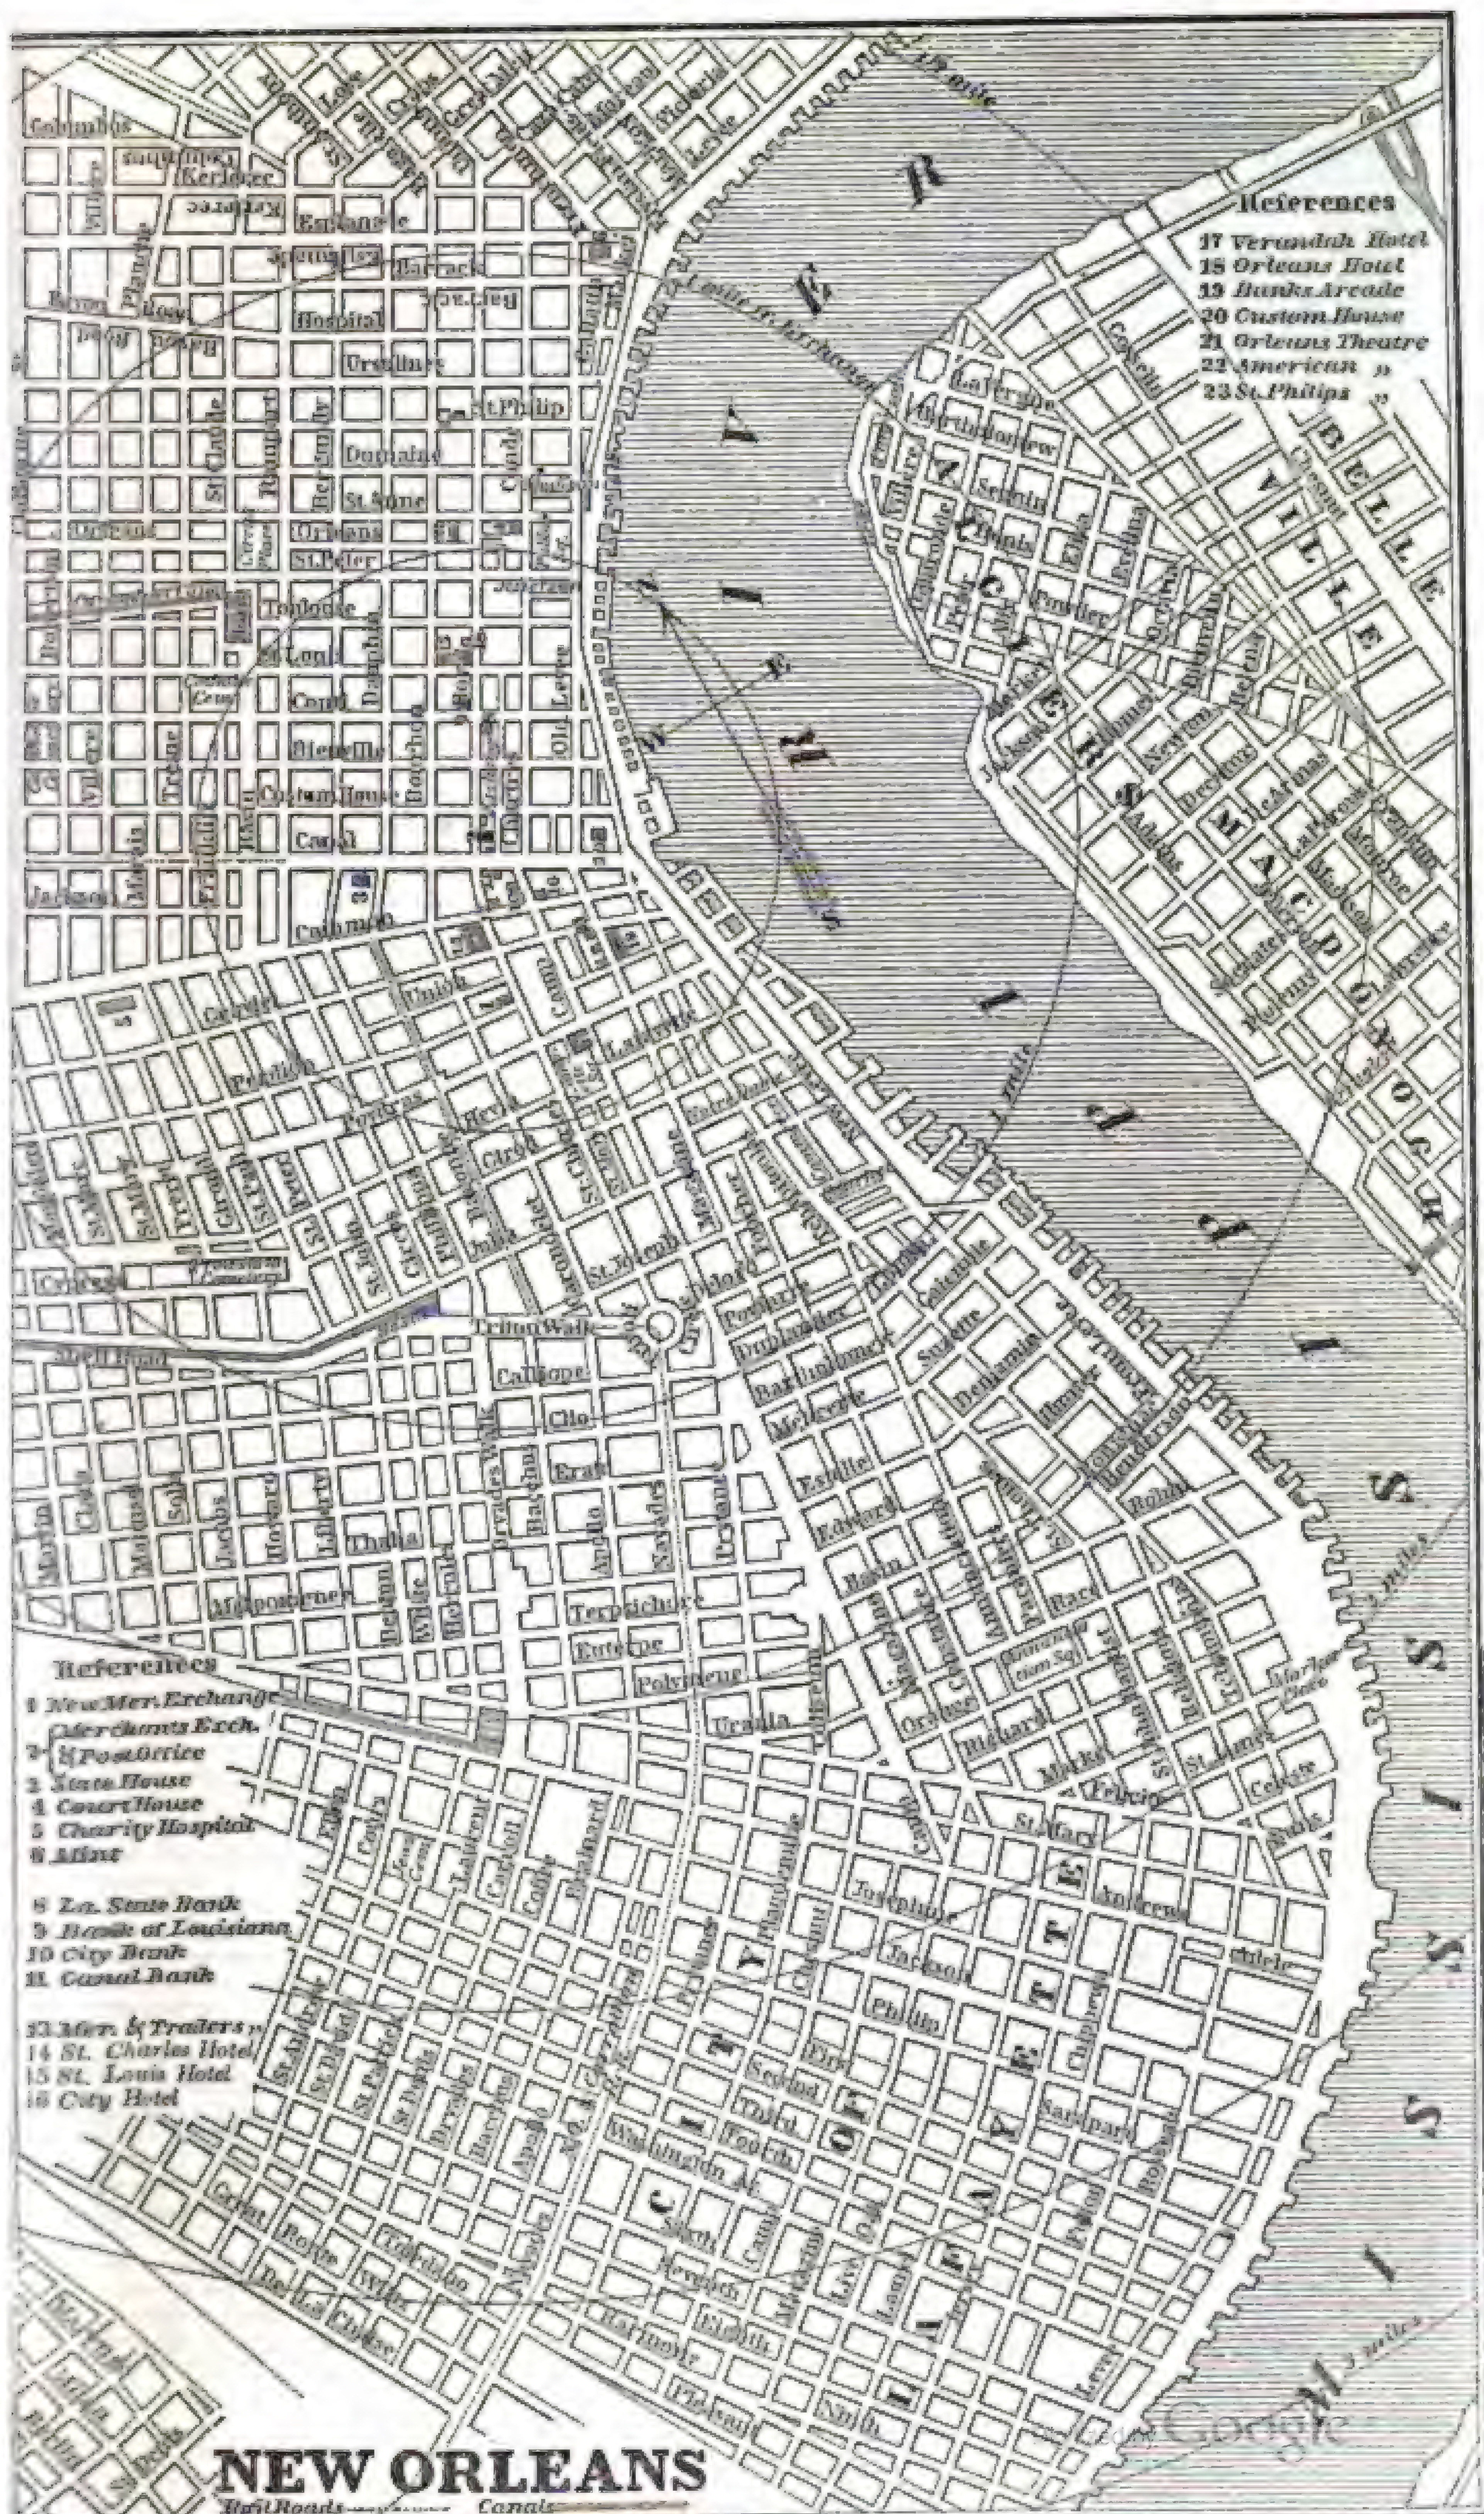

Climate.—The climate is generally temperate, constant, and healthy. Considerable atmospheric differences, however, are experienced in the mountain districts, and in the low valley of the rivers. In the latter the summer heat sometimes rises to 100° Fahrenheit, but the nights are always cool and pleasant. The winters are comparatively of long duration, and frequently severe. The sky is generally clear, and the atmosphere dry, except during the rainy season, from July to October. Disease is little known, except some inflammations and typhoid fevers in the winter season.

Productive Resources.—Indian corn, wheat, beans, onions, and fruits, are raised in large quantities, and the grape-vine is extensively cultivated. The inhabitants pay considerable attention to cattle-raising, and are possessed of large flocks and herds. The country is rich in gold, silver, copper, iron, coal, gypsum, and salt. None but the silver mines, however, have been much wrought. There are considerable domestic manufactures.

Population.—The whole population of New Mexico, according to the census of 1793, was 30,953; in 1833, it was estimated at 52,360, composed of one twentieth Spaniards, one fifth Creoles, one fourth Mestizos of all grades, and one half Pueblo Indians. In 1842, the population was 57,026; and according to the census of 1850, 61,547. This is exclusive of the independent tribes of Indians which still exist in the country.

Government.—The government of New Mexico is similar to that of Utah, and that generally applied to territories of the United States. All citizens of adult ages are voters, and elect a territorial legislature. The governor and judges are appointed by the president of the United States.

History.—The history of New Mexico lies very much in the dark. The Spaniards, it seems, received the first information about it in 1581, from a party of adventurers under Captain Francisco de Leyva Bonillo, who, upon finding the aboriginal inhabitants and the mineral wealth of the country to be similar to those of Mexico, called it New Mexico. In 1594, the then viceroy of Mexico, Count de Monterey, sent the gallant Juan de Oañate, of Zacatecas, to New Mexico, to take formal possession of the country in the name of Spain, and to establish colonies, missions, and presidios (forts). They found a great many Indian tribes and settlements, which they succeeded in Christianizing in the usual Spanish way, with sword in hand, and made them slaves. The villages of the Christianized Indians were called Pueblos, in opposition to the wild and roving tribes that refused such favors. Many towns, of which only ruins exist now, were established at that time; many mines were worked, and the occupation of the country seemed to be secured, when, quite unexpectedly, in 1680, a general insurrection of all the Indian tribes broke out against the Spanish yoke. The Spaniards were either massacred or driven southward, where they founded Paso del Norte. The country was not recovered for ten or twelve years. Several insurrections have since occurred, but none so universal or disastrous as this one. This country followed the fate of Mexico after the revolution that overthrew the Spanish power. The history of New Mexico previous to the invasion by the Americans, has little to arrest attention. It is a continuous record of barbarism and tyranny. On the 8th of September, 1846, Santa Fe was captured by the Americans under General Kearney, and soon after several of the river towns were visited on his route to California. A civil government was now established. On the 19th of January, 1847, an insurrection broke out against the Americans, and in several pueblos many Americans were murdered. Taos, Arroya-Hondo, and Rio Colorado, were the chief scenes of strife. The battles of La Canada and El Embudo also occurred in this month, and in February the battle of Taos; in all of which the Mexicans were completely vanquished. Some few skirmishes occurred after these, but none of importance. From this period the United States authorities exercised exclusive power. On the 2d of February, 1848, a treaty of peace and cession was signed at Guadalupe Hidalgo, by which New Mexico was assigned to the Union. On the 9th of Sep-

NEW ORLEANS, city, seat of justice of Orleans parish, and commercial metropolis of Louisiana, situated on the north bank of Mississippi river, 100 miles from its entrance into the gulf of Mexico, 1,185 miles below the mouth of the Missouri, and 1,172 miles from Washington. Its position and appearance are both singularly different from those of other American cities. The ground, as it recedes from the river, descends by a gentle inclination, causing the houses, when viewed from a point not much above the level of high water, to seem to rise immediately from it. A "levee," or dike, forms a margin between the city and the river, and protects the former from inundation by the latter. It is built of wood, 200 feet wide, and extends for four miles, presenting a most animated scene of commercial prosperity. Within, not only the houses, but the inhabitants, are of many descriptions. Except New York, no city includes Americans from so many different states, while the number of blacks, with the French and Spanish Creoles, and the foreigners, is still greater. These representatives of many nations are drawn to New Orleans by its geographical and commercial relations to the West Indies, South America, Mexico, and the southern parts of North America. The Creole citizens are descendants of the French, Spanish, and Germans, who originally founded and peopled the city, and constitute a large portion of the population. The position of New Orleans, with regard to the interior of the United States, is still more important. Situated near the mouth of the great river of the American continent, the Mississippi, with its immense confluent the Ohio and the Missouri, almost the whole trade of those streams, and of their thousand tributaries, flows toward this point, as to a vast receiving and distributing reservoir. Hence the exports of New Orleans are exceeded by those of no other American city, New York excepted. The great staples of the southern and western states, sugar, cotton, tobacco, wheat, flour, and corn, are the articles chiefly shipped from this port. The harbor is, excellent, deep, and spacious. Ships, and vessels of every description, from the flatboat of the Mississippi to the magnificent ocean-steamer, here congregate, or enliven the scene, as they move from point to point. From the city to the bar, near the gulf, 100 miles below, the river has an average depth of 100 feet, affording anchorage for several miles along the wharves. The bed of the river, and its banks toward the mouth, are gradually rising. In 1722 there were 25 feet of water on the bar. In 1767 there were but 20, and now there are but 9 feet. The present mouth of the river is three miles beyond the mouth of 1724.

The city is gradually extending toward Lake Pontchartrain on the north, which communicates with the Mississippi by a canal, the Bayou St. John, and a railroad six miles long, and with the gulf of Mexico by Lake Borgne and intermediate passages. The Mexican Gulf railroad communicates with Proctorville, 27 miles

distant. From the nature of the commercial advantages which New Orleans possesses, it is apparent that its prosperity is almost unlimited, and is the necessary result of the settlement of the vast region of the valley of the Mississippi. It is now the sixth city in population, and the third in commerce in the Union, and perhaps would already have held a higher rank, but from the check it receives from the prevalence of yellow fever, and other maladies, consequent upon its situation. There were formerly three municipalities and the city of Lafayette, with distinct councils for the management of internal affairs, in the geographical limits of the city; these were consolidated in 1852, under one municipal government. This city was also the capital of Louisiana until 1849, when the seat of government was removed to Baton Rouge. It contains churches of various ages and styles of architecture; hospitals, charitable institutions, theatres, banks, warehouses, hotels, and the United States branch mint, a large building, 108 feet deep, 282 feet long, and three stories high; also the University of Louisiana, and many excellent schools. The city is supplied with water, elevated by steam from the Mississippi into a reservoir, and thence distributed through iron pipes.

The population in 1763, was 3,190; in 1785, 4,980; in 1810, 17,242; in 1820, 27,176; in 1830, 46,310; in 1840, 102,193; in 1850, 115,625.

NEWPORT, p. t., seat of justice of Newport co., and capital, together with Providence, of Rhode Island, situated on the southwest side of the Isle of Rhode Island, at the main entrance to Narraganset bay, 30 miles south of Providence. It occupies a gentle eminence fronting the harbor, from which it presents a fine appearance. Its pleasant scenery, embracing many spacious views of the ocean and its rocky shores, its healthful climate, abundance and variety of fish in its waters, and its interesting historic associations and relics of early times, render Newport one of the most attractive places of summer resort in the country. Not far from the town stands a curious monument of antiquity—the Old Tower. Its age and origin are unknown, and have been the subject of much learned but fruitless disquisition.

Newport harbor is one of the most accessible, safe, and capacious in America. Long before the Revolution, it gave to the town a rapid growth and prosperity, which, at one time, seemed likely to outstrip that of New York. Here, at different periods, anchored the

British fleet, and occupied the town as well as the surrounding country. Here, also, the French fleets entered, under Count D'Estaing and Admiral de Ternay. From these naval operations Newport suffered greatly, but soon recovered its former vigor, and continued to be one of the chief commercial ports in the Union, until the manufacturing success of Providence diverted the tide of enterprise into other channels. Manufactures and commerce are still extensively prosecuted.

The population in 1810, was 7,907; in 1820, 7,319; in 1830, 8,010; in 1840, 8,333; in 1850, 9,563.

NEW YORK, one of the United States, the wealthiest and the most populous in the Union, is situated between 40° 30' and 45° N. latitude, and 71° 56' and 79° 56' W. longitude from Greenwich, and is bounded N. by Canada, which is separated in part by Lake Ontario and the river St. Lawrence; E. by Vermont, Massachusetts, and Connecticut;

S. by the Atlantic, New Jersey, and Pennsylvania; and W. by Pennsylvania, Lake Erie, and the Niagara river; the two latter separating it, in part from Canada West. It has a superficial area of about 46,000 square miles, or 30,000,000 acres.

Physical Aspect.—The natural features of this state are greatly diversified, but in general may be regarded as an elevated tract, with numerous indentations and depressions, which form the basins of the lakes and the valleys of fertilizing streams. The surface of the eastern division is more varied in its character than the western. There are some level tracts, the principal of which embrace the prairies and larger plains of Long Island; but the greater portion is mountainous and

hilly. The central and western divisions are mostly level, or moderately undulating, except near the Pennsylvania line, where it becomes broken and hilly. The soil of this state is generally good, except on the more sterile parts of the Hudson highlands, and other mountainous tracts, and many parts are celebrated for their extraordinary fertility. The valleys of the Mohawk and the Genesee, in particular, have long been proverbial for their productiveness, and are regarded as inexhaustible in their yield. The extensive plains in the central part of Long island, heretofore used as woodlands, producing large quantities of fuel for the New York market, are now being converted into farms and gardens, and the soil, with a moderate outlay for amendments, is found to produce, when properly cultivated, as well as any other land on the island.

Mountains.—There are several ridges of mountains in this state, which are generally considered as extensions of the Alleghany or Appalachian chain. Two of these cross the eastern division, one of which extends from New Jersey to West Point, forming the Hudson highlands; thence in a northerly direction to the Tugbannic mountains, constituting the dividing ridge between the Housatonic and Hudson rivers. The same range continues to Vermont, and is there known as the Green mountains. The other range, from New Jersey, terminates at the Shawangunk mountains, on the west side of the Hudson. Another range still more prominent, also extends from New Jersey, as a continuation of the Kittatinny ridge, to the Kaatsbergs (Catskill), near the Hudson, whence it continues in a north-westerly direction, through the counties of Albany and Schoharie, forming the Helderberg; thence to the Little Falls, through Herkimer, where it is known by the name of Sacondaga mountain; thence along to the westward of Lake Champlain to the river St. Lawrence, forming the Adirondack mountains, Mount Marcy being the most lofty pinnacle of the range.

Rivers, Creeks, Lakes, and Bays.—The principal rivers are, the St. Lawrence, Niagara, Hudson, Delaware, Susquehanna, Genesee, Oswego, Oswegatchie, Black, St. Regis, Mohawk, Saranac, Salmon, Chenango, Tioga, Seneca, Canisteo, Alleghany, Croton, Harlem, and East. The most noted creeks are, the Tonawanda, Ellicott, Eighteen-Mile, Oak-Orchard, Oriskany, East and West Canada, Schoharie, Sacondaga, Rondout, and the Wall Kill. Lakes Erie, Ontario, and Champlain, lie partly in this state. The other chief lakes are George, Cayuga, Seneca, Oneida, Oswegatchie, Canandaigua, Chautauque, Skaneateles, and Crooked. The principal bays are, New York, Jamaica, Great South, Shinnecock, Gardiner's, Peconic, Oyster, and Flushing.

Cataracts.—New York is noted for a number of magnificent waterfalls. The falls of Niagara form the most stupendous cataract in the world. The water accumulated from the great upper lakes, forming a river about three quarters of a mile wide, and from forty to sixty feet deep, flows with a current of seven miles an hour. As it proceeds the river widens, and embosoms Grand and Navy islands, and again contracts to its former width. Below the islands are rapids, which extend a mile, to the precipice, in which space the river descends fifty-seven feet. Here Goat island divides the river into two channels. Over the precipice the river falls perpendicularly about 160 feet. Much the greater part of the water passes in the channel between Goat island and the Canada shore, and this fall is called, from its shape, the Horseshoe. Between Goat island and the small island in the eastern channel the stream is only eight or ten yards wide, forming a beautiful cascade. Between this small island and the American shore the sheet of water is broad, and the descent greater by a few feet than at the Horseshoe fall, but the stream is comparatively shallow. The best single view of the falls is from Table-Rock, on the Canada shore, and the best view of the rapids is from Goat island. Trenton falls, twelve miles north of Utica, are a succession of magnificent cascades. The Cohoes falls are formed by the passage of the Mohawk over a wall of rock, in one sheet, sixty-two feet high. At Rochester, the Genesee has a fall of ninety-six feet. At Ithaca, Fall creek has a descent of 438 feet in the space of a mile. The Cauterkill falls are a beautiful cascade, of great elevation, in the Highlands.

Mineral Springs.—The Saratoga and Ballston mineral springs are the resort of invalids at all seasons, and of the fashionable world during summer. The salt springs, near Syracuse, annually yield four million

bushels of salt. The sulphur Springs, at Sharon, in Schoharie county, and at Avon, in Livingston county, are efficacious in the treatment of chronic complaints.

Islands.—The chief islands, surrounded by tide water, are Long, Staten, Manhattan, Blackwell's, Gardiner's, Shelter, and Plum. Those of the inland waters are, Grand and Tonawanda islands, in the Niagara river, and several others in the St. Lawrence.

Climate.—The climate is more varied, perhaps, than in any other state. In the easterly section, below the Hudson highlands, the winters, are comparatively mild, but changeable, and frequently are rendered disagreeable by the ocean winds. In the northeastern and central divisions they are more uniform, but severe. In the western division they are also mild, and are subject to less variation than either of the other divisions, except near the lakes, where they are often rendered unpleasant by tempestuous winds. The extremes of temperature near the city of New York vary from 4° below zero Fahrenheit to 90° above; at Albany, from 16° below to 93° above; at Canandaigua, from 8° below to 87° above; and at Buffalo, from zero to 80° above. The climate of the state is generally regarded as healthy, with the exception of a few months in summer and autumn, in the vicinity of stagnant marshes and sluggish streams. Here, as in most other parts of the country, situated in similar circumstances, intermittents and bilious disorders more or less prevail.

Productive Resources.—The chief products are horses, mules, neat cattle, sheep, swine, poultry, eggs, beef, pork, fish, butter, cheese, silk, hay, wool, sugar, wine, hops, tobacco, flax, hemp, lumber, pot and pearl ashes, pitch, tar, turpentine, wheat, flour, rye, barley, oats, peas, beans, flax-seed, buckwheat, potatoes, Indian corn, apples, cider, pears, plums, peaches, grapes, and other fruits peculiar to the latitude. Of the mineral and fossil resources, iron, salt, marble, hydraulic cement, gypsum, super-phosphate of lime, flagstone and lime, are the most important, all of which are extensively and profitably wrought.

Manufactures.—The manufactures of New York are extensive. Every section of the state abounds in excellent water-power, which is generally improved for manufactories, flour-mills, saw-mills, &c. Cotton, woollens, iron, paper, leather, glass, oil, silk, cutlery, hardware, firearms, carriages, &c., are the more important articles of manufacture.

Railroads and Canals.—New York has about 2,000 miles of railroads in successful operation. The most important are, the New York and Erie, extending from the Hudson river to Lake Erie, a distance of 450 miles; and the Hudson river, and the New York, Harlem, and Albany railroads, extending from New York city to Albany. From Albany railroads extend eastward to Boston, northward to Canada, and westward to Buffalo. From all these roads branches extend to various important points in the state. The New Haven connects New York city with the eastern states. The principal canal in New York is the Erie, extending from Albany to Buffalo, 364 miles. From the Erie lateral canals diverge north and south, traversing many important sections of country. The canals are, with a single exception, the property of the state. They have an aggregate length of about 1,000 miles, and have been principally built for the purpose of uniting the navigation of the lakes with the Hudson river.

Commerce.—The foreign commerce of New York is nearly equal to that of all the rest of the Union combined. Her lake and interior commerce is equally immense. In 1850, its imports and exports amounted to \$163,836,313. The shipping owned within the state is over one million of tons, of which about one half is employed in the coasting trade and on the lakes.

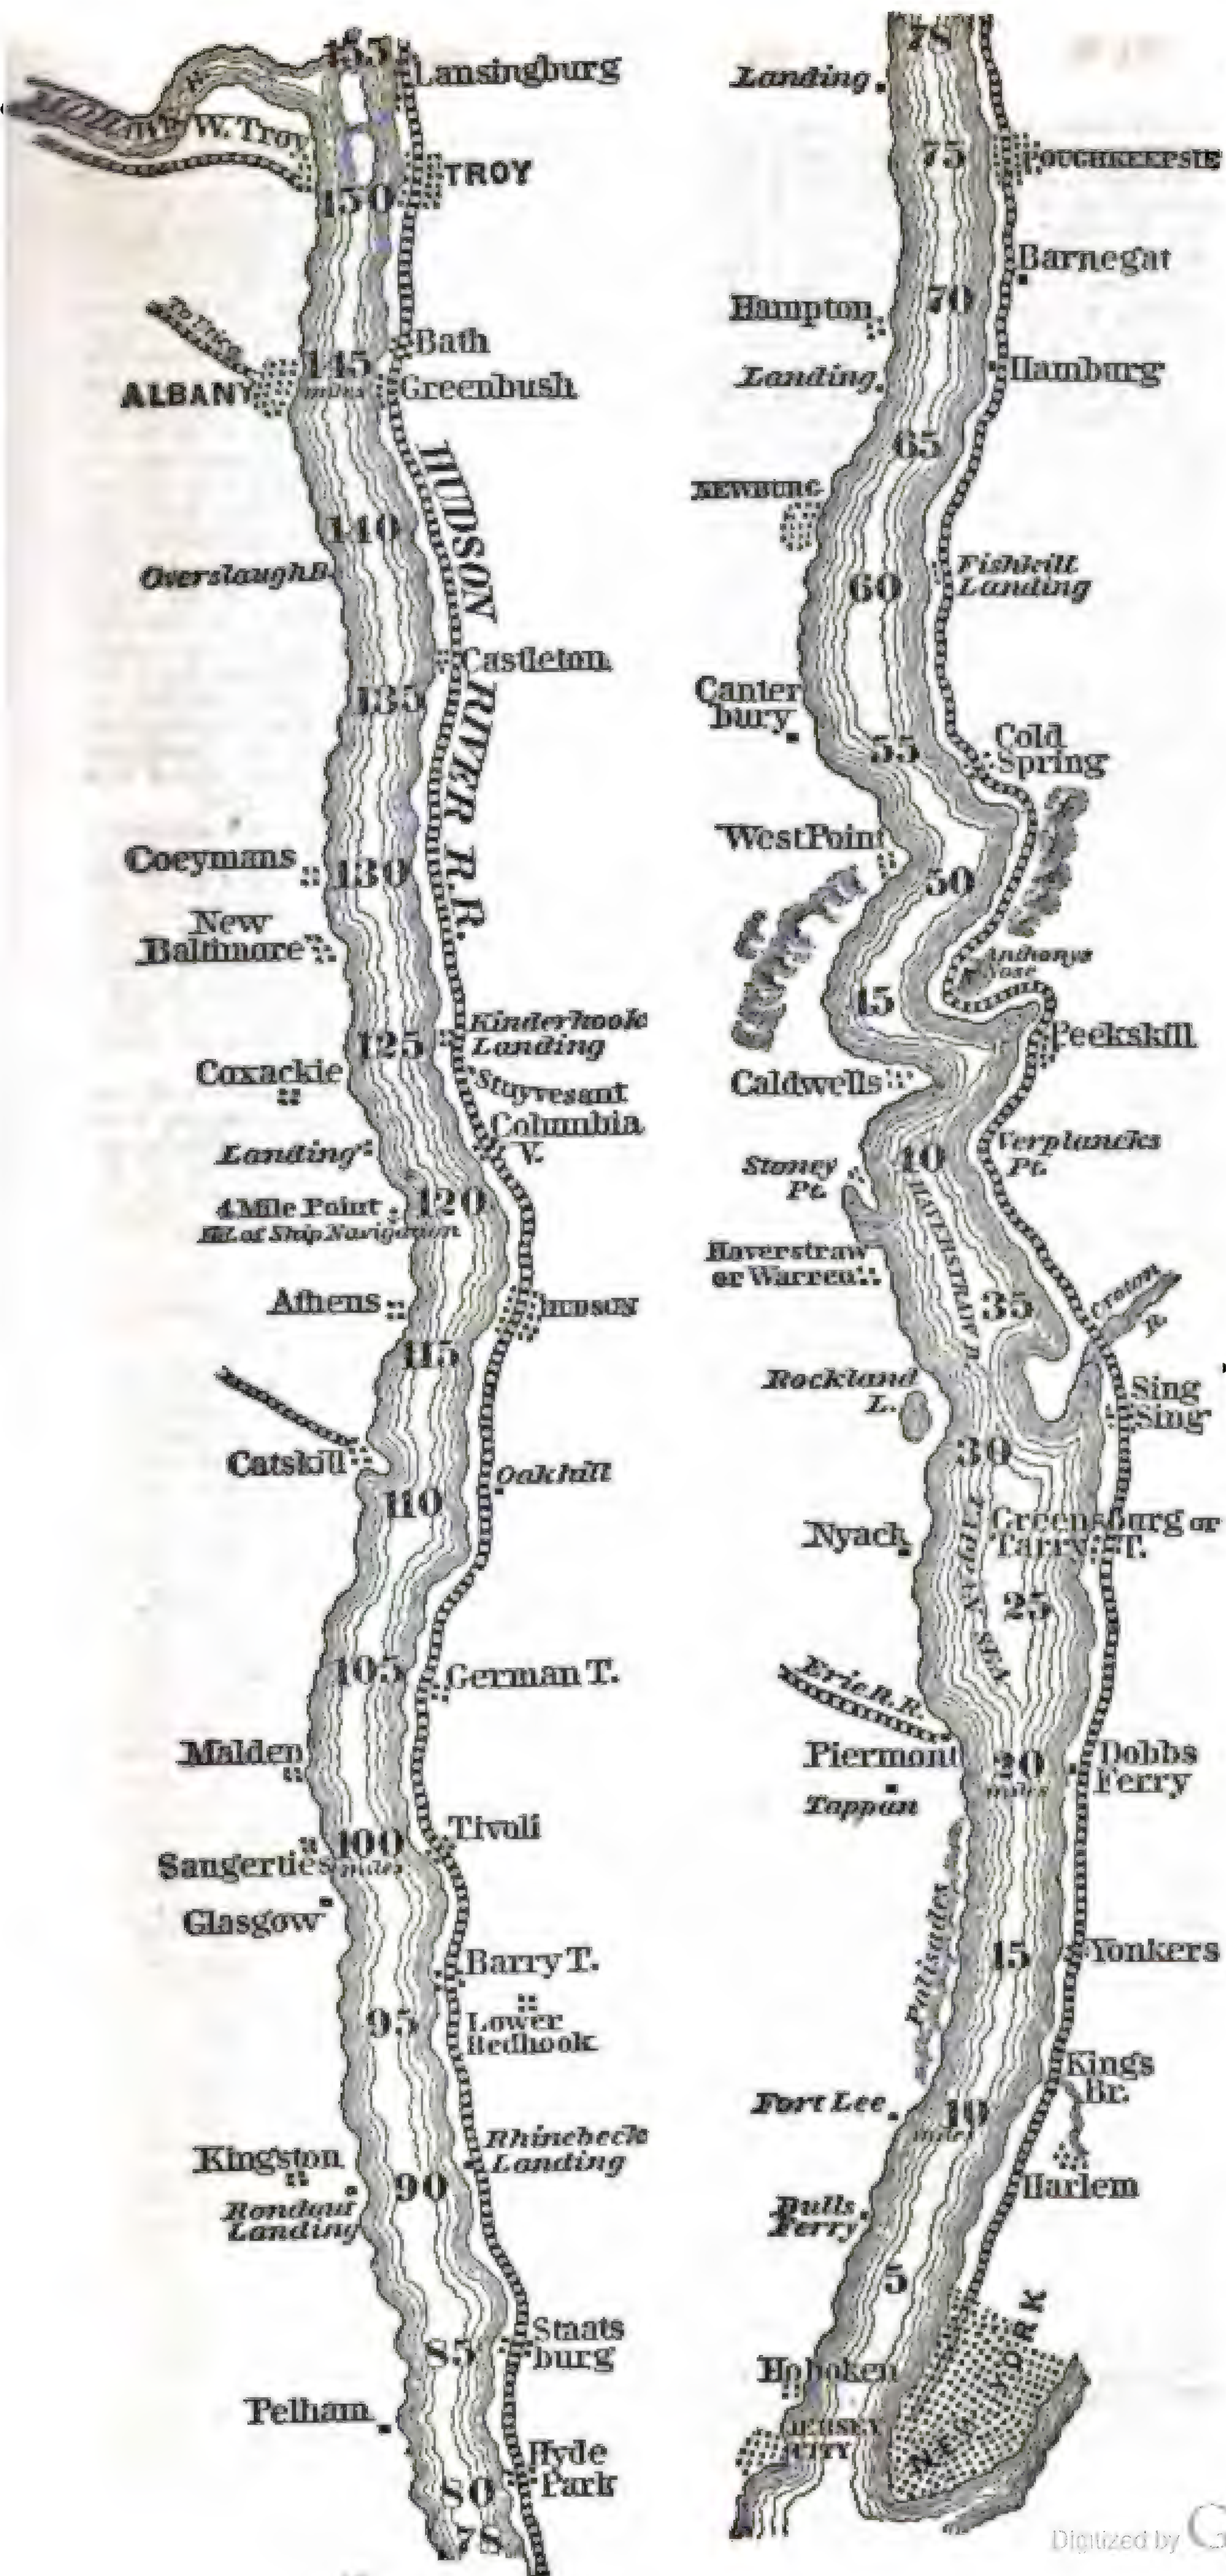

Education.—Among the literary institutions of New York are, Columbia, Union, Hamilton, and Geneva colleges; and the New York, Madison, and Rochester universities. There are seven theological seminaries, and five medical schools. There are, also, about 250 academies, and 12,000 common schools in the state. The money appropriated for the support of common schools amounts to over a million of dollars annually.

Population.—In 1790, 340,120; in 1800, 586,756; in 1810, 959,949; in 1820, 1,372,812; in 1830, 1,918,608; in 1840, 2,428,957; in 1850, 3,097,394. Number of slaves in 1790, 21,324; in 1800, 20,343; in 1810, 15,017; in 1820, 10,084; in 1830, 75; in 1840, 4.

Government.—The executive power is vested in a governor, and lieutenant-governor, who must be native-

MAP OF HUDSON RIVER and Hudson River Railroad.

The Hudson river proper rises by two branches, in the mountainous regions of Hamilton and Essex counties, New York. The Eastern branch is composed of two streams, which unite in Warren county. Fifteen miles below this, the Sacandaga unites with the Hudson at Jessup's falls; eighteen miles below this, it passes Hadley's falls; and twenty miles further is Glen's falls. The only considerable tributary below this, is the Mohawk, ten miles above Albany. Its whole course, from its source to its entrance into New York bay, is 320 miles. The tide flows as far as Albany. The city of New York owes much of its prosperity to this river, connected as it is with the Erie and Champlain canals. The Hudson River railroad, which connects Albany with New York, together with the river travel, are greater thoroughfares than any other highway on this continent.

born citizens of the United States, and have resided in the state five years, and who are elected biennially; and the legislative power in a senate, of 32 members, elected biennially, and a house of assembly, of 128 members, elected annually, on the Tuesday succeeding the first Monday in November. The secretary of state, comptroller, treasurer, canal commissioners, attorney-general, engineer, and surveyor, are elected biennially by the people. Judges are elected by the people, and hold their office eight years. Every white male citizen, 21 years of age, who has resided in the state one year, and in the county where he offers his vote four months next preceding the election, enjoys the right of suffrage. Persons of color who have resided three years in the state, and have possessed a freehold of \$250, one year previous to the election, are allowed the right of suffrage.

History.—In the year 1609, Henry Hudson, a navigator (who had previously made two voyages to the American continent, in the service of a company of London merchants), in the employ of the Dutch East India Company, while exploring the coasts of what are now Virginia, Delaware, and New Jersey, in search of a passage to the Pacific ocean, passed through the Narrows, entered the magnificent bay of New York, and discovered the mouth of the Manhattan (now Hudson) river. For ten days he continued his voyage cautiously up this river, confidently hoping it would open through to the great ocean, and it was not until he reached the head of tide-water, in fact until he was at the mouth of the Mohawk, that he relinquished this idea. He reached England in the autumn of that year. During the same year, Champlain, having fortified Quebec, passed through the lake which bears his name, and descended Lake George. The two navigators came very near meeting each other from different points, in the interior of New York. The Dutch commenced a regular trade with the Indians upon the Hudson in 1610, which was continued several years before a permanent settlement was commenced. They began a settlement at Albany in 1615, built a fort, and called the country upon the river *New Netherlands*. About the same time, a small settlement was made upon Manhattan island, but actual colonization did not take place until after 1621, when the Dutch West India Company was formed. In 1629, this company issued patroon privileges, for the purpose of encouraging settlements, and emigration rapidly increased. In 1633, the Dutch erected a fort on the Connecticut river, upon the present site of Hartford, but soon after abandoned the place. The Dutch at this time claimed Long Island, yet the English commenced settlements upon the eastern end of it. They also claimed jurisdiction over the whole country bordering the Delaware and its bay, but there a colony of Swedes, which had been projected by and planted under the auspices of Gustavus Adolphus, disputed their authority, and they built a fort upon the island of Tinicum, in the Delaware, a few miles below Philadelphia. In 1643-'44, the Dutch waged a war against the neighboring Indian tribes upon Long Island, and in New Jersey, who showed signs of disaffection, having been badly treated by the whites. The Indians were subdued and dispersed. In 1647, Peter Stuyvesant, the most celebrated of the Dutch governors, arrived, and by order of the home government, he set about reducing the Swedish colony to submission. This was accomplished in 1655, and *New Sweden* upon the Delaware became a part of the *New Netherlands*. In 1664, Charles II. granted the country between the Connecticut and the Delaware to his brother, the Duke of York, who sent an armed force to take possession. This they accomplished in the autumn of that year, and the name of the settlement and province was changed to New York. When, in 1689, Governor Andros was imprisoned, the people of New York, under Leisler, took possession of the fort there. Leisler continued at the head of affairs until 1691, when he was arrested by Slaughter, a newly-appointed royal governor, and executed on a charge of high treason. From the year 1700 until 1744, the province of New York was quiet, except the excitement produced by a pretended negro plot. It was then that the "five years' war" with France took place, and northern New York became the theatre of hostilities. Hoosick and Schenectady were burnt. From 1755 to 1763 occurred the French and Indian wars, and New York was the chief field of operations within the English colonies. Fort Oswego was captured by Montcalm, August 13, 1756, and the next year, on August

9, he stormed and took Fort William Henry, on Lake George. The English also made conquests of fortresses in the possession of the French; Ticonderoga, Frontenac, and Niagara. The congress of the colonies, which the stamp-act gave birth to, was held in the city of New York, in 1765, and about the same time the association called the Sons of Liberty was organized in this province. In 1767, the powers of the colonial legislature were annulled by parliament, because the assembly refused to grant supplies to troops. In 1773, the people of New York, like those of Boston, successfully resisted the landing of tea. In 1775, after hearing of the battle of Lexington, a provincial congress was assembled, and thus the colony was governed until 1777, when a constitution was adopted. On August, 27, 1776, occurred the battle on Long Island, between the Americans and British and Hessians. The city was evacuated by the Americans on the 23d of September. From that time until the close of the Revolution, this state was the scene of some of the most exciting and important events of the war. But our limits forbid a detail of them. On the 25th of November, 1783, the British evacuated New York. It was there that Washington, the first president of the United States, was inaugurated, on the 30th of April, 1789. New York ratified the Constitution of the United States July 26, 1788.

NEW YORK COUNTY, is situated at the southeast part of the state, between Hudson and East rivers, and includes Manhattan, Blackwell's, Ward's, and Randall's islands. Area, 20 square miles. Face of the country, undulating; soil, fertile. Seat of justice, New York city. Pop. in 1653, 1,120; in 1661, 1,743; in 1673, 2,580; in 1696, 4,455; in 1730, 8,256; in 1756, 10,530; in 1774, 22,861; in 1786, 23,688; in 1790, 33,131; in 1800, 60,489; in 1810, 96,373; in 1820, 123,706; in 1830, 202,589; in 1840, 312,710; in 1850, 515,507.

New York, city, the great commercial metropolis of the United States, and in population, commerce, and wealth, one of the first cities of the globe, is situated in latitude 40° 42' 40" north, and in longitude 74° 1' 8" west from Greenwich, and 3° 0' 22" east from Washington, 216 miles southwest of Boston, and 86 miles northeast of Philadelphia.

The city is located on Manhattan island, between Hudson and East rivers, which unite at its southern extremity, forming one of the most admirable harbors for beauty and convenience in the world. The island is 13½ miles long, bounded on the north by Harlem river, formerly Spuytendevil creek, and embraces an area of about 20 square miles. On the south part of this, the compact part of the city is built, extending northward about four miles from river to river, and spreading by a rate of progress which will soon cover the whole island. Its admirable position for foreign commerce, with its noble bay, and its remarkable facilities of internal communication with every portion of the Union, have been the unfailing sources of its extraordinary growth and prosperity. Here the noble Hudson, after a course of more than 200 miles, through a rich and populous region, sweeps majestically along, bearing on its bosom the vast commerce of the Erie canal and the west, expands into the upper bay, and passes through the "Narrows" into the ocean. Here, too, on the opposite side, courses the strong tide of East river, which, winding between Long Island and the main land, forms the rocky pass of "Hell-Gate," and several islands. This stream, which averages about three fourths of a mile in width, and thirty feet in depth, affords a passage for vessels of a large class into Long Island sound and the Atlantic; while those engaged in foreign commerce, as well as in the southern coasting-trade, usually enter and leave the harbor through the Narrows, between Staten and Long islands. The best anchorage for these is at the wharves along the East river, which is more secure from ice than the Hudson. British packets, coasting vessels, and canal-boats generally, lie along the former river; some at Brooklyn, and the Atlantic dock, on the opposite bank; while the Hudson is thickly lined with steamboats and ships from England, France, Spain, Portugal, Holland, Sweden, and other foreign countries. On this river, also, at the foot of Canal street, is the wharf of the Collins' line of steamers, between Liverpool and New York. The Cunard steamers land at Jersey city, on the opposite side of the river. Other splendid lines run between the city and Southampton, Bremen, and Havre, in Europe, Charleston, Savannah, New Orleans, Havana, Chagres, Nicaragua, and Panama. Steamboat of dif-

BIRD'S-EYE VIEW OF NEW YORK,
SHOWING THE CITIES OF NEW YORK, BROOKLYN, AND WILLIAMSBURG, WITH THE HARBOR AND RIVERS.

ferent grades, from the magnificent floating palaces of the Hudson, to the lesser propeller and steam-ferry boats, are constantly leaving or approaching the city, and animate its waters with the most varied prospect of life and activity. For pleasant, salubrious position, and beauty of surrounding country, New York is as conspicuous as it is for commercial advantage. Entering the outer bay, from the Atlantic, the traveller sees on the left of the broad expanse of water, the blue hills of New Jersey, formerly known as the highlands of Navesink. Toward the north, the romantic heights of Staten island rise to view, and on the east, the shores of Long island. Following the Narrows, between the two islands, which are defended by strong fortifications, the upper or inner part of the bay opens an enchanting scene. Staten island recedes, and the shores of New Jersey reappear. Long island continues on the right, and after passing Governor's island, with its fortifications, the great city displays its forest of masts and spires, its domes, and its houses, relieved by the green foliage of the "Battery," set, like an emerald, in some darker stone. The ground rises from the Battery, and from both rivers, by a gradual ascent, of which Broadway is the ridge, or summit. This surface, with the outline of the city, which rapidly widens from its southern point to a breadth of two miles, at Corlear's Hook, on the East river, gives an imposing effect, unequalled by almost any in the world. At the lower and ancient part of the city, the streets are somewhat irregular, but not unpleasant, being lined with rows of warehouses and stores of the most splendid and solid construction. Many of these are brick, some of freestone, and others of white marble. This is the business part of the city, and embraces comparatively few residences. Wall street is the principal theatre of financial and mercantile operations, and is a broad, straight avenue, leading from East river to Broadway. On either side of this are numerous splendid banking-houses, and other public buildings, among which is the Merchants' Exchange, of blue granite, or sienite, 200 feet long, 171 feet wide, and 124 feet high to the top of the dome, with a portico supported by massive solid pillars. Within, the most remarkable apartment is the exchange, a rotunda, 80 feet in diameter, and 80 feet high, lighted from above by the dome, and resting upon eight Corinthian columns of Italian marble. The whole building is of fire-proof materials, and is a splendid ornament to the city. The customhouse, on the same street, is a beautiful structure of white marble, in Doric architecture, surrounded by rows of Corinthian columns, with a portico extending across the entire front on Wall street. It is 200 feet long, 90 feet wide, and 80 feet high, and contains numerous apartments for the different offices, the principal of which is of circular form, 80 feet in diameter, surrounded by columns, and lighted by a beautiful dome. This structure occupies the site of where once stood Federal Hall, where Washington was inaugurated first president of the United States, April 30, 1789. At the head of Wall street, fronting on Broadway, stands Trinity church, the most costly and magnificent structure of the kind in America. It is of light-brown freestone, in purely Gothic architecture, and is 193 feet deep, 84 feet wide, the walls 60 feet high, and the spire reaching 284 feet above the ground. From the battlements, at the base of the spire, appears a magnificent panorama of New York bay, its islands, New Jersey, and Long island, with Brooklyn, Williamsburgh, and other populous towns; while below the feet the giant city spreads east, west, north, and south, on each side of Broadway, which for three miles bisects it in nearly a straight direction. This splendid street, which is 80 feet wide, is lined with large and magnificent stores, warehouses, and hotels, built of white marble, freestone, and other durable materials. Below Trinity church, besides a number of fine hotels, there is the United States bonded warehouse. Proceeding northward, successively appear the American Museum, the Astor house, occupying an entire square, built of blue granite, the city-hall, the Irving house, opposite to which is Stuart's dry-goods palace, a massive structure of white marble, the Society library, City hospital, American institute, St. Nicholas hotel, Academy of Design, Metropolitan hotel, and Grace church, of pure white marble, elaborately sculptured. At Tenth street, Broadway makes a small angle, and, after passing Union and Madison squares, proceeds nearly northward to the upper end of the island. Among the public buildings in the lower part of the city

is the city-hall, in the "Park," a pleasant triangular enclosure, of ten acres. This edifice is of white marble, except the back, which is of brown freestone. Its architecture is a combination of the Ionic, Corinthian, and Composite orders. It is 216 feet long, 105 feet deep, and 65 feet high. Upon the roof is a cupola, with a clock, illuminated at night, and an enormous bell, the powerful tones of which send the alarm of fire over an area of many miles. Within are well-furnished apartments for different offices of the city government; and in the second story the governor's room, which is decorated with portraits of the presidents, governors of the state, mayors of the city, and many American heroes and statesmen. In front of this edifice a splendid fountain rises, from the middle of a circular basin, surrounded by flowers and shrubs. The park also contains the new city-hall, the hall of records, and several other public buildings, for the accommodation of the courts, and city business. The hall of justice, often called, from its architecture, the "Egyptian Tomb," is a massive and large building, on Centre street, of light-colored granite, 253 feet long, and 800 feet wide. It contains the city prison, and other departments of justice. Columbia college is pleasantly situated westward of the park, fronting a beautiful green, the west side of which once overlooked the Hudson, but it is now at a distance of about a fourth of a mile. This institution was founded under George II., in 1754, and has educated some of the most distinguished men of the country. The New York postoffice occupies the old Middle Dutch church on Nassau, Cedar, and Liberty streets. Other prominent buildings worthy of note are Clinton hall, occupied by the Mercantile library; Odd-Fellows hall, an imposing structure of freestone; the New York university, an elegant white marble Gothic structure; the university medical college, on Fourteenth street; the New York college of physicians and surgeons, on Crosby street; the New York medical college; the general theological seminary of the protestant episcopal church; the Union theological seminary; the free academy; the Astor library; the institution for the blind; the deaf and dumb asylum; the New York orphan asylum, upon an attractive slope overlooking the Hudson; the colored orphan asylum for friendless boys; the sailors' home; the colored home, and many other noble, charitable institutions, which form a most enviable ornament of pride and honor for the metropolis of America.

New York is well furnished with educational and literary privileges, and manifests its high interest in mental culture, by the number and excellence of its libraries, schools, colleges, lectures, and journals, the latter of which are, in general, superior to those of any other city in the Union, for intrinsic merits, despatch, and for every requisite of newspaper literature.

The public grounds of New York are numerous, but scarcely commensurate with its greatness and wealth. The "Battery," at the south extremity, is an airy and delightful resort in summer, carpeted with greensward, shaded with large trees, and fanned by the breezes of the bay. At the southwest side, built up from the water, is Castle-Garden, once a fortification, but now used for public gatherings, and for the magnificent annual fairs of the American Institute. Its vast amphitheatre will contain 10,000 persons. Not far from the battery, at the foot of Broadway, is the "Bowling-Green," a small elliptical enclosure, containing a fountain and lofty trees. Here, before the Revolution, stood a gilded leaden statue of George III., which was converted by the patriots into bullets, to be fired at the troops of the king, whom it represented. The park has been already noticed. Union square is a pleasant oval ground, adorned with flowers, grass, trees, and a fountain. Washington square, formerly a potter's field, lies westward of Broadway, and affords a pleasant promenade. Tompkins, Stuyvesant, and Madison squares, are the other public grounds, none of which are sufficiently ample for the wants of the city. St. John's, and Grammercy, are beautiful private parks.

It remains to notice a work which, in grandeur of design, and magnificent execution, is truly worthy of the commercial metropolis of America: the Croton water-works, the most extensive and costly structure of the kind in the country, and probably in the world, if we except those at Marseilles, in France. A dam across Croton river, 40 miles north of the city-hall, creates an exhaustless and beautiful lake, of about 400 acres in area, five miles in circumference, and capable of containing

550,000,000 gallons of water. The aqueduct extends from this point to Harlem river, without interruption, conveying the water through a conduit of masonry, which has a descent of about one foot to a mile, is six feet three inches wide at the bottom, seven feet eight inches at the top, and eight feet five inches high. It passes Harlem river upon the "High Bridge," which has been pronounced equal to the most magnificent structures, of a similar kind in ancient Rome. Fourteen piers of solid masonry support arches, upon which rests the bridge, 1,450 feet long, and 114 feet above tide-water. After crossing the river, the aqueduct conveys the water to the receiving reservoir, 836 feet wide, 1,825 feet long, and containing 150,000,000 gallons. The water is separated by a partition of masonry, forming two divisions, which may be alternately full and empty, or both full at the same time. The whole area of the surface of the water is equal to 35 acres. From this basin the water is conveyed through iron pipes to the distributing reservoir, two miles southward, whence it is distributed through iron pipes under ground, enters the houses, and cleanses the streets, administering comfort, beauty, and health, to the city and its denizens. The area of the latter reservoir is equal to four acres; its capacity is 20,000,000 gallons. The water-works can supply 60,000,000 gallons daily; the average quantity is 30,000,000. The cost of the aqueduct and reservoirs was over \$12,000,000.

The manufactures of New York, like its commerce, are more extensive than those of any other American city. Ship-building and machinery, are among the branches most largely carried on. Here are built the magnificent ocean steamers, packets, and steamboats, that are the glory of New York.

The principal streets are traversed in various directions by omnibus lines, connecting the important points. Ferries communicate with Hoboken, Jersey city, Staten Island, Brooklyn, Williamsburgh, and Astoria.

The railroads diverging from New York are, the Harlem; Hudson River, to Albany; the New York and New Haven; the Camden and Amboy; the Philadelphia; the New Jersey Central; the Morris and Essex; the Paterson and Ramapo; the Erie; and the Long Island. Not all of these enter the city; many communicate by steamboats from different distances.

The population in 1653, was 1,120; in 1661, 1,743; in 1675, 2,580; in 1696, 4,455; in 1730, 8,256; in 1756, 10,530; in 1774, 22,861; in 1786, 23,688; in 1790, 33,131; in 1800, 60,489; in 1810, 96,373; in 1820, 123,706; in 1825, 166,136; in 1830, 302,589; in 1835, 270,089; in 1840, 312,710; in 1845, 371,280; in 1850, 515,507.

NORFOLK, city, seat of justice of Norfolk co., Va. Situated on Elizabeth river, opposite Portsmouth, 32 miles from its entrance through Hampton Roads into the ocean, 106 miles southeast of Richmond, and 230 miles from Washington. This town is more remarkable for its deep and spacious harbor, than for its appearance. The ground is low and marshy, the Great Dismal swamp covering a large portion of Norfolk county. The streets are generally irregular, and the houses not splendid, though some of the principal avenues are wide, straight, and neat. Hampton Roads are the basin formed by James and Elizabeth rivers before passing into the Atlantic. The entrance to these from the ocean, is defended by strong fortifications. At Gosport, near Portsmouth, on the west side of Elizabeth river, is a navy-yard, with a dry-dock built of hewn granite.

The Seaboard and Roanoke railroad connects Portsmouth with Weldon, on the route of the Washington and Wilmington line.

The commerce of Norfolk exceeds that of any other place in Virginia, and several hundred thousand dollars are invested in manufactures.

The population in 1810, was 9,193; in 1820, 8,478; in 1830, 9,816; in 1840, 10,920; in 1850, 14,326.

NORTH CAROLINA, one of the United States, situated between 33° 53' and 36° 33' north latitude, and 75° 45' and 84° west longitude from Greenwich, and is bounded north by Virginia, east and southeast by the Atlantic, south by South Carolina and Georgia, and west and northwest by Tennessee. Superficial area 43,800 sq. miles.

Physical Aspect.—This state, like South Carolina and Georgia, presents a variety of surface, soil, and climate. It may be physically divided into three zones; first, the flat sea border, including numerous small islands; second, the sand hill zone, spreading by an indefinite outline between the sea border, and the third, a hilly and partly mountainous tract, beyond the lower falls of the rivers. The maritime section, which extends from 80 to 100 miles inland, is nearly a dead level, varied only by deeply-indented, though shallow sounds, and occasional openings, in the immense forests of pine, with which it is covered, and extensive glades, marshes,

or swamps. In the northeastern part, extending into Virginia, lies the Great Dismal swamp, thirty miles long, and ten broad, thickly wooded with pine, juniper, cypress, and in the drier portions with red and white oak. Between Albemarle and Pamlico sounds is the Alligator, or Little Dismal swamp, which contains a lake. Here the soil is generally sandy and poor, though on the banks of some of the streams, particularly those of the Roanoke, it is remarkably fertile. In other instances, there are ridges of oak land, of a dark-colored and fruitful soil. After traversing this tedious plain, we are relieved by the appearance of the sand-hills, in the middle section, which, in general, presents an indifferent soil. But the third, the hilly and mountainous section, abounds in excellent soil, pure fountain water, and salubrious air. Those portions of the state lying west of the mountains are also exuberantly fertile, and will richly reward the planter's toil.

Mountains.—The Blue ridge constitutes the main range through the western part of the state; but on most maps is made to represent the outer chain of the Appalachian system, as in the contiguous states. Strictly speaking, there are two other chains, between the Blue ridge and the ocean. Black mountain, in Yancey county, is the highest land in the United States, east of the Rocky mountains, being 6,476 feet above the level of the sea. Roan mountain is 6,038 feet high, and Great Father mountain 5,556 feet. The chain in the extreme western part of the state, in which Roan mountain is situated, is known by different names, as Smoky, Unica, Bald, Yellow Iron, and Stone mountains.

Rivers, Lakes, Bays, and Sounds.—The principal rivers are, the Chowan, Roanoke, Tar, Neuse, Cape Fear, Waccamaw, Lumber, Catawba, Broad, Yadkin, North, Pungo, Hiwassee, Pamlico, and the Little Tennessee. Lake Phelps, Alligator, Mattimuskeet, and Waccamaw, are situated in this state. The principal sounds and bays are, Pamlico and Albemarle sounds, and Onslow and Raleigh bays.

Islands and Capes.—The chief islands are, Roanoke, Smith's, Brodie's, Currituck, Hatteras, and Cove. Capes Lookout and Fear are much dreaded by mariners; and Hatteras is considered the most dangerous headland on the American coast.

Climate.—Like most of the other southern states, North Carolina is somewhat varied in its climate, occasioned by physical peculiarities of its different parts. In the lower districts, intermittents are frequent during the summer and autumn, and the countenances of the inhabitants often have a pale yellowish hue, occasioned by the prevalence of bilious disease. In winter, pleurisy is frequent, as well as inflammation of the lungs. In the western and hilly parts of the state the air is elastic, salubrious and pure, which renders the country as healthy as any part of the United States. The summers are hot, though the evenings are refreshing and cool. Autumn is temperate and serene; and in some years the winters are so mild, that autumn may be said to continue till spring. The winters in the mountains, however, are visited by frost and snow, and the rigors of the climate are nearly as severe as at the north.

Productive Resources.—The great staples of the south, tobacco, cotton, and rice, are extensively cultivated. Other products are, silk, wool, lumber, turpentine, spirits of turpentine, resin, pitch, tar, hay, hemp, flax, wine, sugar, wheat, rye, barley, oats, buckwheat, potatoes, and Indian corn; also, horses, mules, neat cattle, swine, and poultry. Of the mineral resources, gold, coal, and iron, are the most important. The gold region lies on both sides of the Blue ridge, and extends to the eastward of the river Yadkin. It occurs in fine grains, in small masses, or lumps, weighing from one to two pounds, and in veins.

Manufactures.—North Carolina being an agricultural state, but little attention has been paid to manufactures. There are, however, about thirty cotton factories in the state, which consume about 5,000,000 pounds of cotton annually. There are also a few woollen factories. Other manufactures are, paper, leather, furniture, cutlery, carriages, &c., though none of them are carried on to any great extent.

Railroads and Canals.—There are some 600 miles of railroads in operation and under construction, in North Carolina. The principal roads completed at present are, the Raleigh and Gaston, 87 miles, and the Wilmington and Weldon, 167 miles, which connect the towns indicated by their titles. The only canals wholly within the state are, the Weldon, extending around the

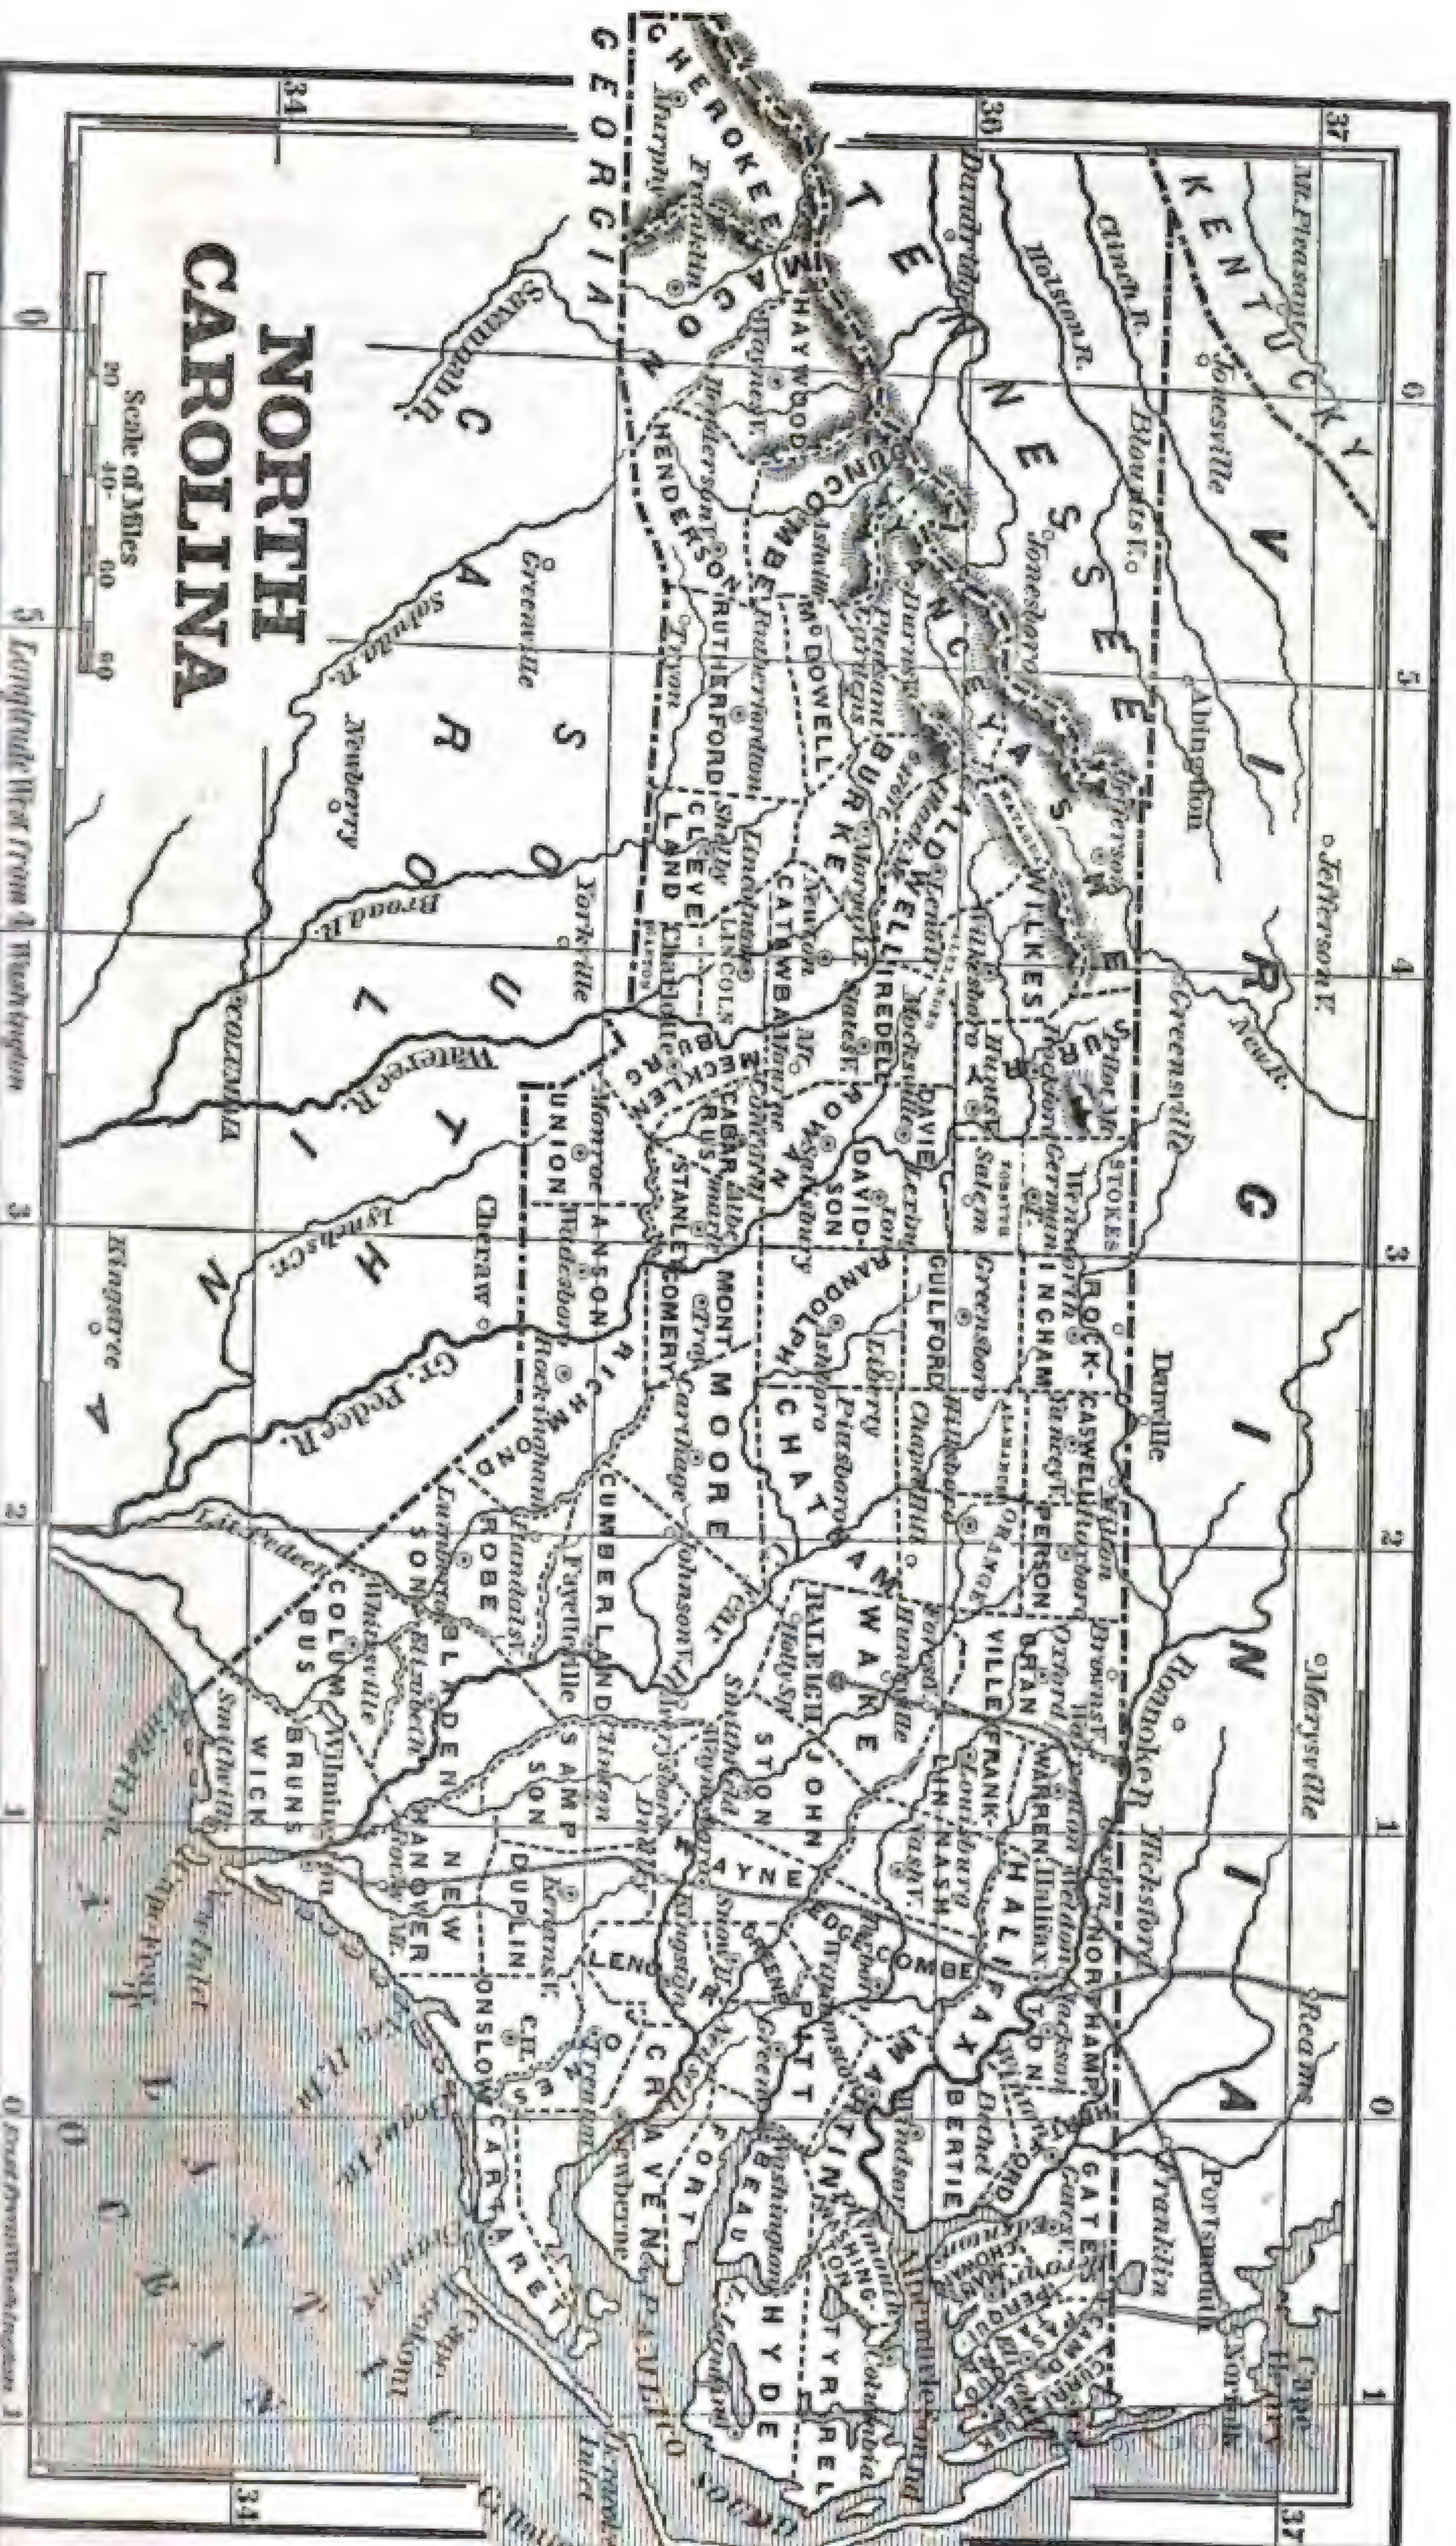

NORTH CAROLINA

Scale of Miles
0 10 20 30 40 50

Longitude West from Washington

Distance from Washington

falls of the Roanoke, 12 miles, and a short one connecting Harlow and Clubfoot creeks.

Population.—In 1790, 393,751; in 1800, 478,103; in 1810, 555,500; in 1820, 638,829; in 1830, 737,987; in 1840, 753,419; in 1850, 868,903.

Number of slaves in 1790, 100,572; in 1800, 133,296; in 1810, 168,824; in 1820, 295,017; in 1830, 235,601; in 1840, 245,817; in 1850, 288,412.

Commerce.—North Carolina has but a limited foreign commerce, its imports and exports bring less than a million annually. Its coasting trade, however, is considerable. The shipping owned within the state is about 50,000 tons.

Education.—The literary institutions are, a university at Chapel Hill, Davidson college, in Mecklenburgh county, and Wake Forest college. There are about 200 academies, and 1,500 common schools in the state.

History.—North Carolina embraces a portion of the ancient territory of Florida, as named by Ponce de Leon, in 1512, and was, more recently, a portion of South Virginia, as granted by James I. of England, in 1606. It was within the limits of this state that Sir Walter Raleigh's unsuccessful attempts at settlement were made, in 1584 to 1590. In about the year 1630, another grant was made to Sir Robert Heath, of the tract lying between the thirtieth and thirty-sixth degrees of north latitude, which was erected into a province, under the name of "Carolina." No settlements were made under this grant, however, and consequently it was declared void. The first permanent settlement in the region now called North Carolina was made on the east bank of the river Chowan, near the present village of Edenton, in about the year 1650, by a company of emigrants from Virginia, who fled from religious persecution. In 1661, a small English colony, from Massachusetts, purchased a tract of land, on Cape Fear river, from the Indians, and formed a settlement on Old Town creek, a few miles below Wilmington; but the enterprise was abandoned from the hostility of the Indians. Two years later the province was granted, by Charles II., to Lord Clarendon and seven others, and a government was established over the infant settlement on the Chowan, which was called the "Albemarle County Colony," in compliment to one of the proprietors, the duke of Albemarle. In 1665, their grant was enlarged, embracing the territory between 31° and 36½° north latitude, extending westward to the South sea. In 1667, a new settlement was established on Cape Fear river, near the abandoned site of the New England colony, called "Clarendon county," which was again surrendered to the Indians before the year 1690. In 1707, a company of French protestants, who had previously settled in Virginia, removed to Carolina, and two years later were followed by 100 German protestant families, who were driven from their homes by religious persecution. In 1729, the crown of England purchased the whole of Carolina, which had hitherto been under the superintendence of the same board, for £17,500; and the king divided it into two provinces, "North" and "South," which have ever since been continued separate. A convention, or a kind of Congress, composed of military officers, assembled at Charlotte, in the county of Mecklenburgh, in 1775, and declared the people independent of British rule. In 1776, this state formed a constitution, which, with subsequent modifications, continues to the present time. In 1789, it ratified the constitution of the United States, and was admitted into the Union as an independent state.

Government.—The legislative power is vested in a senate of 50, and a house of commons of 120 members, both elected biennially, on the first Thursday in August, by the people. The executive power is vested in a governor, elected biennially by the people, who is not eligible for more than two terms in succession. The judicial power is vested in a supreme court, of three judges, and a superior, or circuit court, of seven judges, besides inferior courts. The judges of the supreme and superior courts are elected by the legislature, and hold office during good behavior. All free white males, of 21 years of age, who have resided in the state one year, are entitled to vote for governor, and members of the lower house; to qualify to vote for senators, a freehold of fifty acres, of six months' possession, is also required.

NORTHWESTERN TERRITORY, a vast unorganized territory, the greater portion of which has never been explored, except by the Indians. It lies between 43° and 49° north latitude, and 99° and 114° longitude west from Greenwich; and is bounded north by the British possessions, east by Minnesota, south by Nebraska territory, and west by the Rocky mountains, which divide it from Oregon Territory. Its superficial area is about 200,000 square miles.

Physical Aspect.—The greater part of this immense territory is watered by the Missouri river and its numerous tributaries. The Yellow Stone, the largest tributary, extends its branches to the very base of the Rocky mountains, and to near the sources of the Nebraska. A mountain ridge, which branches from the great Rocky mountains, in about 42° north latitude, traverses the country in a northeasterly direction toward Lake Winnipeg. In the eastern portion of the territory the country is partly covered with forests, but beyond this commences a vast ocean of prairie, almost level, and clothed in grass and flowers.

Climate.—In a country of such extent, generally level, naked, and open, the climate must in a great measure correspond to the latitude. Immediately on the borders of the settled states it is mild and temperate; beyond, it gradually becomes more extreme; and toward the mountains, cold, bleak, and polar. Travellers speak of encountering storms of hail and sleet in the summer. When the winds blow from the west, over the mountain summits, the cold is intense.

History.—This territory is a part of the Louisiana purchase. That portion of the country lying in the valley of the Platte is generally termed "Nebraska Territory," and as such it has been proposed to organize it. A bill for the purpose passed the house of representatives in February, 1853, but it failed to be acted on in the senate. The section of country north of this valley still retains the name of "Northwestern Territory," it being a part of the former extensive territory under that name, from which several states have been set off. As yet the whole territory is inhabited by Indians, but the time is not far distant when the pioneer will penetrate its forests and prairies, and bring under cultivation the soil that from its creation has not been turned by the labor of man.

NORWICH, city, and t., seat of justice, together with New London, of New London co., Ct., 39 ms. s. e. of Hartford; from W. 357 ms. Situated at the head of navigation of Thames river, at the junction of the Huetucket and Yantic rivers, 14 miles from Long Island sound. The main part of the city is situated on a steep acclivity, the houses being built in tiers rising one above another, present a beautiful appearance when approached from the south. Here are extensive manufactories of cotton and woollen goods, paper, hardware, pottery, &c. This location was the scene of severe contests between the Mohegan and Narragansett Indians. It was the stronghold of the latter, and here the burial-place of their kings is still to be seen. Near the city there are several picturesque falls or cataracts, and from a high rock which overhangs these water-falls, the Mohegan Indians plunged and perished, rather than fall into the hands of the Narragansetts, who were pursuing them.

The population in 1840, 7,239; in 1850, 10,965.

OHIO, one of the
 United States, dra-
 ted between 38° 34'
 and 42° north lati-
 tude, and 80° 35' and
 84° 57' west longi-
 tude from Green-
 wich; and is bound-
 ed north by Michigan
 and Lake Erie, and
 east by Pennsylvania,
 southeast by Virginia,
 from which it is sep-
 arated by Ohio river,
 south by Kentucky,
 from which it is also

separated by the same river, and west by Indiana. Its
 superficial area is 40,000 square miles.

Physical Aspect.—This state presents a considerable
 diversity of surface, as well as of climate. A range of
 comparatively high land divides the waters which flow
 into Lake Erie from those which descend into the Ohio,
 forming two inclined plains of unequal areas. The
 northern, or Erie plain, does not exceed 25 miles in
 width at the northeast extremity, but expands to 80
 miles in width along the east boundary of Indiana.
 The mean elevation of the apex of this range is estimated
 to be 1,000 feet above the ocean tides; so that, from its
 proximity to the lake, the descent of the streams, flow-
 ing in this direction, is somewhat precipitate, and all
 roll over direct cascades, or falls. On the other hand,
 the plain inclined toward the Ohio is very gradual in its
 descent, and falls of any kind are rarely to be found.
 The central portion of the state occupies an immense
 plateau, or table-land, comparatively level, and in part
 marshy, which consists of a diversity of soil, from rich
 alluvion and prairie, to wild oak "barren." Along the
 Ohio river, for fifty or sixty miles back, the country is
 hilly, and in some parts quite rugged, caused by the
 abrasion of the streams; but the chief part of the cen-
 tral table-land remains unchanneled, presenting a series
 of broad prairies and other plains. A similar feature is
 observable along the Ohio shores of Lake Erie, but the
 surface is less broken, and the hills are more moderate
 in their height.

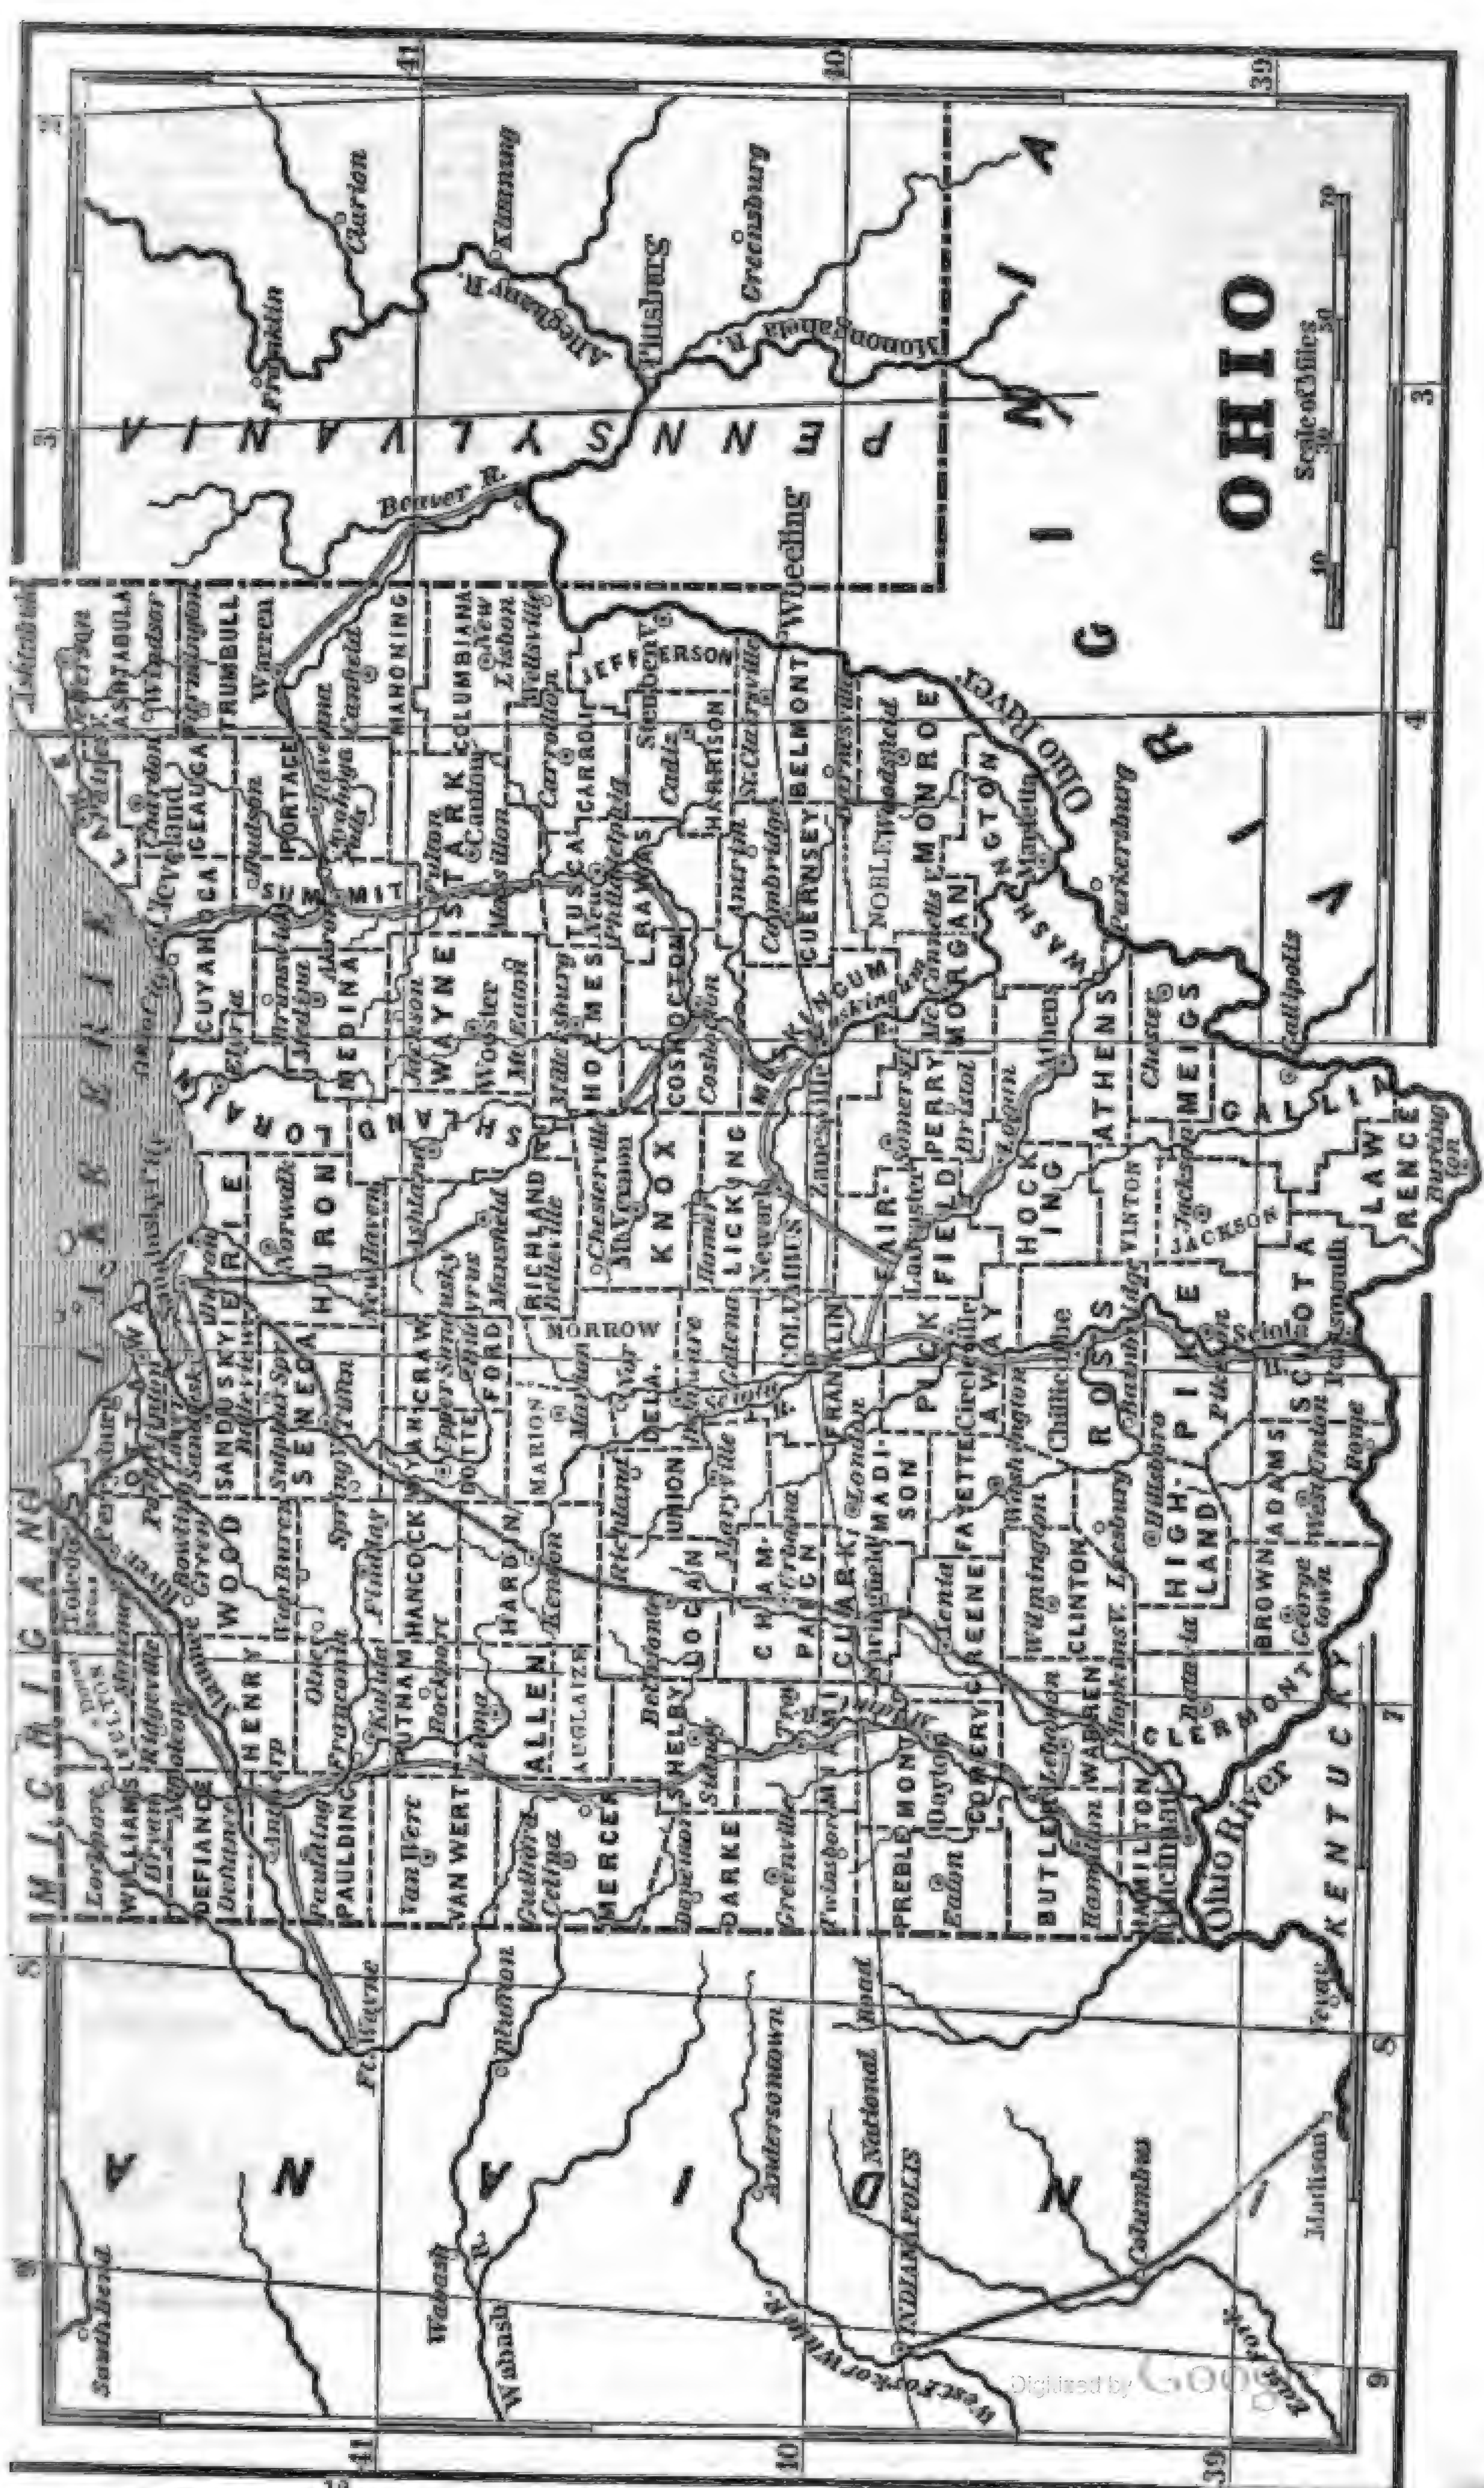

Rivers, Lakes, and Bays.—The principal rivers of this
 state are, the Ohio, Muskingum, Hockhocking, Scioto,
 Great and Little Miami, Maumee, Sandusky, Huron,
 Vermilion, Black, Cuyahoga, Grand, Ashtabula, Ae-
 glaize, Tuscarawas, Walhonding, Olentangy or Whet-
 stone, and St. Mary's. Lake Erie lies partly in Ohio, in
 the western part of which are Maumee and Sandusky
 bays; there is also a good harbor at Cleveland.

Climate.—The climate, in general, may be regarded
 as healthy, except in the vicinity of stagnant marshes
 and sluggish streams, where, in summer and autumn,
 intermittents usually prevail. Spring and autumn are
 pleasant; but the winters, though comparatively mild,
 are subject to great fluctuations of temperature, varying
 from temperate to 16° Fahrenheit below zero.

Productive Resources.—The chief products are, horses,
 mules, neat cattle, sheep, swine, poultry, eggs, butter,
 cheese, beef, pork, wax, silk, wool, wine, sugar, hops,
 tobacco, madder, hay, flax, hemp, lumber, pot and
 pearl ashes, wheat, rye, barley, oats, buckwheat, pota-
 toes, and Indian corn. Of the mineral resources,
 coal, iron, and salt, are the principal, the latter of
 which is extensively manufactured from salt creeks
 and springs.

Manufactures.—The manufactures of Ohio are already
 of considerable importance, and are rapidly increasing,
 in both variety and extent. The abundance of water-
 power, and the cheapness of coal, will make this section
 of the Ohio valley the seat of vast manufacturing indus-
 try. The more important articles of manufacture are,
 machinery, cotton, woollen, silk, and mixed goods,
 leather, paper, ironware, agricultural and mechanical
 implements, cabinetware, hats, steamboats, &c. The
 number of manufacturing establishments in the state in
 1850, producing each \$500 worth or more annually,
 was 10,550.

Railroads and Canals.—Ohio has an extensive system
 of railroads and canals, communicating with every
 important point. There are about 2,000 miles already
 in operation, or in rapid process of construction. The
 principal of them are, the Cleveland, Columbus, and
 Cincinnati, 255 miles; the Cincinnati and Sandusky,
 218 miles; Cleveland and Pittsburgh, 100 miles; the

OHIO

Scale of Miles
0 10 20 30 40

Ohio and Pennsylvania, running through the centre of the state, and connecting the Indiana with the Pennsylvania roads; and the Lake-Shore road, uniting Illinois and Michigan with New York and the eastern states. The most important of the canals in the state is the Ohio canal, 309 miles long, connecting the waters of Lake Erie at Cleveland with those of the Ohio river at Portsmouth. The aggregate length of the canals is about 650 miles. The tolls collected are about \$800,000 annually.

Commerce.—With the exception of the trade with Canada, the direct foreign commerce of Ohio is trifling, the exports and imports of 1850 amounting to only \$800,000. But the coasting and river trade is immense. Amount of shipping enrolled in the state about 65,000 tons.

Population.—In 1790, about 3,000; in 1800, 45,365; in 1810, 230,760; in 1820, 581,434; in 1830, 937,903; in 1840, 1,519,467; in 1850, 1,980,408.

Education.—The facilities of education in Ohio are ample. The permanent school fund amounts to rising \$600,000. The principal literary institutions are, the University of Ohio, at Athens, founded in 1804; the Miami university, in 1809; Cincinnati college, in 1819; Franklin college, at New Athens, in 1825; Western Reserve college, at Hudson, in 1826; the Kenyon college, at Gambria, in 1827; the Granville college, at Granville, and Woodward college, at Cincinnati, in 1831; the Oberlin college, in 1834; the Marietta college, in 1835; the St. Xavier college, at Cincinnati, in 1840; the Ohio Wesleyan university, at Delaware, in 1842; and the Wittenberg college, at Springfield, in 1845. Law, medical, and theological schools are attached to many of the above. There are near 200 academies, and over 5,000 free common schools established throughout the state. The state has also provided liberally for the education and support of the deaf and dumb, blind, and lunatic. The buildings, with spacious grounds for each class, are situated at Columbus.

Government.—The legislative power is vested in a general assembly, consisting of a senate and house of representatives, elected biennially, on the second Tuesday in October. The senate consists of 35 members, and the house of representatives of 100 members. The legislature meets biennially at Columbus, the first Monday in January. The executive department consists of a governor, lieutenant-governor (who is president of the senate), secretary of state, auditor, treasurer, and an attorney-general, who are chosen by the people at the biennial election. They hold their offices for two years, except the auditor, whose term is four years. The board of public works, consisting of three members, is elected by the people, one annually, for the term of three years. The judicial power is vested in a supreme court, in district courts, courts of common pleas, courts of probate, justices of the peace, and in such other courts, inferior to the supreme court, as the general assembly may establish; the five supreme court judges hold their office five years, the term of one of the judges expiring annually. There are nine judges of the common pleas, elected by district for five years. All judges are elected by the people. The elective franchise is enjoyed by every white male citizen of the United States, of the age of 21 years, a resident of the state one year next preceding the election.

History.—The French explored the region, and erected forts along the banks of the Ohio river, as far up as Pittsburgh, Penn., as early as 1754. In 1786, what now constitutes the state of Ohio, was erected, by act of Congress, into the "Western Territory," the name of which was afterward changed to the "Territory Northwest of the River Ohio." The first permanent settlement was made at Marietta, in 1788, by a small colony from Massachusetts, and the year following a settlement was made near Cincinnati; this was followed by another at Cleveland, in 1796, the emigrants being mostly from New England. Soon after the treaty of Greenville, in 1795, Michigan was surrendered by Great Britain to the United States, and was annexed to the territory northwest of the river Ohio in 1800. The same year Connecticut relinquished her jurisdiction over the "Western Reserve." In 1799, the first territorial legislature met at Cincinnati, and organized the government. In 1802, Ohio was detached from Michigan, and admitted into the Union as an independent state. Her constitution was framed the same year, at Chillicothe (the capital of the state until it was removed to Columbus, in 1812), and continued in operation till 1851, when

a new constitution was framed at Columbus, by a convention of delegates, and adopted by the people.

OHIO COUNTY, situated in the northwest corner of Virginia, with Ohio river on the northwest. Area, 125 square miles. Face of the country broken; soil productive. Seat of justice, Wheeling. Pop. in 1810, 8,175; in 1820, 9,188; in 1830, 15,590; in 1840, 13,357; in 1850, 18,006.

OREGON TERRITORY, situated between 42° and 46° north latitude, and 109° and 124° longitude west from Greenwich; and is bounded on the north by Washington Territory, from which it is separated in part by the Columbia river, east by the Rocky mountains, which separate it from the Northwest or Nebraska territory, south by Utah and California, and west by the Pacific. Its superficial area is about 200,000 square miles.
Physical Aspect.—Most of the surface of this territory is mountainous and broken. Westward of the Rocky mountains the country is divided into three sections, separated from each other by ranges, running nearly parallel with the shores of the Pacific, each of which have a distinction of soil, climate, and production. The region between the Rocky and Blue mountains is rocky and sterile, traversed in various directions by stupendous spurs, and affords but little level ground. The middle section generally consists of a light sandy soil, though in the valleys it is of rich alluvion, and barren on the hills. The soil along the coast is less broken, and for the most part is well adapted for agricultural purposes, wherever it can properly be irrigated.
Mountains.—Along the easterly boundary lie the Oregon or Rocky mountains, several of the spurs of which traverse the upper region of this territory, and are of stupendous height. About 250 miles at the westward is the Blue mountain range, which is irregular in its course, and occasionally interrupted, but generally extends from a point east of north to the south of west. About 80 to 110 miles from the coast, and about 200 miles at the westward of the Blue mountains, is the Cascade or President range, the highest peaks of which are called Mount Jefferson, Mount Rainier, Mount Baker, Mount St. Helen's (an extinct volcano), Mount Pitt, and Mount Hood. Some of these are elevated from 12,000 to 17,000 feet above the level of the sea, and are perpetually crowned with snow. In the south part of the territory is the Klamath range, which forms the northern boundary of California.
Rivers and Harbors.—The chief river is the Columbia, which takes its rise near the sources of the Missouri, along the western dividing ridges of the Rocky mountains. Its principal tributaries are, the Lewis or Saptin, Flathead or Clark's, Kootanie or Flatbow, Chute or Falla, John Day's, Willamette, and Okonagon. The Klamath and Umpqua are considerable rivers, which empty into the Pacific. The Columbia river and Puget's sound afford the only good harbors at present on the coast of Oregon. The trade of that territory is principally through the former. Puget's sound is one of the best harbors on the Pacific coast. It has numerous narrow bays or inlets, all of them capable of floating the

largest vessels, extending back into the surrounding country in every direction, and is accessible at all seasons of the year.

Climate.—The climate of the region between the coast and the first range of mountains though not regarded as unhealthy, is temperate during the year, and is not subject to the extremes of heat and cold that are experienced in corresponding parallels on the eastern coast. The mean annual temperature is about 54° Fahrenheit. The rain begins to fall in November, and usually continues at frequent intervals till March. Snow sometimes falls, but rarely endures more than two or three days. From the proximity to the mountain winds frosts sometimes occur in August. The climate of the middle region, though colder than that along the coast, is favorable to the growth of the small grains and grass. In the higher mountain regions the climate is severe, the temperature often varying 40° between sunrise and noon. Here it seldom rains, and dews are rarely known. On the most elevated parts deep snows occur, and abide during the year.

Productive Resources.—The chief products are, horses, mules, neat cattle, sheep, swine, furs, wool, lumber, wheat, rye, oats, barley, potatoes, and Indian corn. Oregon is peculiarly adapted to grazing, butter and cheesemaking, for the cattle range all winter, and feed upon the grass, which is never entirely killed by frost, nor covered with snow. The mineral resources of the country are as yet unknown.

Commerce.—Since the discovery of gold in California, a great demand has arisen for the agricultural productions and lumber (which can be furnished to an almost unlimited extent) of Oregon, and, as a consequence, a commercial trade has sprung up. Commercial intercourse is also maintained with the Sandwich islands, and the Russian settlements on the north.

Education.—A female seminary is established at Portland, and three academies at Oregon City, and well-regulated schools in all the principal settlements.

Population.—In 1850, 13,993.

History.—Oregon embraces Oregon as claimed by Spain, prior to 1820, or a part of the territory claimed by Russia, prior to 1824, or a portion of the country claimed by Great Britain prior to 1846. Although this coast was explored by the Spaniards, in about the year 1542, and by Sir Francis Drake, in 1578, it would appear that no one penetrated far into the interior before 1792, when Captain Robert Gray, of Boston, Massachusetts, entered Oregon, or Columbia river, in the ship "Columbia Rediviva," and gave to this river the present name it bears, after that of his vessel. In 1805, Lewis and Clarke were sent out by the United States government, with the express object of exploring the sources of the Missouri, and the region beyond the Rocky mountains, and descended the river Columbia to the Pacific, and returned the following year by the same stream. In 1808, a trading-house was established by the "Missouri Fur Company" on Lewis river, the first white settlement of any kind ever made on the waters of the Columbia. In 1810, a private expedition, called the "Pacific Fur Company," was undertaken, at the expense and under the direction of John Jacob Astor, of New York, who, in 1811, established a colony of one hundred and twenty men, near the mouth of the latter, and called the principal depot "Astoria," after his own name. Two years after, settlements were made on the Willamette and Lewis rivers, and other places in the interior. Soon after the commencement of the war between Great Britain and the United States, in 1813, Astoria was sold to the Hudson Bay Company, but was restored to the original proprietors in 1818, agreeably to the first articles of the treaty of Ghent. The sovereignty of Oregon was for a long time subject to a tedious and vexatious controversy by France, Spain, Great Britain, and Russia, with our government. In the convention of 1818, between the United States and Great Britain, the right of both parties to the country was mutually conceded. After much controversy the northern boundary was finally established at 49° in 1846, and a territorial government was organized, under an act of Congress, in 1848. In March, 1853, the territory was divided, the southern portion retaining the original name, and the northern part was organized as Washington territory.

OREGON COUNTY, situated on the south boundary of Missouri. Area, — square miles. Seat of justice, Thomasville. Pop. in 1850, 1,432.

OREGON CITY, p. v., Clackamas co., Oregon. The principal settlement in the territory, and from its favorable position in the fertile valley of Willamette, or Multnomah river, 30 miles from its entrance into the Columbia, will probably become the business and political metropolis of the territory. It is in latitude 45° 30' north, and longitude 45° 45' west of Washington, at the head of navigation, below the falls of the Willamette, which furnish a most valuable water power. From Fort Vancouver, on the Columbia, it is 20 miles south; from Astoria, 100 miles southeast; and 2,171 miles northwest of Independence, on Missouri river, which is 1,072 miles west of Washington. Most of the settlers are Americans, and the swift tide of migration toward California, has contributed considerably to its growth. There are a number of stores, dwellings, mills, schools, &c., which are receiving accessions. The pop. in 1848, was from 200 to 300; in 1850, 702.

PATERSON, city, seat of justice of Passaic co., N. J., situated on both sides of the Passaic river, 17 miles northwest of New York. It owes its existence and prosperity to the great water-power furnished by the Passaic. A large number of cotton factories, as well as other establishments for making machinery, firearms, and paper, are here in successful operation. The genius of Alexander Hamilton first perceived these natural advantages, and devised the means for their application. Difficulties at first prevented the success of his plans, but time has proved their practicability and sagacity. The beauty of Passaic falls, which are near this place, is not less admirable than their utility. Hither many resort in the summer, to enjoy the picturesque scenery and healthful air.

Paterson contains several churches and institutions for improvement in knowledge. The Morris canal passes near the south part of the city; the Paterson railroad connects it with Jersey City and New York, and the Ramapo and Paterson railroad communicates with the Erie railroad at Ramapo.

The population in 1810, was 292; in 1820, 1,578; in 1830, 7,731; in 1840, 7,596; in 1850, 11,138.

PENNSYLVANIA, one of the United States, so called in honor of the father of its illustrious founder, lies between 74° 44' and 80° 34' west longitude from Greenwich, and 39° 43' and 42° 17' north latitude, and is bounded north by Lake Erie and New York; east by New York and New Jersey, from which it is separated by Dela-

ware river; south by Delaware, Maryland, and Virginia; and west by Virginia and Ohio. Its superficial area is 46,000 square miles.

Physical Aspect.—The surface of this state is greatly diversified by mountains, hills, and dales. It contains but a few large tracts of level land, and these generally occur along the borders of streams. With one or two partial exceptions, it is composed of two great plains, declining from the dividing ridge of its waters. The eastern declivity, drained by the Delaware and Susquehanna, and their tributaries, gradually descends to the level of the tide; the western in like manner, drains the numerous confluent of the Ohio. The southeastern counties may be regarded as undulating, rather than hilly, and are under a high state of cultivation, particularly along the Susquehanna. Most of the central part of this state is mountainous, often interspersed with high and sterile ridges, occurring in close succession, interlocking each other, and enclosing long and pointed valleys between. It is within this region, too, that the fertile valley of Wyoming occurs, surrounded by a lofty chain, known at different points by as many local names. Most of the country west of the Alleghenies is hilly, with numerous irregular and abrupt elevations, not disposed in regular chains. In this part of the state, particularly along the streams, the soil is highly fertile; and between the Alleghany river and Lake Erie, as well as on the western border, the soil is good.

Mountains.—The structure and position of the mountains in this state have given it an aspect peculiar to itself, and constitute its most prominent features. South mountain extends from New Jersey, interrupted by the Delaware, below Easton, in a southwesterly direction across the state to Adams county, on the borders of Maryland. Next to this, the Blue mountain, or Kittatinny range, extends from the western part of New Jersey, also interrupted by the Delaware, to Parnell's Knob, near the south border of this state. Next come Second, Sharp, and Broad mountains, the latter of which is an irregular elevation, with a broad and barren table-land at its top. Between the Kittatinny and Alleghany ranges is what is called the Appalachian chain, which consists of elevated and nearly parallel ridges, in some instances twenty miles apart, and frequently divided by subordinate ridges. The great Alleghany ridge extends nearly across the state, presenting on its southeasterly side an abrupt ascent, but a gentle descent on the northwesterly slope, consisting of an elevated and undulating table-land. Westward of this range are Laurel ridge, and Chestnut ridge, running parallel therewith.

Rivers and Lake.—The principal rivers are the Dela-

ware, Schuylkill, Lehigh, Susquehanna, Juniata, Gettysburg, Alleghany, Monongahela, Ohio, Clarion, and Alleghany. Lake Erie bounds this state on the west.

Islands.—Tincum island, in the Delaware, and Presque Isle, on the south side of Lake Erie, are the most worthy of note.

Climate.—The climate, though generally healthy and temperate, is fluctuating and varied. The extreme temperatures are from 20° below zero to 90° Fahrenheit above. On both inclined plains, it is a rare occurrence that the rivers in winter are not more or less frozen, and rendered unnavigable. Receding to the more elevated tracts and high mountain valleys, winter is visited by occasional frosts, which, in some seasons, appear in every month of the year. In the higher regions, abiding snows usually appear in December, and remain until March. Spring and summer are usually delightful seasons in all parts of the state.

Productive Resources.—The principal products are horses, mules, neat cattle, sheep, swine, poultry, butter, cheese, wax, peaches, sugar, wine, hops, flax, silk, wool, hemp, flax, hay, lumber, wheat, rye, barley, oats, buckwheat, potatoes, and Indian corn. The mineral wealth of this state is immense, consisting principally of coal, iron, and salt. The coal is of two kinds, "bituminous," which occurs in great abundance on the western side of the Alleghenies, and "anthracite," which is found only on the easterly side of the mountains. The iron, which is of superior quality, is extensively wrought, and is inexhaustible in its supply. Toward the southwest part of the state salt springs abound, from which is manufactured large quantities of salt.

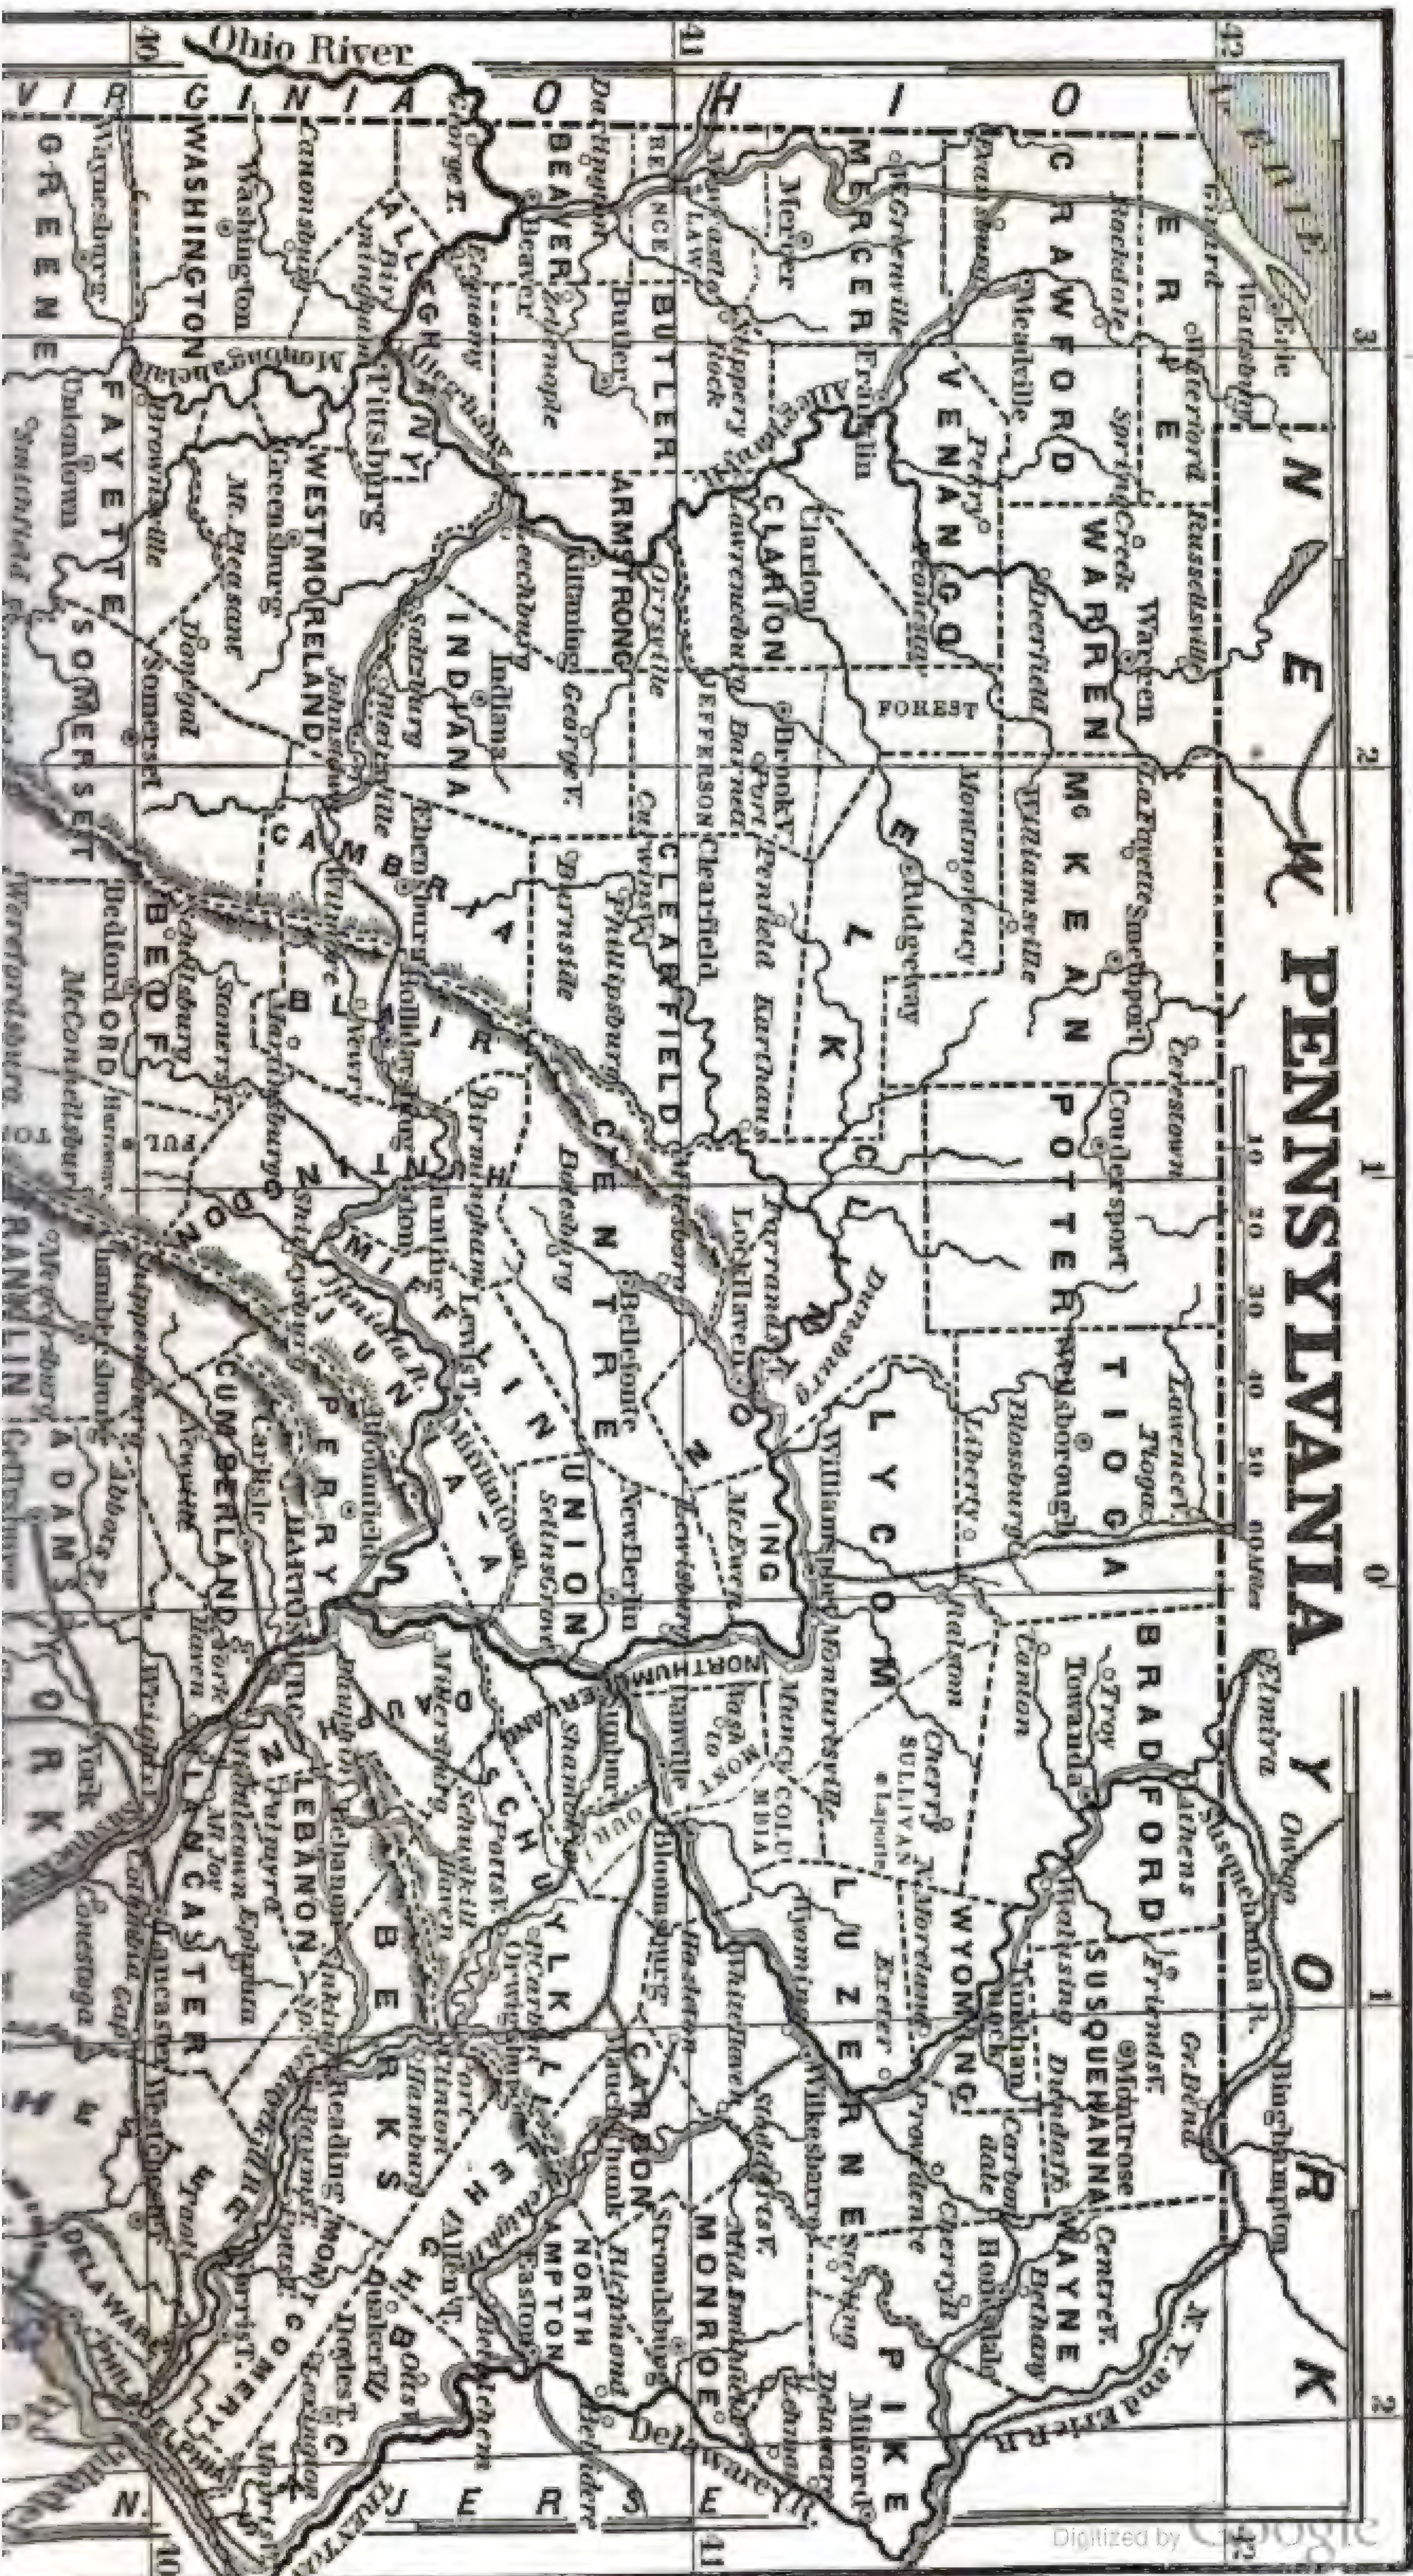

Manufactures.—The manufactures of Pennsylvania are varied and extensive. The number of iron works in the state are rising 500, and the capital invested is \$20,000,000, employing over 40,000 men. Next in importance are cotton and woollen fabrics, in which a capital of \$8,000,000 is invested, employing 15,000 men and the annual products amounts to about \$10,000,000. Leather, paper, and glass, are among the minor manufactures.

Railroads and Canals.—Pennsylvania has greatly extended and facilitated her trade by her internal improvements. The great central line of railroad communication extends from Philadelphia to Lancaster, 70 miles, thence to Hollidaysburgh, 175 miles, thence to Johnstown, 36 miles, and thence to Pittsburgh. From Pittsburgh it continues west to connect with the roads in Ohio. The principal roads beside the line above named, are, the Reading, 92 miles; Philadelphia and Baltimore, 98 miles; and the Cumberland Valley, 110 miles. There are about 50 railroads in the state, of an aggregate length of 1,500 miles. The railroads of Pennsylvania have been built at a cost of \$45,000,000. Among the canals of Pennsylvania are, the Eastern and Juniata sections of the Pennsylvania canal, extending from the Susquehanna to Hollidaysburgh, 172 miles; and the western division, extending from Johnstown to Pittsburgh. From Pittsburgh the Beaver canal runs into Ohio, 31 miles, and the Erie Extension canal will continue the line to Erie, on the lake, 105 miles. The whole length of canals in the state is 1,280 miles, 848 miles of which are owned by the state, and 432 miles by companies. The total cost of the canals of Pennsylvania is \$35,000,000.

Commerce.—The exports of Pennsylvania, to foreign ports, in 1850, amounted to \$4,501,606; the imports to \$12,066,154. The total shipping of the state amounts to 260,000 tons, of which about 65,000 tons are engaged in foreign trade.

Education.—The colleges of Pennsylvania are numerous. The principal are, the university, at Philadelphia, founded in 1755, with a medical school attached; Dickinson college, at Carlisle, founded in 1783, to which is attached a law school; Jefferson college, at Canonsburgh, founded in 1802; Washington college, founded in 1806; Alleghany college, at Meadville; Pennsylvania college, at Gettysburgh; Lafayette college, at Easton; Marshall college, at Mercersburgh; and the Western university, at Pittsburgh. Jefferson and Philadelphia medical colleges are located at Philadelphia. There are theological schools at Gettysburgh, Mercersburgh, Alleghany, Canonsburgh, Pittsburgh, Meadville, and Philadelphia. There are in the state about 500 academies, and 10,000 common schools.

Population.—In 1790, 434,373; in 1800, 602,365; in 1810, 810,091; in 1820, 1,049,458; in 1830, 1,348,233; in

1840, 1,724,031; in 1850, 2,311,786. Number of slaves in 1790, 3,737; in 1800, 1,706; in 1810, 795; in 1820, 211; in 1830, 403; in 1840, 64.

Government.—The government is vested in a governor, senate, and house of representatives. The governor is elected for three years, and is ineligible for the next three years; the senate for three years, one third, annually, in districts; and the representatives annually, at the state election, second Tuesday in October. The judicial power is vested in a supreme court, courts of oyer and terminer, common pleas, and other inferior courts. The judiciary is elected by the people. The right of suffrage is vested in every white freeman of twenty-two years of age, who has resided in the state one year, and paid a tax. White freemen, between twenty-one and twenty-two years of age, having resided in the state a year, may vote without having paid a tax.

History.—The Dutch, from their first settlement upon Manhattan island, carried on trade upon the banks of the Delaware; but there seems not to have been a permanent settlement in Pennsylvania until about the year 1640, when a fort was erected upon the island of Tinicum by the Swedes, and a number of settlements were soon after made. In 1681, William Penn obtained a grant from Charles II., of the lands northward of Maryland, and westward of Delaware, which was called "Pennsylvania." In 1682, the territories (the present state of "Delaware") were annexed to his grant, and thus remained until 1691, when they withdrew from the Union. The year following, Penn's provincial government was taken from him, and Delaware was reunited to Pennsylvania. In 1694, Penn was restored to his proprietary right, and the two colonies continued their union until 1703, when they agreed on separation, and never after united in legislation, although the governor of Pennsylvania continued to preside over both, until the three lower counties on the Delaware, as such, were represented in the first Congress in New York, in 1775. The first permanent settlement in Pennsylvania was made on Tinicum island, just below the mouth of the Schuylkill, in 1640. The first deliberate assembly was convened at New Castle, in 1682. The second assembly was held at Philadelphia, in 1683. Penn died in 1718, leaving his interest in Pennsylvania, as an inheritance to his children, in whose possession it remained until the Revolution, when their claim was purchased by the commonwealth for £130,000. In consequence of a controversy between Maryland and Pennsylvania, respecting their common boundaries, a line was finally fixed in 1762, by actual survey, by two eminent English engineers, Charles Mason and Jeremiah Dixon, and since that time the boundary between these states has been known by the name of "Mason and Dixon's Line." The last remaining portion of Pennsylvania, lying in the northwest portion of the state, not previously purchased, was bought of the Indians, in 1764. In 1776, a state constitution was framed, which continued until 1790, when it was changed, and remained in force until 1838, at which time the present one was adopted. The constitution of the United States was ratified by this state in 1787. Motto of the seal, "Virtue, Liberty, and Independence."

PENSACOLA, city, and seat of justice of Escambia county, Flor., situated on the bay of the same name, in Escambia county, about 16 miles from the gulf of Mexico, 242 miles west of Tallahassee, and 1,042 miles from Washington, is the principal port of entry and city in Florida. The site is a low sandy plain, extending into the harbor, making it too shallow near the town for large vessels, which are obliged to anchor at a distance. The entrance to the port is deeper than any other on the north coast of the gulf. Five miles above the mouth, is one of the United States navy-yards. The

city is a parallelogram, with regular streets and squares. It was among the earliest settlements in Florida, having been founded in 1689, by a Span. officer.

The population in 1830, was about 2,000; in 1840, about 2,000; in 1850, 3,164.

PETERSBURGH, p. b., Dinwiddie co., Va., a port of entry, on the south bank of Appomattox river, 12 miles from its entrance into the James, 23 miles south of Richmond, and 140 miles from Washington. The houses, which are principally of brick, have risen on the ruins of about 400 less elegant ones that were destroyed by fire, in 1815. Like Richmond it is situated at the foot of falls in the river, which afford valuable water-power; while the barrier that they present to navigation has been surmounted by a canal, passing around the falls, and admitting boats to navigate the river 80 miles above. Vessels of 100 tons anchor at Petersburg; those of larger burden come to the City Point, at the confluence of the Appomattox with the James. A railroad connects the two points; and the Washington and Wilmington railroad line communicates with the place.

The population in 1810, was 5,668; in 1820, ———; in 1830, 8,322; in 1840, 11,136; in 1850, 14,010.

PHILADELPHIA COUNTY, situated in the southeast part of Pennsylvania, with Delaware river on the southeast, and traversed by the Schuylkill. Area, 12 square miles. Face of the country, undulating; soil good. Seat of justice, Philadelphia. Pop. in 1794, 111,210; in 1820, 137,097; in 1830, 188,777; in 1840, 258,037; in 1850, 408,762.

PHILADELPHIA, p. t., Jefferson co., N. Y., 172 ma. w. of Albany; from W. 432 ma. Watered by Indus river and tributaries.

PHILADELPHIA, the first city of Pennsylvania, in population, wealth, and manufactures, and the second in the United States, is situated on a peninsula, formed by the confluence of Delaware and Schuylkill rivers. The city was laid out with beautiful regularity, in 1682, by its illustrious founder, William Penn, who gave it its name, signifying "brotherly love." Many of the noble trees which grew on the site, are now commemorated by the names of the streets running east and west, as Chestnut, Walnut, Pine, &c., while those crossing them are designated by numerals.

The ground on which Philadelphia is built is even, rising gently from each river, along which it extends for several miles. On the Delaware, the scenery is monotonous, but the water being deeper than that of the other river, the commerce and business of the city tends to this side; while the Schuylkill affords pleasing landscapes and agreeable places of residence. Many of the smaller vessels, sloops, and boats, here congregate, laden with coal, and other products of the valley of the Schuylkill: this part of the city is now rapidly increasing in wealth and business. No feature of Philadelphia is more striking than the regularity and neatness of its streets. The latter peculiarity is chiefly owing to the convenient grade, which allows the water to descend and find its way through sewers and other channels, into the Delaware. The houses, also, are more remarkable for neatness and solidity, than for splendor and show; they are mostly of brick, adorned with steps and basements of white marble, which the neighboring quarries furnish in abundance, and of fine quality. Of this material, a number of the public buildings are constructed, among which are the United States Marine hospital, the Pennsylvania bank, the Girard bank, the building formerly occupied by the United States bank, and the Girard college, which deserves more than a passing mention. A bequest of \$2,000,000, with grounds beautifully situated on an elevation near the city, was made in 1831, by Stephen Girard, an eccentric, though wealthy citizen of Philadelphia, for the purpose of founding a college for orphans. With part of these funds, has been erected one of the most magnificent structures in the United States. The college consists of five buildings, the main edifice in the centre is devoted to the education of pupils and students of various ages and acquirements; the other four, two on each side, are residences for the instructors and students. The whole is of richly-wrought white marble. The central structure is 218 feet long, and 160 feet wide, surrounded by 34 Corinthian columns, 55 feet high, and six feet in diameter. The interior is in a corresponding style of splendor. The four other buildings are each 125 feet long, and 52 feet wide.

Another building of Philadelphia, of less magnificence, probably excites greater interest. This is the old state-house, or Independence hall, where the Declaration of American Independence was decreed and signed by the first continental congress. The bell which announced to the anxious people the adoption of this great instrument, is carefully preserved in the cupola; it bears the prophetic inscription: "Proclaim Liberty throughout this land unto all the inhabitants thereof." These words were imprinted on the bell long before the use which was afterward made of it could have been known. In this building are a statue of Washington, in wood, and many other relics of the Revolution.

Philadelphia contains a large number of important public buildings and institutions. Among them are the Pennsylvania hospital, which owes its origin to Doctors Franklin and Bond; the insane asylum, outside of the city; the Almshouse, fronting Schuylkill river on its west side; institutions for the deaf and for the blind, and several other charitable establishments. Besides these, there are the American Philosophical Society, founded in 1743, by the exertions of Dr. Franklin, and

possessing a large and valuable library and cabinet; the Philadelphia library, also established under the auspices of Franklin; the Franklin Institute; the Academy of Natural Sciences; the Pennsylvania Academy of Fine Arts; and numerous other flourishing institutions for improvement in knowledge and art.

Another great structure is the United States Mint, built of white marble, with two porticoes, resting on Ionic columns, one fronting Chestnut, the other Olive street. Here a vast amount of bullion, from California and other parts of the Union is coined.

The markets of Philadelphia are among the most convenient, well-supplied, and well-conducted, in the country. To these come vast quantities of provisions from the surrounding region, with the rich and varied fruits of New Jersey and Delaware.

By the water-works on the Schuylkill, at Fairmount, a large body of water is raised into elevated reservoirs, whence it is distributed over the city by iron-pipes. A beautiful suspension bridge spans the Schuylkill at Fairmount, and several railroad bridges also lead to the city.

There are in Philadelphia a number of public parks, laid out with taste and beauty, shaded by trees, and adorned with walks, fountains, and other appropriate ornaments. In the rear of Independence hall, is Independence square, a favorite and agreeable public resort. Other public grounds are Franklin, Washington, Logan, and Rittenhouse squares.

Outside of the city are Pratt's gardens, on the Schuylkill, near the water-works, and below, Barton's gardens, both of which are interesting spots. These, with the beautiful villas, and soft but rich scenery of the river, render Philadelphia as agreeable a place of residence as any large city in the country.

Properly forming a part of the city, but having distinct municipal incorporations, are the five districts, Southwark, Moyamensing, Northern Liberties, Kensington, and Spring Garden. These with several adjacent villages, though for convenience of government and for local causes, separated from the city, in nature, connection, and interest, and for all practical purposes, may be identified with it, except perhaps in the crookedness of their streets, which form one distinctive feature from the city itself.

The manufactures of Philadelphia are varied and important, embracing nearly all the articles produced by American industry.

The railroads diverging from Philadelphia, are the Philadelphia, Wilmington, and Baltimore; the Philadelphia, Harrisburgh, and Pittsburgh; the Philadelphia, Reading, and Pottsville; the Philadelphia, Germantown, and Norristown; the Camden and Amboy; the Columbia and Philadelphia; the Philadelphia and Westchester; the Philadelphia and Trenton Branch; the Philadelphia and Germantown Branch; and the New York and Philadelphia steamer line.

The canals, communicating directly, or through rivers, with Philadelphia, are the Schuylkill Navigation, which extends to Port Carbon; the Pennsylvania; the Morris, which enters the Delaware at Easton; and the Delaware and Raritan, between Bordentown and New Brunswick on the Raritan river, which is navigable for steamboats from New York.

The population in 1685 was 2,500; in 1790, 42,520; in 1800, 70,287; in 1810, 96,664; in 1820, 108,116; in 1830, 167,188; in 1840, 258,037; in 1850, 409,353; city proper, 121,376.

 PITTSBOROUGH, p. o., Hendricks co., Ind.
 PITTSBURGH, city, Alleghany co., Pa., is situated at the head of Ohio river, which is here formed by the confluence of the Alleghany and Monongahela rivers. It is 297 miles westerly from Philadelphia, and 226 miles from Washington.
 The city is built on a broad level point of land, between the two rivers, and is enclosed by hills, which are filled with bituminous coal. This constitutes the fuel for the vast number of factories, the tall chimneys of which bristle the town, belching black clouds of smoke, that darken the air and stain the houses a dusky hue. In point of beauty, therefore, Pittsburgh has little that is attractive; yet there is something interesting in the concentration of industry and enterprise which this dark city exhibits. Here, before the settlement of the town, in 1790, stood Fort du Quesne, for a long time one of the most important posts in the hands of the French, who abandoned it in 1758, when it was

named by the British Fort Pitt. The dwellings are mostly of brick, many of them elegant and substantial, though dingy with smoke. The flourishing towns and villages which surround the city, afford pleasant sites for residence. Of these places, which are virtual suburbs of Pittsburgh, Alleghany city, on the opposite bank of the Alleghany, is the most important. The river is here spanned by a fine bridge 1,122 feet long, resting upon five stone piers; two bridges cross it at other points, and the Pennsylvania canal has a splendid aqueduct, 1,200 feet long, over the same stream. On the Monongahela are Birmingham and other settlements, which are connected by a bridge 1,500 feet long, and several ferries.

From its position, Pittsburgh is a great commercial as well as manufacturing emporium. It holds to Pennsylvania the same relation as Buffalo does to New York, being the gate of commerce between the east and the west. Hither come a large number of steamboats, during the season of navigation, from New Orleans and the valley of the Mississippi and Ohio rivers. The Pennsylvania canal, after traversing the whole state, and crossing the Alleghany on its great aqueduct, passes by a great tunnel under a hill near the city, and enters the Monongahela. Pittsburgh is connected with Lake Erie by the Ohio and Pennsylvania and the Cleveland and Pittsburgh railroads, and with Philadelphia by the Grand Trunk railroad.

The city contains an elegant courthouse, 165 feet long, 100 feet wide, and 148 feet from the ground to the top of the dome, which affords a delightful view of the populous neighborhood and rich picturesque surrounding region; also a prison, the Western University of Pennsylvania, finely seated on an adjacent elevation, and numerous churches, banks, hotels, and other prominent buildings. The Alleghany river affords a plentiful supply of water, which is distributed over the city by expensive and convenient water-works; and the bituminous coal of the adjoining hills yields gas for illuminating the town.

The manufactures embrace almost every article of domestic necessity and convenience. Machinery, cutlery, glass, cotton, cloth, pottery, paints, and drugs, are a few of the vast and innumerable variety produced.

The population in 1800, was 1,565; in 1810, 4,768; in 1820, 7,248; in 1830, 12,542; in 1840, 21,115; in 1850, 46,601.

PORTLAND, city, seat of justice of Cumberland co., Me., situated on a peninsula, at the southwest extremity of Casco bay, facing the Atlantic, from which it presents a beautiful view. It is 50 miles southwest of Augusta, 110 northeast of Boston, and 545 miles from Washington. The harbor is one of the best in the United States, being capacious and protected by the islands at its entrance, from the severity of the northeast storms, which prevail on this coast. A lighthouse, 72 feet high, built in 1790, still in good preservation, stands on Portland Head. On an eminence, in the northeast part of the city, is an observatory, 70 feet high, which affords a fine view of the neighboring harbor and islands, and the surrounding country, to the White mountains in New Hampshire. Railroads extend from this city to Vermont, via the valley of the Androscoggin. Augusta, Portsmouth, Boston, &c., and steamboats and packets ply to Boston and other ports, during the season of navigation. Cumberland and Oxford canal communicates with Sebago and Long ponds in the interior of the county. Portland has an extensive inland and coasting-trade, and exports large quantities of lumber, ice, and provisions, to the West Indies and elsewhere. The city is regularly laid out with wide streets, some of which are lined with beautiful shade trees and handsome dwellings. The hospitality and intelligence of the citizens, and the sea-breezes by which the city is fanned, render it a pleasant resort in the warm season. The population in 1790, was 2,240; in 1800, 3,677; in 1810, 7,169; in 1820, 8,581; in 1830, 12,601; in 1840, 15,218; in 1850, 20,815.

PORTSMOUTH, city, seat of justice, together with Exeter, of Rockingham co., N. H., occupies a peninsula on the south side of Piscataqua river, three miles from the Atlantic. It has one of the finest harbors in the world, being completely land-locked, defended by several forts, and having from 45 to 53 feet of water at low-tide. The town is built on ground gradually sloping toward the river, presenting a beautiful aspect from the ocean. It is well built and possesses much wealth, many of the houses being spacious and elegant. Its public buildings are an ornament to the city, consisting of the court-house, churches, banking houses, markets, and Athenaeum. A United States navy-yard, is situated on Continental, or Navy island, on the east side of the river, opposite the town. Ship-building and cotton-manufactures employ a large amount of capital. The Eastern railroad connects the place with Boston and Portland. Another railroad extends to Concord.

The population in 1810, was 6,934; in 1820, 7,327; in 1830, 8,082; in 1840, 7,687; in 1850, 9,738.

PORTSMOUTH, c. h., p. v., seat of justice, together with Norfolk, of Norfolk co., Va., 105 ma. S. E. of Richmond; from W. 213 ma. Watered by Elizabeth river.

 POUGHKEEPSIE, c. h., p. t., seat of justice of Dutchess co., N. Y., situated on the Hudson, at the head of ship-navigation. It lies on the east side of the river, 75 ma. N. of New York, 71 ma. S. of Albany; from W. 301 ma. Wappinger's creek bounds the town on the east, the Hudson on the west. From the latter river the village is concealed, being delightfully seated on an elevated plain, one mile eastward. At the landing there are a number of wharves, where steamboats and other vessels stop on their way between Albany and New York. Ascending by the road the steep bank, the village bursts upon the sight, presenting an interesting spectacle of industry and prosperity. It has the appearance of a city, with its compact buildings, regular streets, stores, churches, banks, and manufactories. Upon a neighboring elevation stands the Poughkeepsie collegiate school, a fine building in Grecian architecture; besides this there are an academy and other schools. Formerly whaling-vessels were owned in Poughkeepsie, and returned hither from their voyages. An expensive aqueduct supplies the village with water from neighboring springs. The Hudson River railroad passes through the place. The population, in 1810, was 4,670; in 1820, 5,726; in 1830, 7,222; in 1840, 10,006; in 1850, 13,944.

PROVIDENCE COUNTY, situated in the north part of Rhode Island. Area, 380 square miles. Face of the country, hilly; soil, of middling quality. Seat of justice, Providence. Pop. in 1810, 30,769; in 1820, 35,726; in 1830, 47,014; in 1840, 50,073; in 1850, 87,986.

PROVIDENCE, city, the seat of justice of Providence co., and capital, with Newport, of the state of Rhode Island; the second city in population of New England. Is situated at the head of Narraganset bay, on the Providence river, 42 miles southwest of Boston, and 173 miles northeast of New York. The older part of the city lies on the east side of the river, and though many of the streets partake of that irregularity, which seems peculiar to olden times, they contain many splendid stores, warehouses, dwellings, and public buildings. Ascending by an abrupt acclivity from the river, the streets and houses become more regular, many of the residences being of a superior style of elegance and structure, and affording delightful views of the harbor and the surrounding country. Crowning the elevation, are the buildings of Brown university, a flourishing institution. Crossing the river by one of the bridges, the west part of the city is laid out with more regularity upon ground less uneven. Here is the "Arcade," the largest and most important edifice in the city, built of granite, and adorned with a Grecian-Doric portico and columns. It is 225 feet long, 80 feet deep, and 72 feet high.

The name of the city, which it received from the Rev. Roger Williams, its founder, may serve to indicate its prosperity. Its location upon a spacious and convenient harbor, sufficient for a great number of the largest vessels, the manufacturing facilities of the surrounding districts, their facility of access to the city, and the enterprising spirit which has improved and adapted these advantages, are the sources of its increasing wealth and population. The Blackstone canal, beginning at Worcester, and winding through the productive regions and manufacturing towns of Massachusetts, brings large stores

to its market. On Pawtucket river, and other streams of Providence county, are extensive factories of cotton, wool, machinery, calico printing, and dyeing; and within the city are also various similar establishments. These are chiefly kept in operation by capitalists of Providence, and employ more than \$3,000,000 of capital. This city communicates by railroad with Boston, Worcester, and Stonington, and, in a great measure, has dispensed with the steamboat lines which traversed Long Island sound and the Atlantic to New York, Boston, and other places.

The population in 1810, was 10,071. in 1820, 11,767; in 1830, 16,833; in 1840, 23,171; in 1850, 44,512.

PROVIDENCE, p. t., Saratoga co., N. Y., 41 ms. N. W. of Albany; from W. 409 ms. Watered by Sacandaga river. Pop. 1,458.

RALEIGH, city, seat of justice of Wake co., and the capital of North Carolina, situated about six miles west of Neuse river, which is not generally navigable for ordinary vessels above Smithfield, 27 miles southeast of this place. Four broad avenues divide the town into as many squares, which are each again subdivided into four squares by streets of less width. At the junction of the main avenues, in the midst of an open park of 10

acres, stands the statehouse, a chaste and elegant structure of granite, 166 feet long, and 90 feet wide, surrounded by massy columns, and crowned by a beautiful dome. In 1831, the statehouse upon the same site was destroyed by fire, with a marble statue of Washington, by Canova. The Gaston and Raleigh railroad extends to the former place, 85 miles distant, where the Greenville and Roanoke connects it with Petersburg.

In 1810, the population was about 1,000; in 1820, 2,674; in 1830, 1,700; in 1840, 2,224; in 1850, 4,518.

READING, c. h., p. b., seat of justice of Berks co., Pa., 52 ms. E. of Harrisburgh; from W. 145 ms., situated on the east side of Schuylkill river, 57 miles northwest of Philadelphia, and 52 miles east of Harrisburgh, and has a delightful situation amid picturesque valleys, hills, and streams. In the regularity of its streets, the neatness of its houses, and the industry and good order of its inhabitants, it still retains the character stamped upon it by its founders, Thomas and Richard Penn, the sons of William Penn.

Reading is a town of considerable trade and manufactures, for which it has great natural and improved advantages. Tulpehocken creek and the Schuylkill furnish excellent water-power, by which numerous manufactories are kept in successful operation. Hats are the fabrics most extensively made.

Reading contains an imposing courthouse, several elegant churches, and market-houses, banks, an academy, and other public buildings. A neighboring spring supplies the town with an abundant supply of pure water, which is distributed by means of a reservoir and iron-pipes. Here the Schuylkill Navigation canal meets the Union canal, which terminates at Middletown, on the Susquehanna, and the Philadelphia and Reading railroad communicates with this town.

The population in 1810, was 3,463; in 1820, 4,332; in 1830, 5,850; in 1840, 8,410; in 1850, 15,790.

RHODE ISLAND, one of the United States, so called from its island of the same name, which was supposed to bear a resemblance to the isle of Rhodes, in the Mediterranean. It is the smallest state, as regards its territory, in the Union, and lies between 41° 22' and 42° 3' north latitude, and 71° 6' and 71° 38' west longitude from

Greenwich, and is bounded on the north and east by Massachusetts; south by the Atlantic; and west by Connecticut. Its superficial area is 1,340 square miles.

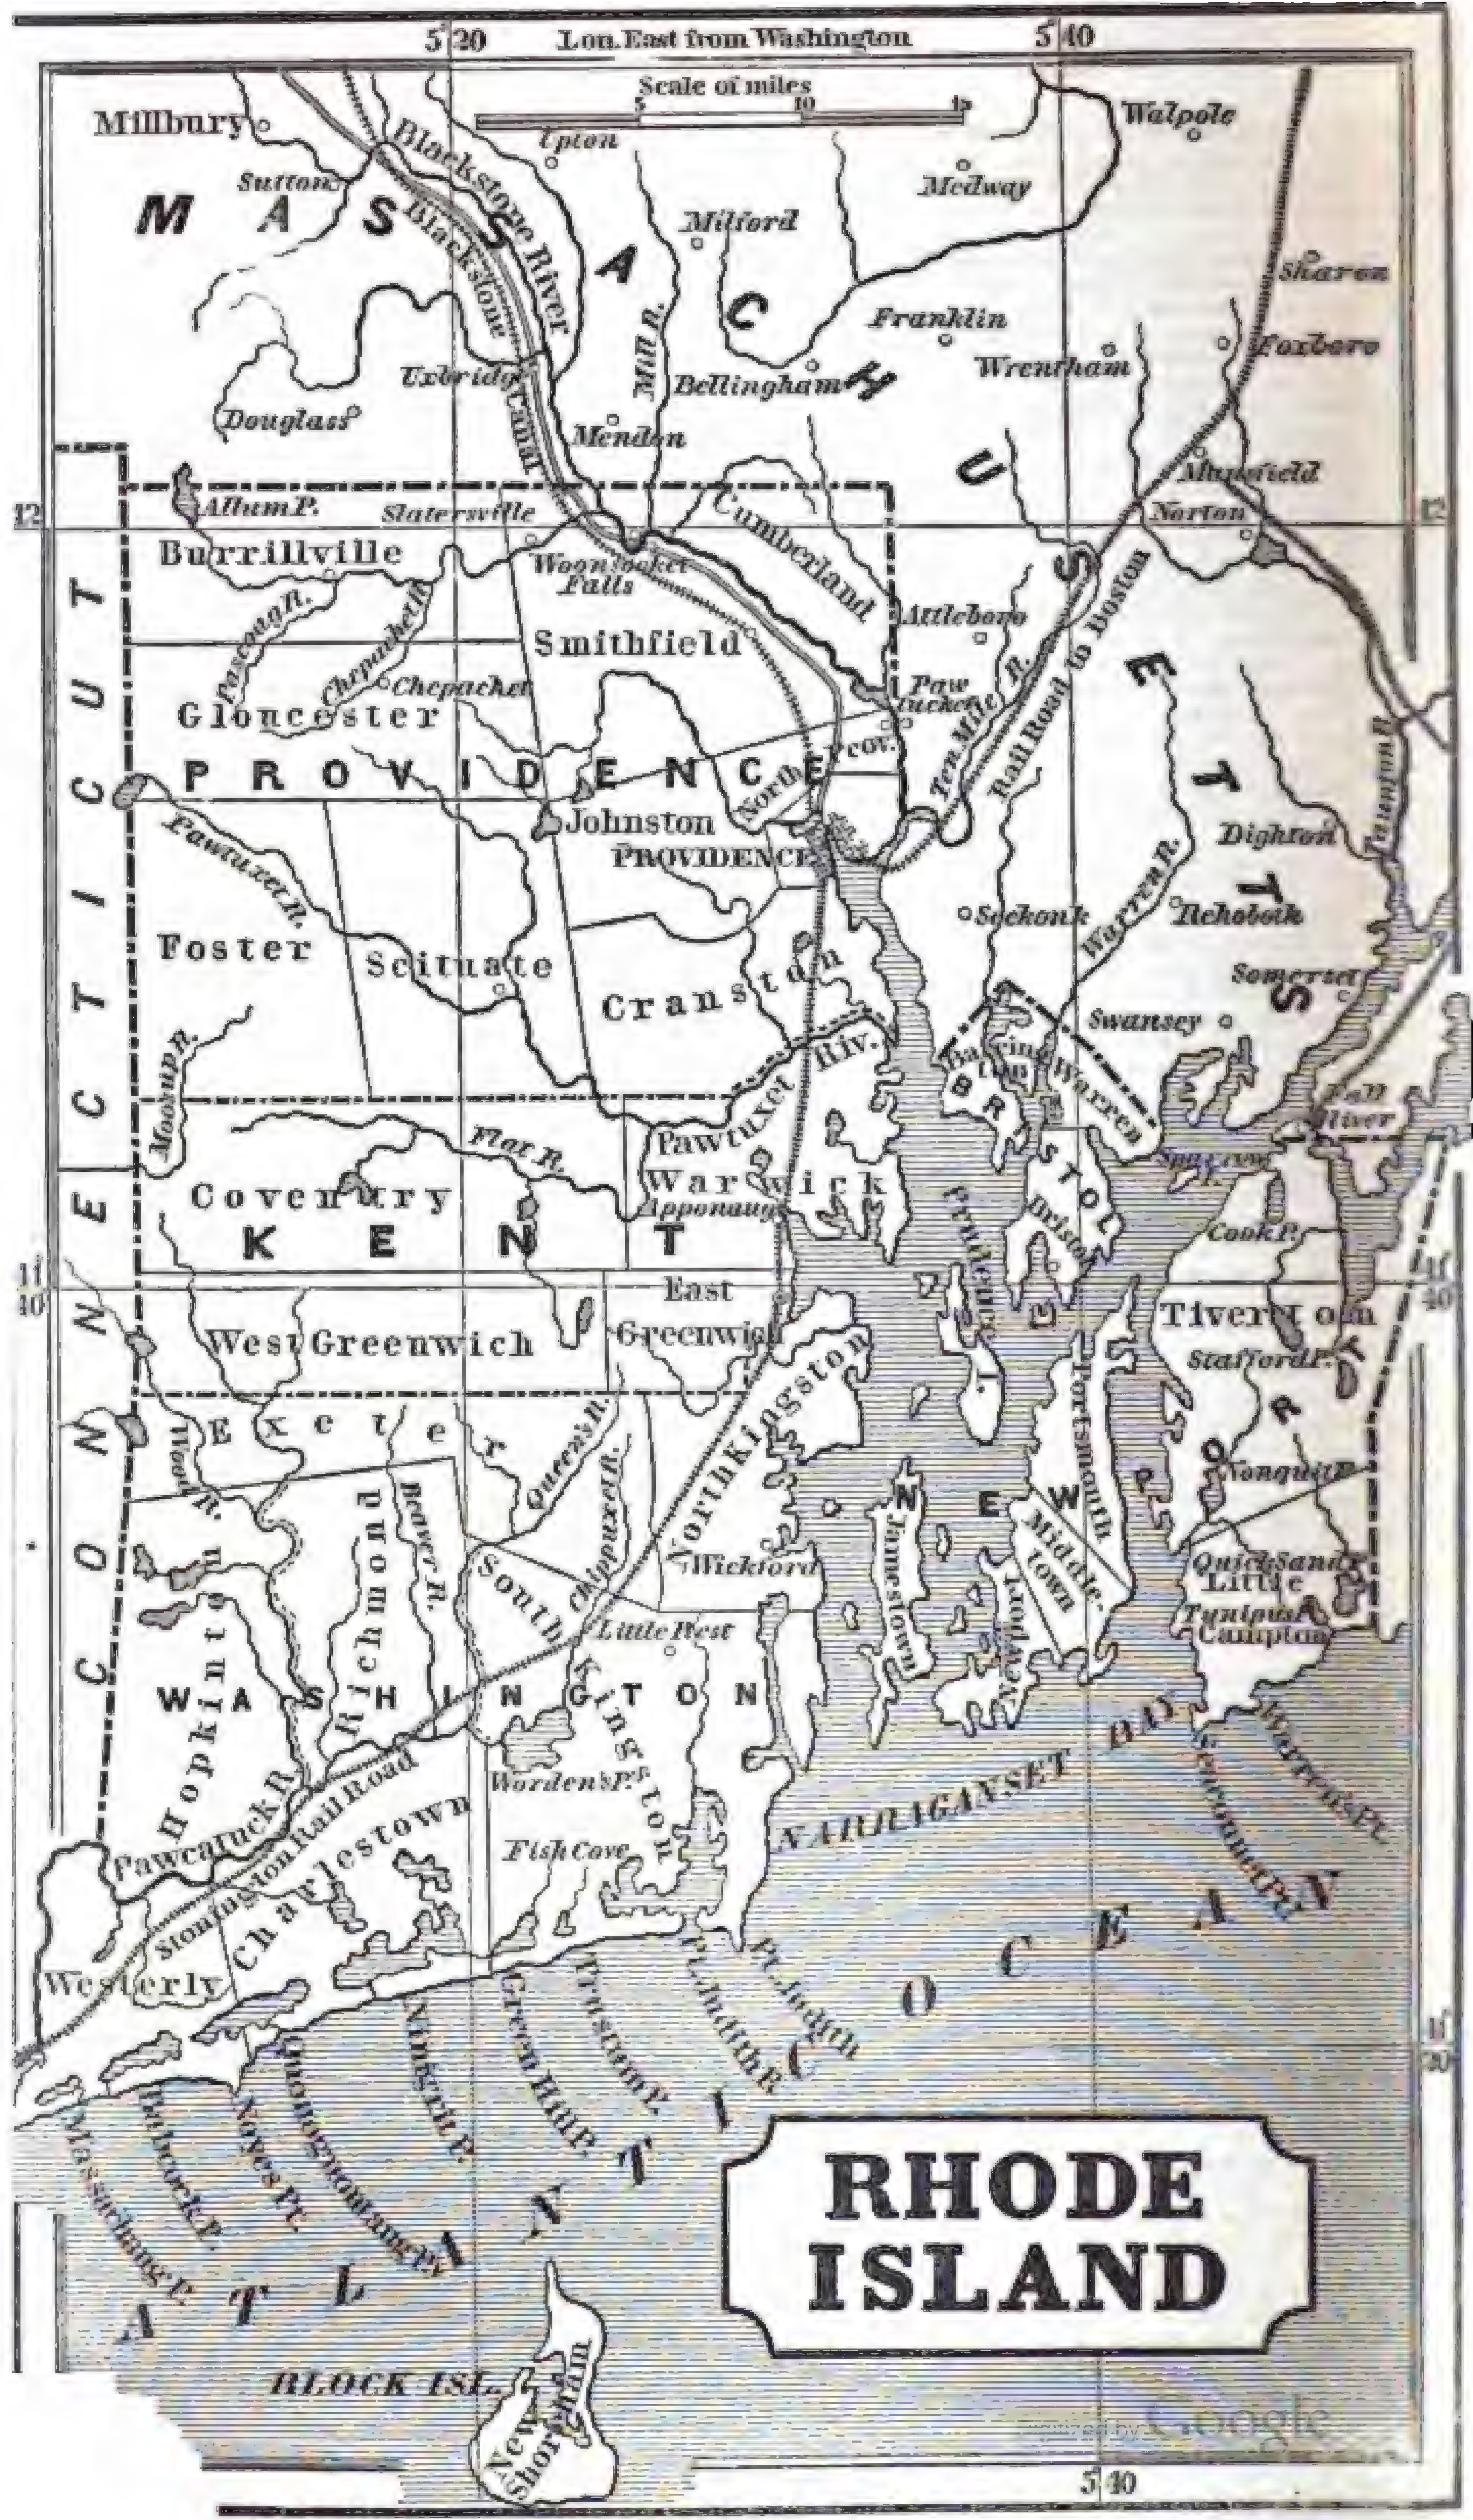

Physical Aspect.—The surface of this state is generally level, except in the northwest part, where it is rocky and hilly. There are many hills, however, as Mount Hope, in Bristol, Hopkins' hill, in West Greenwich, and Woonsocket hill, in Smithfield. The soil on the continental part is tolerably fertile, though thin and lean, and requires much labor to be tilled. But the lands near Narraganset bay, as well as those on the islands, have great fertility, and are in a high state of cultivation. The soil of this state is generally regarded as better adapted to grazing than tillage.

Rivers and Bays.—The principal rivers are the Pawtucket or Blackstone, Providence, Pawtuxet, Wood, and Pawcatuck. Narraganset is the only bay worthy of note, and nearly divides the state in two.

Islands.—Besides the isle from which this state takes its name, Block, Canonicut, Prudence, Patience, Hope, Dyer's, and Hog islands, are included within its territory.

Climate.—The climate is proverbially healthy; and on the islands, where the sea breezes have the effect, not only to mitigate the heat in summer, but to moderate the winter's cold. It is more temperate than in any of the other New England states. Newport has long been celebrated as a delightful summer residence, and is much resorted to by people from the south.

Productive Resources.—The principal products are

RHODE ISLAND

orses, mules, neat cattle, sheep, swine, poultry, eggs, butter, cheese, wool, hemp, flax, hay, lumber, wheat, rye, barley, oats, potatoes, and Indian corn. Anthracite coal is found and wrought to a small extent in this state.

Manufactures.—A greater proportion of the people of Rhode Island are employed in manufacturing than in any other state of the Union. The state abounds in excellent water-power, affording sites for manufactories, which are extensively improved. The principal manufactures are woollen and cotton; but it has several furnaces, tanneries, paper-mills, and other establishments.

Railroads and Canals.—The railroads are principally connecting links in the great line of travel from New England to the south. The three principal roads extend from Providence to Boston, Worcester, Mass., and Stonington, Conn., respectively, and have an aggregate length of about 150 miles. The Blackstone canal, from Providence to Worcester, lies partly within this state.

Commerce.—The direct foreign commerce of Rhode Island (owing to the greater eligibility of the ports of neighboring states) is small, compared with its population and industry. Its exports and imports in 1850 amounted to \$474,568. Shipping owned in the state amounts to about 28,000 tons.

Education.—Brown university, at Providence, is the only college in the state. There is an atheneum also at Providence, and academies and common schools are numerous. Provision is also made for the insane and blind.

Population.—In 1790, 69,110; in 1800, 69,122; in 1810, 77,031; in 1820, 83,059; in 1830, 97,199; in 1840, 108,830; in 1850, 147,544. Number of slaves in 1790, 952; in 1800, 381; in 1810, 103; in 1820, 48; in 1830, 17; in 1840, 5.

Government.—The legislative power is vested in a senate, and house of representatives; and the executive power in a governor, and lieutenant-governor; all chosen annually by the people, on the first Wednesday of April. The judicial powers are vested in a supreme court, consisting of a chief justice and three associates, who hold their offices at the discretion of the legislature; and in a court of common pleas for each county, consisting of a justice of the supreme court and two associates. The right of suffrage is vested in all male native citizens, who have resided in the state two years, and in the town where they propose to vote, six months; who have been registered seven days in the town clerk's office; have paid a tax, or done military duty, within the preceding year; and in all other male citizens (naturalized foreigners) who, in addition to the preceding qualifications, possess real estate in the town or city where offering to vote worth \$134 over all incumbrances, or which rents for \$7 per annum.

History.—The first permanent settlement by Europeans, within the present limits of Rhode Island, was made at Providence, in 1636, by Rev. Roger Williams, who had been banished from the Massachusetts colony for his peculiar religious opinions. This settlement was called the "Providence Plantation." The next settlement was made at Portsmouth, in the northern part of Rhode Island, in 1638, which, the year following, received the name of the "Rhode Island Plantation." In 1643, when the four colonies of Massachusetts entered into articles of confederation, under the title of the "United Colonies of New England," under the pretence that the Providence and Rhode Island plantations had no charter, and that their territory was claimed by Plymouth and Massachusetts, they were excluded from the confederacy. The year following, Roger Williams obtained a free charter from the British parliament, and incorporated the two plantations under one government, which continued in force till 1663, when a new charter was granted by Charles II. The latter is the venerable charter under which the people lived and prospered, until its constitution was amended, in 1842. The first general assembly was held at Portsmouth, in 1647, when the executive power was confided to a president and four assistants. The constitution of the United States was not adopted in Rhode Island until 1790, after it had received the assent of all the other states.

RICHMOND, city, seat of justice of Henrico co., and capital of Virginia, situated on the north side of James river, 150 miles from its entrance into Chesapeake bay, and 120 miles south of Washington. In trade, manufac-tures, and population, it is the principal city of the state. Directly above it, the river has a descent of about 80 feet in six miles, forming a natural barrier to navigation, which has been overcome by a canal around the falls, and extending 176 miles farther up the river. Through these channels, Richmond has become the entrepot of a fertile region, and receives large quantities of flour, tobacco, and coal. Vessels of 10 feet draught pass the bar, six miles below the city, and those of 14 feet navigate the river below this point. The location of the city is pleasant and healthful, and is situated on two hills, though not densely built, and in the valley between them runs Shockoe creek, a rapid stream. Many beautiful mansions are scattered on these elevations, and on the level top of the westerly one, stands the statehouse, a chaste and beautiful building, in the centre of an open square. Near this is the city-hall, a large and elegant edifice of Grecian architecture. In 1811, a theatre was burned on the site where an episcopal church now stands, and a large number of respectable citizens, including the governor of the state, perished. To commemorate this sad event, the Monumental church was erected on the spot where it took place. Near the city is a penitentiary, extending with its grounds over an area of several acres.

The manufactures of Richmond are varied and valuable, the neighboring streams affording fine water-power which has been extensively supplied. Here are cotton factories, flouring mills, nail and iron works, and numerous other prosperous establishments.

Besides the canal before noticed, the city is connected with Norfolk, New York, and other points, by steam-boats and sailing-packets. Two bridges extend over James river to Manchester, a flourishing suburb of Richmond, upon one of which the Washington and Wilmington railroad enters the city, whence it traverses Virginia and North Carolina. The Virginia Central railroad begins at Richmond, and penetrates the interior of the state.

The water-works, by which Richmond is supplied, raise the water, by hydraulic power, into three reservoirs, each containing a million of gallons, and from these lead off to all parts of the city.

The spot on which this large and fine city stands was first visited by white men in 1609, when "Master West" penetrated to the falls in search of provisions for the young colony at Jamestown, but found nothing edible except acorns. Richmond was founded in 1742, and made the capital of the state in 1780, since which it has been steadily increasing.

The population in 1800, was 5,537; in 1810, 9,735; in 1820, 12,046; in 1830, 16,060; in 1840, 20,153; in 1850, 35,482.

ROCHESTER, p. t., Plymouth co., Mass., 54 ma. s. e. of Boston; from W. 441 ma. Watered by Buzzard's bay, and Mattapoiet and Sipican rivers. Pop. 3,808.

ROCHESTER, city, seat of justice of Monroe co., N. Y., situated on both sides of Genesee river, 7 miles from its entrance into Lake Ontario, 73 miles northeasterly from Buffalo, and 220 miles northwest of Albany. Three bridges, and the magnificent aqueduct of the Erie canal, span the river from the west to the east part of the city. The public buildings are generally substantial and imposing; but the most interesting structures are the flour-mills along the rapids and falls of Genesee river, which here descend 270 feet. Here the vast stores of wheat produced in the Genesee valley and the surrounding country, as well as the western states, are ground and prepared for market. To its vast water-power and the Erie canal, Rochester owes its prosperity and surprising growth. Thirty years ago, the site of the city was a marshy, unhealthy wilderness; now, it is populous with men, and active with industry. The population in 1820 was 1,502; in 1830, 9,269; in 1840, 20,191; in 1850, 36,403.

ROCHESTER, p. t., Ulster co., N. Y., 74 ma. s. of Albany; from W. 300 ma. Watered by Rondout creek.

ROCHESTER, p. v., Salem township, Warren co., O., 75 ma. s. w. of Columbus; from W. 460 ma. Watered by Little Miami river.

SACRAMENTO COUNTY, situated in the central part of California, with Sacramento river on the west.

Area — square miles. Face of the country, level; soil rich. Seat of justice, Sacramento city. Pop. in 1850, 12,589.

SACRAMENTO, city, seat of justice of Sacramento co., Cal., 125 miles from San Francisco, on the east bank of Sacramento river, is the second city, in point of location and importance, in California. It is the principal depot for the greater part of the northern mining district. This city is destined to be of great importance, as it is the highest point to which steamers and other vessels can ascend at low water. A good and substantial levee has been constructed around the city, to protect it from the overflow of the river, during the annual and occasional freshets. The city is rapidly increasing, and must become a large commercial town, from the fact of its being a central point in the northern section of the state. The population in 1852, was about 8,000.

SAINT LOUIS COUNTY, situated on the easterly boundary of Missouri, with Mississippi river on the

east, the Missouri on the northwest, and the Maramee on the south. Area, 550 square miles. Face of the country, even; soil, fertile. Seat of justice, Saint Louis. Pop. in 1810, 6,567; in 1820, 10,049; in 1830, 14,125; in 1840, 35,079; in 1850, 104,978.

SAINT LOUIS, city, seat of justice of St. Louis county, Missouri, situated on the west bank of Mississippi river, 20 miles below the junction of the Missouri, 180 miles above the Ohio, 1,150 miles from New Orleans, and 856 miles from Washington. It is built upon two elevations, the lower twenty feet above the river, and the higher sixty feet. The terrace, as it may be styled, and the water, affords room for several business streets, some of which are lined with rows of spacious and imposing warehouses. Above, are many fine sites for residence and for public buildings, churches, asylums, schools, banks, and various other prominent edifices. The thickly-peopled part of the city extends several miles along the river, and about a mile westward. The whole area is much larger, including 36 square miles or more, and is filling up with unexampled rapidity.

The commercial position and advantages are remarkable, as its growing prosperity conclusively testifies. Few towns on the Mississippi have so favorable a position with respect to that river, while it is the entrepot of a vast trade from the valleys of Ohio and Missouri rivers. It is thus identified in progress with an extensive section of the west, to which it holds an important relation. The surrounding land is fertile, populous, and well cultivated, and of course contributes largely to the maintenance and trade of the city. The harbor is sufficient for steamboats of the largest class, many hundreds of which stop at this point every year.

The manufactures of St. Louis are also extensive and varied, embracing articles of different descriptions, to the amount of many hundred thousand dollars.

The city is lighted with gas, and supplied with water from the river, elevated into reservoirs by steam-engines, and thence distributed by iron pipes. It is the seat of St. Louis university, and contains other scientific and literary institutions of different grades.

The population in 1810 was 1,600; in 1820, 4,598; in 1830, 5,852; in 1840, 16,469; in 1850, 77,864.

SAINT PAUL, p. v., seat of justice of Ramsey co., and capital of Minnesota, occupies a plateau, at the head of the bold bank of the Mississippi, on its north side, eight miles below the falls of St. Anthony, the head of navigation. The central position of the town is level, terminating on the bluff, eighty feet high, which recedes from the river at the upper and lower end of the village, forming two landings. Though yet in embryo, it bids fair to become an important point on the westward stream of civilization. Pop. in 1850, 1,135.

SAINT TAMMANY PARISH, situated on the east boundary of Louisiana, with Pearl river on the east, and Lake Ponchartrain on the south. Area, 972 square miles. Face of the country undulating, subsiding toward the south into a plain; soil, generally sterile. Seat of justice, Covington. Pop. in 1820, 1,723; in 1830, 2,864; in 1840, 4,598; in 1850, 6,364.

SAINT TAMMANY'S, p. o., Mecklenburgh co., Va., 97 ms. s. w. of Richmond; from W. 213 ms.

SAINT THOMAS, p. t., Franklin co., Pa., 53 ms. s. w. of Harrisburgh; from W. 98 ms. Watered by Back creek and tributaries. Pop. 1,957.

SALEM COUNTY, situated at the southwesterly corner of New Jersey, with Delaware bay and Delaware river on the southwest and northwest. Area, 320 square miles. Face of the country, level; soil, sandy but productive. Seat of justice, Salem. Pop. in 1810, 12,761; in 1820, 14,022; in 1830, 14,155; in 1840, 16,024; in 1850, 19,467.

SALEM, city, seat of justice, together with Ipswich and Newburyport, of Essex co., Mass., 14 miles northeast of Boston, and 454 miles from Washington. The tongue of land on which it is situated is nearly surrounded by water, and comprises the oldest and most irregular part of the town. Two bridges over each inlet of the sea connect this with the more modern parts. The position of the city is low, and its harbor shallow; but here, as elsewhere, obstacles seem to have stimulated rather than prevented effort. Next to Plymouth and Weymouth, Salem is the oldest town in Massachusetts, and from an early period it has been distinguished for the extent of its maritime operations. Its ships and sailors were active in the Revolution, and since that period it has been celebrated for its East India trade. At present, though other towns more favorably situated have outstripped it in commerce and population, its vessels are as numerous as ever, and visit every quarter of the globe. Several millions of dollars in capital are invested in the manufacture of machinery, useful and precious metals, &c. In the centre of the city is a park, or "Common," of about nine acres. The streets are not very regular, but some of the houses are handsome. The most noted public buildings are the Athenaeum, East India museum, city-hall, courthouse, hospital, customhouse, jail, and about twenty churches of various denominations. The population in 1790 was 7,921; in 1800, 9,457; in 1810, 12,613; in 1820, 12,721; in 1830, 13,886; in 1840, 15,082; in 1850, 20,264.

SANDUSKY COUNTY, situated in the north part of Ohio, with Sandusky bay on the northeast, and traversed by Sandusky river. Area, 320 square miles. Face of the country, low and level. Seat of justice, Fremont. Pop. in 1820, 852; in 1830, 2,851; in 1840, 10,182; in 1850, 14,305.

SANDUSKY, p. o., Freedom township, Cattaraugus co., N. Y., 272 ms. W. of Albany; from W. 343 ms.

SANDUSKY, seat of justice of Erie co., O., an interesting, pleasant, and thriving village, and one of the principal ports of entry on Lake Erie, is finely located on the inner shore of Sandusky bay, 60 ms. W. of Cleveland, 110 miles north of Columbus, and 414 miles from Washington. Few western towns combine so pleasant a situation with so many sources of prosperity. On a beautiful site, overlooking the whole bay, its entrance, and lake beyond, the harbor, dotted with sails and steamboats, moving in different directions, the town and its environs form a pleasing picture of industry and comfort. A rich quarry of fine limestone, furnishes a foundation for the village and material for its buildings. Of these, a number are conspicuous for beauty and elegance. Besides the numerous steamboats and other vessels which visit Sandusky city from different points on the lake, it is the terminus of railroads from Cincinnati, Columbus, and intermediate towns. The population in 1830, was 593; in 1840, 1,200; in 1850, 5,087.

SAN FRANCISCO COUNTY, situated on the westerly boundary of California, with the Pacific ocean on the west, and San Francisco bay on the northeast. Area, — square miles. Seat of justice, San Francisco. Pop. in 1852, 36,151.

SAN FRANCISCO, the "Empire city" of the Pacific, and seat of justice of San Francisco co., Cal., stands on a narrow neck of land between the bay of San Francisco and the ocean, fronting eastward on the bay, and having the ocean five miles on the west. The bay is safe and commodious, being capable of holding the combined navies of the world. It extends southward some fifty miles, parallel with the sea, from which it is separated by a narrow strip of land, varying from five to twenty miles in width. The city of San Francisco is on the extreme point of this promontory. Its site is handsome and commanding, being on an inclined plane half a mile in extent from the water's edge to the hills in the rear. Two points of land—Clark's point on the north, and Rincon point on the south—one mile apart, project into the bay, forming a crescent between them, which is the water-front of the city, and which has already been filled in and covered with buildings to the extent of half a mile. Those points, and the lofty hills north and west, upon which the city is rapidly climbing, afford a most extensive and picturesque view of the surrounding country. There are scarcely to be found more charming and diversified prospects than are presented from these heights.

For growing importance, commercial advantages, and the enterprise of its citizens, San Francisco deserves the rank of one of the great cities of the Union. Although it has been repeatedly destroyed by fire, it has each time risen, phoenix-like, from its own ashes, with new beauty and with greater splendor than before. It contains a large number of elegant brick fire-proof stores and banking-houses, and the streets are paved with heavy timbers and planks, which will soon give place to more durable materials. There are several daily lines of steamers to Sacramento, Marysville, Stockton, San Joaquin city, and other points on the rivers,

and in the northern and southern mines; while ocean-streamers ply from San Francisco to Panama and San Juan del Sur, the port of Nicaragua. Vessels from the Atlantic coast, and all parts of the world, constantly arrive or depart. The population in 1847 was 375; in 1852, 34,876.

SAN GABRIEL, p. o., Williamson co., Tex.

SANGAMON or SANGAMO COUNTY, situated in the central part of Illinois, and traversed by Sangamon river. Area, 900 square miles. Face of the country, even; soil, rich. Seat of justice, Springfield, which is also the state capital. Pop. in 1830, 12,960; in 1840, 14,716; in 1850, 19,228.

SANGERFIELD, p. t., Oneida co., N. Y., 88 ms. N. W. of Albany; from W. 372 ms. Watered by Chenango river and Oriskany creek. Pop. 2,371.

SANTA FE COUNTY, situated in the northern part of the territory of New Mexico, on the western side of the Rocky mountains. Area, — square miles. Soil, sandy and sterile. Watered by the Rio Grande del Norte. Seat of justice, city of Santa Fé. Pop. in 1850, 7,713.

SANTA FE, city, seat of justice of Santa Fé co., New Mexico, is situated east of the Rio del Norte, about 600

miles from the gulf of Mexico. It has long been an important rendezvous of traders from other parts of the Union and from Mexico. Between 1834 and 1841, the annual value of the trade passing through this place was from \$2,000,000 to \$3,000,000. The hostilities between the United States and Mexico checked this prosperity; but the annexation of New Mexico, and the rapid settlement of California, are sources of permanent advantage, of which the influence has been already felt. The annoyances from hostile Indians, to which traders have always been more or less exposed, are the principal obstacles to its rapid increase. The population is about 5,000.

SACRAMENTO COUNTY, situated in the central part of California, with Sacramento river on the west.

Area — square miles. Face of the country, level; soil rich. Seat of justice, Sacramento city. Pop. in 1850, 12,589.

SACRAMENTO, city, seat of justice of Sacramento co., Cal., 125 miles from San Francisco, on the east bank of Sacramento river, is the second city, in point of location and importance, in California. It is the principal depot for the greater part of the northern mining district. This city is destined to be of great importance, as it is the highest point to which steamers and other vessels can ascend at low water. A good and substantial levee has been constructed around the city, to protect it from the overflow of the river, during the annual and occasional freshets. The city is rapidly increasing, and must become a large commercial town, from the fact of its being a central point in the northern section of the state. The population in 1850, was about 8,000.

SAINT LEONARD'S, p. v., Calvert co., Md., 56 ma. S. of Annapolis; from W. 86 ma.

SAINT LOUIS COUNTY, situated on the easterly boundary of Missouri, with Mississippi river on the

east, the Missouri on the northwest, and the Marmet on the south. Area, 550 square miles. Face of the country, even; soil, fertile. Seat of justice, Saint Louis. Pop. in 1810, 6,567; in 1820, 10,049; in 1830, 14,125; in 1840, 35,079; in 1850, 104,978.

SAINT LOUIS, city, seat of justice of St. Louis county, Missouri, situated on the west bank of Mississippi river, 20 miles below the junction of the Missouri, 180 miles above the Ohio, 1,150 miles from New Orleans, and 356 miles from Washington. It is built upon two elevations, the lower twenty feet above the river, and the higher sixty feet. The terrace, as it may be styled, and the water, affords room for several business streets, some of which are lined with rows of spacious and imposing warehouses. Above, are many fine sites for residences and for public buildings, churches, asylums, schools, banks, and various other prominent edifices. The thickly-peopled part of the city extends several miles along the river, and about a mile westward. The whole area is much larger, including 36 square miles or more, and is filling up with unexampled rapidity.

The commercial position and advantages are remarkable, as its growing prosperity conclusively testifies. Few towns on the Mississippi have so favorable a position with respect to that river, while it is the entrepot of a vast trade from the valleys of Ohio and Missouri rivers. It is thus identified in progress with an extensive section of the west, to which it holds an important relation. The surrounding land is fertile, populous, and well cultivated, and of course contributes largely to the maintenance and trade of the city. The harbor is sufficient for steamboats of the largest class, many hundreds of which stop at this point every year.

The manufactures of St. Louis are also extensive and varied, embracing articles of different descriptions, to the amount of many hundred thousand dollars.

The city is lighted with gas, and supplied with water from the river, elevated into reservoirs by steam-engines, and thence distributed by iron pipes. It is the seat of St. Louis university, and contains other scientific and literary institutions of different grades.

The population in 1810 was 1,600; in 1820, 4,598; in 1830, 5,852; in 1840, 16,469; in 1850, 77,864.

SAINT LOUISVILLE, p. o., Licking co., O.

SAINT MARIE, p. v., Jasper co., Ill., 139 ma. S. E. of Springfield; from W. 716 ma. Pop. 420.

SAINT MARK'S, p. v., Leon co., Flor., 20 ma. S. of Tallahassee; from W. 816 ma. Situated near the union of St. Mark's, Wakully, and Apalachee rivers.

SAINT MARTIN'S PARISH, situated toward the south part of Louisiana, with Chetimaches lake on the south. Area, 850 square miles. Face of the country, flat; soil, where arable, rich. Seat of justice, St. Martinsville. Pop. in 1830, 7,204; in 1840, 8,674; in 1850, 11,765.

SAINT MARTIN'S, p. v., Worcester co., Md., 131 ma. S. E. of Annapolis; from W. 171 ma.

SAINT MARTINSVILLE, c. h., p. v., seat of justice of St. Martin's parish, La., 178 ma. W. of New Orleans; from W. 1,281 ma. Watered by Bayou Tache, at the head of steam-navigation.

SAINT MARY'S PARISH, situated on the south boundary of Louisiana, with the gulf of Mexico on the south, and Chetimaches lake on the northeast. Area, 870 square miles. Seat of justice, Franklin. Pop. in 1830, 6,442; in 1840, 8,950; in 1850, 13,700.

SAINT MARY'S COUNTY, situated in the south part of Maryland, with Chesapeake bay and Patuxent river on the northeast, and the Potomac on the southwest. Area, 200 square miles. Seat of justice, Leonardtown. Pop. in 1810, 12,794; in 1820, 12,974; in 1830, 13,459; in 1840, 13,224; in 1850, 13,698.

SAINT PAUL, p. o., Greene co., Mo.

SAINT PAUL, p. v., seat of justice of Ramsey co., and capital of Minnesota, occupies a plateau, at the head of the bold bank of the Mississippi, on its north side, eight miles below the falls of St. Anthony, the head of navigation. The central position of the town is level, terminating on the bluff, eighty feet high, which recedes from the river at the upper and lower end of the village, forming two landings. Though yet in embryo, it bids fair to become an important point on the westward stream of civilization. Pop. in 1850, 1,135.

SALEM COUNTY, situated at the southwesterly corner of New Jersey, with Delaware bay and Delaware river on the southwest and northwest. Area, 320 square miles. Face of the country, level; soil, sandy but productive. Seat of justice, Salem. Pop. in 1810, 12,761; in 1820, 14,022; in 1830, 14,155; in 1840, 16,024; in 1850, 19,467.

SALEM, city, seat of justice, together with Ipswich and Newburyport, of Essex co., Mass., 14 miles northeast of Boston, and 454 miles from Washington. The tongue of land on which it is situated is nearly surrounded by water, and comprises the oldest and most irregular part of the town. Two bridges over each inlet of the sea connect this with the more modern parts. The position of the city is low, and its harbor shallow; but here, as elsewhere, obstacles seem to have stimulated rather than prevented effort. Next to Plymouth and Weymouth, Salem is the oldest town in Massachusetts, and from an early period it has been distinguished for the extent of its maritime operations. Its ships and sailors were active in the Revolution, and since that period it has been celebrated for its East India trade. At present, though other towns more favorably situated have outstripped it in commerce and population, its vessels are as numerous as ever, and visit every quarter of the globe. Several millions of dollars in capital are invested in the manufacture of machinery, useful and precious metals, &c. In the centre of the city is a park, or "Common," of about nine acres. The streets are not very regular, but some of the houses are handsome. The most noted public buildings are the Athenæum, East India museum, city-hall, courthouse, hospital, customhouse, jail, and about twenty churches of various denominations. The population in 1790 was 7,921; in 1800, 9,457; in 1810, 12,613; in 1820, 12,721; in 1830, 13,886; in 1840, 15,082; in 1850, 20,264.

October. The chancellor and judges of the supreme court are chosen by the joint ballot of both houses of the assembly, and hold their offices during good behavior. Every free white male citizen, 21 years of age, who has resided in the state two years immediately preceding the election, and who is possessed of a freehold of 50 acres of land, or a town-lot, six months before the election; or not possessing this freehold, who shall have resided in the election district in which he offers to vote six months before the election, and have paid a tax of three shillings sterling to the support of the government, has the right of suffrage.

SOUTH CAROLINA, one of the United States, lies between 32° 2' and 35° 10' north latitude, and 78° 24' and 83° 30' west longitude from Greenwich; bounded n. by North Carolina, s. e. by the Atlantic, and westerly by Georgia, from which it is separated by Savannah river. Its superficial area is 28,000 square miles.

Physical Aspect.—This state, like North Carolina and Georgia, presents a great diversity of surface, as well as of soil and climate, and may also be physically divided into three zones. The first bordering on the Atlantic, is that of sea-sand alluvion, below the lower falls of the rivers, about 60 miles wide, and in most places penetrated by the tide. The second commences along or near the lower falls and primitive ledge. The sea-sand zone is very nearly a dead plain, but at its interior margin hills begin to appear, springs of water become plentiful, the soil melliorates, and the whole face of nature assumes an agreeable diversity of surface. The third, or what may be called the mountain zone, though but little of it is really mountainous, comprises the north-western part of the state, and lies based on the Blue Ridge chain. The first of these zones, which includes the "Sea islands," is covered with extensive tracts of pine "barrens," open plains without wood, savannas, swamps, and salt marsh, presenting the most fertile and the most sterile extremes of soil. The second zone displays, amid a series of hills, bold, swelling, and varied in their form, a rapid succession of rich cotton lands, meadows, orchards, and fields of small grain, interluded by extensive forests, barrens, and swamps. As we approach the mountainous zone, we are gratified by the pleasant alternation of hill and dale; the lively verdure of the hills is contrasted with the deeper tints of the forests which decorates their sides; and in the valleys, broad rivers roll their waters through the varied beauties of the luxuriant and cultivated fields. From these delightful regions the surface still continues to rise, till we reach the western limit of the state.

Mountains.—The Blue Ridge, or Appalachian chain, traverses this state in its northwest part, of which Table mountain is the most conspicuous. The other mountains are Olenoy, Oconee, Paris, Glassy's, Hog-Back, and King's.

Rivers, Bays, and Sounds.—The principal rivers are, the Savannah, Pedee, Black, Santee, Cooper, Ashley, Stono, Edisto, Ashepos, Combahee, Coosaw, Broad, and Waccamaw. Besides Bull's and Winyaw bays, this state contains numerous estuaries, and sounds, the principal of which are, Port Royal and Georgetown entrances, and Tyree and St. Helena sounds.

Islands.—The coast is bordered by a chain of fine islands, the most important of which are, Port Royal, St. Helena, Edisto, Ladu's, Trench's, Hunting, and Racoon keys.

Climate.—The climate along the seaboard is moist, very changeable, and, during summer and autumn, is extremely unhealthy. The middle region, particularly in winter and spring, is regarded as the most healthy part of the state. In short, all the districts of the upper country enjoy as salubrious a climate as is found in the Union.

Productive Resources.—The principal products of

this state are, horses, mules, neat cattle, sheep, swine, poultry, sugar, wax, hay, lumber, pitch, tar, turpentine, cotton, wool, silk, tobacco, rice, wheat, rye, barley, oats, sweet potatoes, and Indian corn. Of the mineral and fossil resources of the state, gold is found in considerable abundance, but the "diggings" are less numerous than in Georgia and North Carolina. Marble, limestone, granite, oil and soap-stone, iron and lead ores, talc, asbestos, plumbago, pyrites, ochres used for painting, potter's clay, and fullers' earth, also occur in greater or less abundance.

Manufactures.—The manufactures of South Carolina are limited in extent. There are about 20 cotton-mills, which consume about 4,000,000 pounds of cotton annually. There were, in 1850, over 1,400 manufacturing establishments of all kinds in the state.

Railroads and Canals.—The aggregate length of railroads in operation in the state is about 300 miles, and about the same amount in process of construction. The longest canal in the state is the Santee, from Charleston to Santee river, 22 miles. There are several other shorter ones, amounting in the aggregate to about 30 miles.

Commerce.—The foreign commerce of South Carolina is quite large, its exports and imports amounting to about \$14,000,000 annually. The shipping owned in the state is about 40,000 tons. Charleston is the principal port, and enjoys about nine tenths of the commerce.

Education.—There are three colleges in South Carolina. The Charleston college, founded in 1785; the college of South Carolina, founded in 1804; and the Erskine college, in Abbeville district. There are three theological seminaries in the state. There is also a medical college at Charleston. There are about 1,000 public schools, and 200 academies, in various parts of the state.

Population.—In 1790, 249,073; in 1800, 345,591; in 1810, 415,715; in 1820, 502,741; in 1830, 581,185; in 1840, 594,398; in 1850, 668,507. Number of slaves in 1790, 107,094; in 1800, 146,151; in 1810, 196,365; in 1820, 258,475; in 1830, 315,401; in 1840, 327,038; in 1850, 384,984.

History.—The state of South Carolina embraces a portion of the ancient territory of Florida, as first discovered by Ponce de Leon, in 1512; as well as a part of Carolina, as colonized by Coligni with Huguenots, in 1562-'65; or a part of Virginia, as granted to Sir Walter Raleigh, in 1584. In about the year 1630, another grant was made to Sir Robert Heath, of the tract lying between 30° and 36° north latitude, which was erected into a province, under the name of "Carolina." As no settlements were made under this grant, the charter was declared void. In 1663, the province of Carolina was granted, by Charles II. to Lord Clarendon and seven others. Two years later, the grant was enlarged, so as to comprise all the territory between 31° and 36½° north latitude, extending westward from sea to sea. In 1670, a small body of English emigrants, under William Sayle, commenced the settlement of Old Charleston, on the south side of Ashley river, which they called "Carteret County Colony," in honor of one of the proprietors. From this place they removed, in 1678, to the present site of Charleston. In 1720, the proprietary government was thrown off, and that of the crown established. In 1729, after much controversy and difficulty between the proprietors and the crown, seven out of the eight sold all their claims to the soil and rents in both Carolinas to the king, for £17,500, and the provinces then became royal governments, entirely unconnected, under which they remained until the Revolution. South Carolina early resisted British oppression, and was one of the confederacy in 1776. It ratified the constitution of the United States, and was admitted into the Union as a sovereign state, in 1788. Mottoes of the seal *Animus ophibetque parati*: "Ever ready in spirit and achievements." Reverse—*Dum spiro spero*: "While I live I hope."

Government.—The governor is elected for two years, by a joint vote of both houses of the assembly. After having served one term, he is ineligible for the next four years. A lieutenant-governor is chosen in the same manner, and for the same period. The senate consists of 45 members, elected by districts for four years. The house of representatives consists of 124 members, apportioned among the several districts, according to the number of white inhabitants and taxation, and are elected for two years. The representatives and half the senators are chosen every second year, in

SOUTH CAROLINA, one of the United States, lies between 32° 2' and 35° 10' north latitude, and 78° 24' and 83° 30' west longitude from Greenwich; bounded n. by North Carolina, s. e. by the Atlantic, and westerly by Georgia, from which it is separated by Savannah river. Its superficial area is 28,000 square miles.

Physical Aspect.—This state, like North Carolina and Georgia, presents a great diversity of surface, as well as of soil and climate, and may also be physically divided into three zones. The first bordering on the Atlantic, is that of sea-sand alluvion, below the lower falls of the rivers, about 60 miles wide, and in most places penetrated by the tide. The second commences along or near the lower falls and primitive ledge. The sea-sand zone is very nearly a dead plain, but at its interior margin hills begin to appear, springs of water become plentiful, the soil melliorates, and the whole face of nature assumes an agreeable diversity of surface. The third, or what may be called the mountain zone, though but little of it is really mountainous, comprises the north-western part of the state, and lies based on the Blue Ridge chain. The first of these zones, which includes the "Sea islands," is covered with extensive tracts of pine "barrens," open plains without wood, savannas, swamps, and salt marsh, presenting the most fertile and the most sterile extremes of soil. The second zone displays, amid a series of hills, bold, swelling, and varied in their form, a rapid succession of rich cotton lands, meadows, orchards, and fields of small grain, interluded by extensive forests, barrens, and swamps. As we approach the mountainous zone, we are gratified by the pleasant alternation of hill and dale; the lively verdure of the hills is contrasted with the deeper tints of the forests which decorates their sides; and in the valleys, broad rivers roll their waters through the varied beauties of the luxuriant and cultivated fields. From these delightful regions the surface still continues to rise, till we reach the western limit of the state.

Mountains.—The Blue Ridge, or Appalachian chain, traverses this state in its northwest part, of which Table mountain is the most conspicuous. The other mountains are Olenoy, Oconee, Paris, Glassy's, Hog-Back, and King's.

Rivers, Bays, and Sounds.—The principal rivers are, the Savannah, Pedee, Black, Santee, Cooper, Ashley, Stono, Edisto, Ashepos, Combahee, Coosaw, Broad, and Waccamaw. Besides Bull's and Winyaw bays, this state contains numerous estuaries, and sounds, the principal of which are, Port Royal and Georgetown entrances, and Tyree and St. Helena sounds.

Islands.—The coast is bordered by a chain of fine islands, the most important of which are, Port Royal, St. Helena, Edisto, Ladu's, Trench's, Hunting, and Racoon keys.

Climate.—The climate along the seaboard is moist, very changeable, and, during summer and autumn, is extremely unhealthy. The middle region, particularly in winter and spring, is regarded as the most healthy part of the state. In short, all the districts of the upper country enjoy as salubrious a climate as is found in the Union.

Productive Resources.—The principal products of

this state are, horses, mules, neat cattle, sheep, swine, poultry, sugar, wax, hay, lumber, pitch, tar, turpentine, cotton, wool, silk, tobacco, rice, wheat, rye, barley, oats, sweet potatoes, and Indian corn. Of the mineral and fossil resources of the state, gold is found in considerable abundance, but the "diggings" are less numerous than in Georgia and North Carolina. Marble, limestone, granite, oil and soap-stone, iron and lead ores, talc, asbestos, plumbago, pyrites, ochres used for painting, potter's clay, and fullers' earth, also occur in greater or less abundance.

Manufactures.—The manufactures of South Carolina are limited in extent. There are about 20 cotton-mills, which consume about 4,000,000 pounds of cotton annually. There were, in 1850, over 1,400 manufacturing establishments of all kinds in the state.

Railroads and Canals.—The aggregate length of railroads in operation in the state is about 300 miles, and about the same amount in process of construction. The longest canal in the state is the Santee, from Charleston to Santee river, 22 miles. There are several other shorter ones, amounting in the aggregate to about 30 miles.

Commerce.—The foreign commerce of South Carolina is quite large, its exports and imports amounting to about \$14,000,000 annually. The shipping owned in the state is about 40,000 tons. Charleston is the principal port, and enjoys about nine tenths of the commerce.

Education.—There are three colleges in South Carolina. The Charleston college, founded in 1785; the college of South Carolina, founded in 1804; and the Erskine college, in Abbeville district. There are three theological seminaries in the state. There is also a medical college at Charleston. There are about 1,000 public schools, and 200 academies, in various parts of the state.

Population.—In 1790, 249,073; in 1800, 345,591; in 1810, 415,715; in 1820, 502,741; in 1830, 581,185; in 1840, 594,398; in 1850, 668,507. Number of slaves in 1790, 107,094; in 1800, 146,151; in 1810, 196,365; in 1820, 258,475; in 1830, 315,401; in 1840, 327,038; in 1850, 384,984.

History.—The state of South Carolina embraces a portion of the ancient territory of Florida, as first discovered by Ponce de Leon, in 1512; as well as a part of Carolina, as colonized by Coligni with Huguenots, in 1562-'65; or a part of Virginia, as granted to Sir Walter Raleigh, in 1584. In about the year 1630, another grant was made to Sir Robert Heath, of the tract lying between 30° and 36° north latitude, which was erected into a province, under the name of "Carolina." As no settlements were made under this grant, the charter was declared void. In 1663, the province of Carolina was granted, by Charles II. to Lord Clarendon and seven others. Two years later, the grant was enlarged, so as to comprise all the territory between 31° and 36½° north latitude, extending westward from sea to sea. In 1670, a small body of English emigrants, under William Sayle, commenced the settlement of Old Charleston, on the south side of Ashley river, which they called "Carteret County Colony," in honor of one of the proprietors. From this place they removed, in 1679, to the present site of Charleston. In 1720, the proprietary government was thrown off, and that of the crown established. In 1729, after much controversy and difficulty between the proprietors and the crown, seven out of the eight sold all their claims to the soil and rents in both Carolinas to the king, for £17,500, and the provinces then became royal governments, entirely unconnected, under which they remained until the Revolution. South Carolina early resisted British oppression, and was one of the confederacy in 1776. It ratified the constitution of the United States, and was admitted into the Union as a sovereign state, in 1788. Mottoes of the seal *Animus ophibueque parati*: "Ever ready in spirit and achievements." Reverse—*Dum spiro spero*: "While I live I hope."

Government.—The governor is elected for two years, by a joint vote of both houses of the assembly. After having served one term, he is ineligible for the next four years. A lieutenant-governor is chosen in the same manner, and for the same period. The senate consists of 45 members, elected by districts for four years. The house of representatives consists of 124 members, apportioned among the several districts, according to the number of white inhabitants and taxation, and are elected for two years. The representatives and half the senators are chosen every second year, in

Scale of mfg. in

October. The chancellor and judges of the supreme court are chosen by the joint ballot of both houses of the assembly, and hold their offices during good behavior. Every free white male citizen, 21 years of age, who has resided in the state two years immediately preceding the election, and who is possessed of a freehold of 50 acres of land, or a town-lot, six months before the election; or not possessing this freehold, who shall have resided in the election district in which he offers to vote six months before the election, and have paid a tax of three shillings sterling to the support of the government, has the right of suffrage.

 SPRINGFIELD, city, p. t., and seat of justice of Hampden county, Mass., situated on the east side of Connecticut river, 91 miles southwest of Boston, and 363 miles from Washington. It principally occupies a single street, parallel with the river, and contains many handsome buildings. Pleasant alluvial meadows gradually rise from the river into a region of less fertility. A bridge here spans the river to West Springfield. Manufactures of various kinds are largely produced, and give to the place its prosperity. The most important establishment is the United States arsenal, which, built on an elevation above the village, presents within and without an imposing spectacle. Small-arms are made at the factory, one mile distant, on Mill river. The Western railroad, between Albany and Boston, and the chain of railways through Connecticut river valley to Hartford, New Haven, and New York, concentrate at this point. The population in 1810 was 2,767; in 1820, 3,914; in 1830, 6,784; in 1840, 10,985; in 1850, 11,766.

SPRINGFIELD, p. v., seat of justice of Sangamon co., and capital of the state of Illinois ; from W. 780 ms. The town is situated four miles south of Sangamon river, and became the capital of the state in 1840. It is surrounded by a rich and populous region, picturesque varied with prairies, forests, vales, and gentle elevations. The village is one of the most pleasant and beautiful in the west, situated on the border of extensive prairie, laid out with broad and shaded streets, interspersed with spacious lawns and squares, and indicating, in its neat and comfortable dwellings, prosperity and vigorous health. It contains a number of fine public schools, academies, churches, a jail, market-house, courthouse, and the statehouse, a costly and elegant structure. The Sangamon and Morgan railroad extends to Naples, on Illinois river, 54 miles distant. The population in 1840 was 2,579 ; in 1850, 4,533.

SYRACUSE, city, Salina township, seat of justice of Onondaga co., N. Y., 131 ma. W. of Albany; from W. 348 ma. Few inland towns have a more advantageous position; in the midst of a region rich in exhaustless salt springs, it communicates with Lake Ontario by the Oswego canal, and the Oswego and Syracuse railroad, which here join respectively the Erie canal and the great central railroad of New York. The buildings of Syracuse are chiefly of brick; it also contains an elegant hotel and several churches. A branch canal connects the place with Salina, about a mile distant, and between the two places, are extensive manufactories, yielding a vast quantity of salt, and a large annual revenue to the state. The population in 1830, was 2,565; in 1840, 6,502; in 1850, 25,251.

TALLADEGA, c. h., p. v., seat of justice of Talladega co., Ala.; from W. 757 m. Watered by a tributary of Coosa river.

TALLAHASSEE, city, seat of justice of Leon co., and capital of the state of Florida; from W. 896 m. Situated in the midst of a fertile and undulating region, upon elevated ground, from which several pure springs issue and unite in a good mill-stream. This city, like the state, is of recent growth. Thirty years ago, its site was a luxuriant but unpeopled wilderness. It is now an increasing town, laid out with streets and public squares, with respectable buildings. It has a statehouse, churches, jail, markethouse, bank, and other conspicuous edifices. Twenty miles south of Tallahassee is St. Marks, on the gulf of Mexico, where ships discharge their cargoes bound for the capital, to which a railroad conveys them. The population varies in winter and in summer. In the former season, many resort to this place from colder regions to enjoy the mild and salubrious climate. In 1826, there about 800 inhabitants; in 1830, 1,500; in 1840, from 1,616 to 2,500; in 1850 —.

TALLAHATCHEE COUNTY, situated in the north-westerly part of Mississippi, and traversed by Yazoo river. Area, 1,188 square miles. Seat of justice, Charleston. Pop. in 1840, 3,985; in 1850, 4,643.

TALLALOOSA, p. o., Marshall co., Miss.

TALLAPOOSA COUNTY, situated in the east part of Alabama, and traversed by Tallapoosa river. Area, 910 square miles. Seat of justice, Dadeville. Pop. in 1840, 8,444; in 1850, 15,584.

TENALLYTOWN, p. o., Washington co., D. C.

TENNESSEE, one of the United States, lies between 36° and 37° 42' north latitude, and 81° 30' and 90° 10' w. longitude from Greenwich; and is bounded north by Kentucky and Virginia, southeast by North Carolina, from which it is separated by the Iron and Unaka mountains, south by Georgia, Alabama, and Mississippi, and

west by Arkansas and Missouri, from which it is separated by the Mississippi river. Its superficial area is 45,600 square miles.

Physical Aspect.—This state is widely diversified in surface, soil, and climate. The eastern portion abounds in mountains and hills, some of them lofty, and presenting scenery peculiarly grand and picturesque. The middle section is less bold in its features, though hilly, and gradually becomes undulating, and even level, as we approach the Ohio. The geological formation is wholly secondary, except a small portion of the eastern part, which is transition, and numerous spots of alluvion on the banks of the streams. The soil of the western division is black and rich; in the middle there are large quantities of excellent land; and in the eastern or mountainous parts the soil is generally thin, except in the valleys, where it is exuberantly fertile.

Mountains.—Of these, the Cumberland, or Great Laurel ridge, is the most remarkable. Stone, Yellow-Iron, Smoky, and Unaka mountains, join each other, and

form (in a direction nearly northeast and southwest) the boundary between North Carolina and this state. Northwesternly of these, and separated from each other by valleys from five to fifteen miles wide, are Bay's, Clinch, and Powell's mountains, and Copper and Welling's ridges.

Rivers.—The principal rivers are, the Mississippi, Cumberland, Tennessee, Clinch, Holston, Duck, French, Broad, Hiwassee, Nolichucky, Reelfoot, Tellico, Obion, Elk, Forked Deer, and Wolf.

Climate.—The climate is comparatively mild, and generally healthy. On some low grounds, however, in the western part of the state, bilious attacks and agues prevail more or less during the summer and autumn months. In the eastern division, the temperature is so modified by the mountain air on one side, and the breezes from the Mexican gulf on the other, that its climate, perhaps, is as desirable as any in the Union. The winters are by no means severe, and snow seldom falls to a greater depth than ten inches, or lies upon the ground longer than ten days.

Productive Resources.—The chief products are, horses, mules, neat cattle, sheep, swine, poultry, sugar, wax, silk, wool, cotton, hemp, flax, hay, pitch, tar, tobacco, rice, wheat, rye, barley, buckwheat, oats, potatoes, and Indian corn. Of the mineral and fossil resources, iron, gold, bituminous coal, salt, marl, buhr-stone, and saltpetre, are the principal. Nitrous earth is obtained from the caverns, of which there are several in the state.

Manufactures.—In 1850, there were in Tennessee 2,789 manufacturing establishments, that produced goods to the value of \$500 and upward each annually. The principal manufactures are, cotton and woollen goods, leather, pottery, machinery, carriages, cordage, &c.

Railroads.—The principal roads in Tennessee now in operation are, the Charleston and Memphis, and one from the Georgia state line to Chattanooga; but there are several other roads in rapid process of construction, and still others projected.

Commerce.—Tennessee has no direct foreign commerce, but its internal and river trade is large.

Education.—There are in Tennessee two universities, and six colleges, namely: East Tennessee college, founded in 1792; Greenville and Washington colleges, in 1794; Nashville university, in 1806; Jackson college, in 1833; Cumberland university, in 1844; Franklin college, in 1845; and Union college, in 1848. There are also two theological seminaries, a law and a medical school, about 200 academies and high schools, and 1,500 common schools in the state.

Population.—In 1790, 30,791; in 1800, 105,602; in 1810, 261,727; in 1820, 422,813; in 1830, 681,904; in 1840, 829,210; in 1850, 1,002,625. Number of slaves in 1790, 3,417; in 1800, 13,584; in 1810, 44,535; in 1820, 80,107; in 1830, 141,603; in 1840, 183,059; in 1850, 239,461.

Government.—The legislative power is vested in a general assembly, consisting of a senate of 25 members, and house of representatives, of 75 members, and the executive power in a governor (eligible six years out of eight); all chosen biennially (the odd year), the first Monday in October. The judicial power is vested in a supreme court, of three judges, elected by the legislature for twelve years, and inferior courts, whose judges are elected by the legislature for eight years. Every free white citizen of the United States, of the age of twenty-one years, and a citizen of the county wherein he may offer his vote six months next preceding the day of election, is entitled to vote for civil officers. Ministers of the gospel are not eligible to a seat in the legislature. No person who denies the being of a God, or a future state of rewards and punishments, can hold any civil office. Lotteries are prohibited; and persons who may be concerned in duels are disqualified for holding office in the state.

History.—Tennessee was originally a part of the province of Louisiana, as settled and claimed by the French, prior to the year 1763; or a part of Carolina, as granted by Charles II., of England, to Lord Clarendon and others, in 1661. The first settlement was made by Bienville, in 1740, who built Fort Assumption, on the site where Memphis now stands. The first permanent settlements, however, were not made before 1763-'69, and these were by emigrants from North Carolina and Virginia. The country was included within the jurisdiction of North Carolina from 1729 to 1790, when it was placed under a separate territorial government, by the name of the "Territory South of the River

Ohio." In 1784, North Carolina ceded this territory to the United States on condition that they should accept of it within two years from the passage of the act, retaining jurisdiction over it herself, until Congress should make provision for a territorial government. Upon this, the same year, the inhabitants resolved to organize a territorial government on their own responsibility; and accordingly a convention of deputies formed a constitution for a new state, to be denominated "Frankland," and announced to North Carolina, that they considered themselves independent of her. A portion of the people adhering to North Carolina, two conflicting legislatures, with their subordinate courts, were exercising authority in the territory. In 1789, the legislature of North Carolina authorized and instructed its members in Congress to execute deeds of conveyance for the territory of Tennessee, which they did the following year. In 1796 the inhabitants, by a convention at Nashville, formed a constitution, and Tennessee was, the same year, admitted into the Union as an independent state. The original constitution of Tennessee continued in force till 1835, when the present constitution was adopted by the people. Motto of the seal, "Agriculture," "Commerce."

TEXAS, one of the United States, so called, according to tradition, from the Camanches, who, on discovering the country, exclaimed, "Tehas! Tehas!" which, in their language, signified, "The happy hunting-ground." According to other authority, it was named Texas, by the Spanish commander, De Leon, to commemorate kind-

ness he received from the Animals Indians of this region, on visiting them in 1629, the appellation, signifying, in their dialect, "friends." It lies between 26° and 36° 30' north latitude, and 93° 20' and 107° w. longitude from Greenwich. It is bounded north by New Mexico, and the Indian Territory, the latter of which is separated in part by Red river, east by Arkansas and Louisiana, the

26 Lon. West from 24 Washington

latter being separated in part by the Sabine, southeast by the gulf of Mexico, and southwest by Mexico, from which it is separated by the Rio Grande. Its superficial area is 225,000 square miles.

Physical Aspect.—The general aspect of this state is that of a vast inclined plain, gradually sloping eastward from the mountains on the westerly side to the coast. From the borders of the Mexican gulf, and ranging inland from 30 to 75 miles, the surface is even; but, unlike any of the other southern states, it is remarkably free from marshes, or swamps. The country between the Sabine and Galveston bay consists mostly of barren prairies, except along the streams, where it is woody and flat. The remaining portion of the coast, southwestward, is low and sandy, and, for some distance inland, the eye is relieved by beautiful prairies, insulated groves, and meandering streams. The soil of this region is mostly, if not wholly, made up of alluvion, which is often remarkably fertile, and of great depth. Next in order comes the "rolling country," which extends inland from 150 to 200 miles further, presenting a delightful country, diversified by fertile prairies, pleasant woodlands, and numerous rivulets, fed from the purest springs. Limestone and sandstone form the common sub-strata of this region, the surface soil being a rich, friable loam, mixed more or less with sand. The upper, or mountainous region, situated chiefly in the western section of the state, forms a part of the great Sierra Madre, or Mexican Alps, the remotest extremity of which consists of an elevated table-land, "where the prairies not unfrequently resemble the vast steppes of Asia, except in their superior fertility."

Mountains.—The chief mountains are, the Guadalupe and Oregon ranges, which lie in the western part of the state.

Rivers, Lakes, and Bays.—The principal rivers are, the Rio del Norte or Rio Grande, Neches, Trinity, Brazos Rio, Colorado, Guadalupe, La Vaca, San Antonio, Nueces, Salado, Sabine, Red, and San Jacinto. Sabine and Caddo lakes lie partly in this state. The chief bays are, the Galveston, Matagorda, Copano, Espiritu Santo, and Corpus Christi.

Islands.—The principal of these are, Galveston, Matagorda, St. Joseph, Mustang, and Padre.

Climate.—The climate is decidedly more healthy than that of Louisiana, or of any of the other gulf states; still, on the low, alluvial coast, intermittents are prevalent in summer and autumn, but the yellow-fever is rarely known. From March till October but little rain falls, though gusts of wind, with thunder, frequently occur. During the rest of the year wet weather generally prevails. The winters are warm and mild on the coast, and for some distance inland snow is seldom seen, except on the higher mountains, or table-lands. From April to September the thermometer near the coast ranges from 63° to 100° Fahrenheit. The greatest heats, however, are tempered by strong and constant breezes, which begin to blow soon after the rising of the sun, and continue until afternoon. The nights throughout the middle region are refreshing and cool during the year.

Productive Resources.—The chief products of this state are, horses, mules, neat cattle, sheep, swine, wool, cotton, tobacco, oranges, figs, wine, olives, dates, sugarcane, wheat, rye, barley, oats, rice, potatoes, and Indian corn. Cotton and sugarcane are the agricultural staples. The mineral and fossil resources are, silver, iron, coal, bitumen, nitre, granite, limestone, slate, and gypsum. Salt may be manufactured from numerous lakes and springs. Buffalo and wild horses are found in vast numbers on the prairies.

Manufactures.—Texas at present is wholly an agricultural state; but it possesses all the pre-requisites for becoming eminently a manufacturing one. Its water-power is abundant; its labor cheap; and in its cotton, wool, iron, &c., may be found material to supply the demand of a manufacturing industry to almost an unlimited extent.

Railroads and Canals.—Texas is as yet without these important aids to internal commerce. Several railroads have been projected; among them may be mentioned, one extending from Red river to the gulf of Mexico.

Commerce.—The direct foreign commerce of Texas is small, amounting, in 1850, to but about \$50,000. Its coasting-trade, however, is of more importance. The shipping owned within the state amounts to about 50,000 tons.

Education.—The principal collegiate institutions in

Texas are, the Baylor university, at Independence, founded in 1844; the University of San Augustine; Wesleyan college, at San Augustine; Rutgersville college, and university of Nacogdoches. Its public school fund is derived principally from the school lands, and common schools are being established throughout the state.

Population.—In 1820, about 3,000; in 1850, 213,492. Number of slaves in 1850, 50,161.

Government.—The legislative power is vested in a senate and house of representatives. The senators are elected by the people, by districts, for the term of four years, one half being chosen biennially; their number is not to be less than nineteen, nor more than thirty-one. The representatives are elected for two years, by the people, by counties; the number is not to be less than forty-five, nor more than ninety. The executive power is vested in a governor, elected by the people, at the time and places of elections for members of the legislature; he holds his office for the term of two years, but is not eligible for more than four years in any term of six years. At the same time, a lieutenant-governor is chosen for the same term, who is president of the senate, and succeeds the governor in case of death, resignation, &c., of the latter. The judicial power is vested in a supreme court of three judges, in district courts, and in such inferior courts, as the legislature may, from time to time, establish. The judges of the supreme and district courts are appointed by the governor, and hold their offices for six years. The right of suffrage is granted to every free white male person over the age of 21 years, a citizen of the United States, who shall have resided in the state one year next preceding an election, and the last six months within the district in which he offers to vote. The creation, extension, or renewal of any banking or discounting company is prohibited. There is no imprisonment for debt.

History.—The present state of Texas embraces a part of the extensive country of Louisiana, as claimed by France, prior to the year 1763. It also comprised a province of Mexico, in the Provincias Internas, and remained as such, under Spanish, and subsequently under Mexican rule, until it declared its independence, in 1836. The first post in this country was established at Bexar, by the Spaniards, in 1681. In the year 1685, La Salle, in attempting to establish a colony at the mouth of the Mississippi, was deceived by his reckoning, and landed at the head of Matagorda bay, within the present limits of Texas, where the settlement of St. Louis was formed. Although this little colony was soon after broken up by the Indians, yet, as the standard of France had first been planted there, this region was thenceforth claimed as an appendage to Louisiana. With the exception of one or two unimportant missions, no other settlements were made in Texas until 1692, when a Spanish colony was planted at San Antonio de Bexar. Owing to various circumstances, it remained almost entirely unknown to the rest of the world, until the breaking out of the first Mexican revolution, in 1810. The only settlements of importance at that time were those of San Antonio de Bexar, Nacogdoches, and La Bahia, or Goliad. From the unsettled state of the country immigration was prevented, and it was not until after the second Mexican revolution, when she achieved her independence, in 1821, that any substantial advances were made toward further colonization. From this period emigrants in large numbers, mostly from the United States, continued to flow into Texas, under the encouragement of Mexico. When the federal constitution was overthrown, in 1834, the people of Texas refused to acknowledge the new government. They had sued for admission into the Mexican confederacy, as an independent state in 1832, but were refused, as Mexico was jealous of the growing power of the province. In 1835, a Mexican army was sent to reduce them to submission. In March, 1836, Texas declared itself an independent republic, and elected David G. Burnett president. A constitution was formed, having for its basis that of the United States. The battle of San Jacinto was fought on the 21st of April, between the Texan troops, under General Houston, and the Mexican army, under President Santa Anna, in which the latter was signally defeated. General Houston was elected president of the republic in September following. It sought for admission into the Union, which was granted by an act of Congress passed in February, 1845. On the 4th of July following the people of Texas,

In convention, adopted a state constitution, and it became an independent state of the Union.

- TRENTON**, city, seat of justice of Mercer co., and capital of the state of New Jersey, situated on the east side of Delaware river, at the head of sloop-navigation, 30 miles northeast of Philadelphia, 60 miles southwest of New York, and 166 miles from Washington. The city is pleasantly located on ground somewhat uneven, the streets regular, and many of the buildings are elegant and substantial. The statehouse, built of stone, and covered with stucco, in imitation of granite, is finely situated, and commands a delightful prospect of the Delaware and surrounding country. Above the city, the river descends by rapids, or falls; and at the foot of this descent it is spanned by a fine bridge, 1,100 feet long, with five arches, supported by stone piers. One side of this bridge is appropriated to the railroad from New York to Philadelphia. At Trenton, the Delaware and Raritan canal meets a feeder, which enters the river 23 miles above the city. The falls afford an extensive water-power for manufacturing purposes, which has been increased by means of a dam across the river, and a raceway along its bank. Trenton is united to New Brunswick and New York by the New Jersey railroad; and, by the Philadelphia and Trenton railroad, with the

metropolis of Pennsylvania. The population in 1810 was 3,003; in 1820, 3,942; in 1830, 3,925 (township); in 1840, 4,035; in 1850, 6,466.

TROY, p. t., Orleans co., Vt., 53 ms. n. of Montpelier; from W. 569 ms. Watered by Missisquoi river and tributaries. Pop. 1,008.

TROY, city, seat of justice of Rensselaer co., N. Y., is situated on the east side of Hudson river, 6 miles north of Albany, and 151 miles north of New York. Formerly, this point was the head of sloop-navigation; but a dam across the river above, 1,100 feet long, and 9 feet high, with a lock, enables sloops to ascend to Lansinburg, four miles higher up. The city is built on level ground, at the foot of steep hills, the two chief of which have the classic names "Mount Ida" and "Mount Olympus." From both of these eminences spreads a wide prospect of the Hudson and the towns along its valley. It is laid out with broad and pleasant streets, and the houses are neat and substantial. South of the city, the Poestenkill comes tumbling and foaming through a wild ravine, affording a fine water-power for several mills, which lie buried in the deep, dark gorge. A railroad-bridge spans the Hudson to West Troy, a flourishing village in Albany county, where there is a United States arsenal, an extensive bell-foundry, cotton factories, and other establishments. Among the public buildings of Troy, besides its churches, the Troy Female institute and the Troy academy deserve notice from the reputation which they enjoy. Water is conveyed to the city from a basin in Lansinburg, elevated 72 feet above the level of the streets, through which it is distributed by iron pipes buried under ground. One and a half millions of gallons are thus supplied for daily consumption, or to extinguish fires.

Troy is united to Lake Champlain by railroad, via Saratoga and Whitehall, to Greenbush, opposite Albany; and to Schenectady, on the great central line, by one of two branch railroads—the other proceeding from Schenectady to Albany. There has been considerable rivalry in enterprises between Albany and Troy, which has probably injured neither city. The Erie canal passes through West Troy, and steamboats and numerous vessels communicate with New York and the other towns on the river. The population in 1810 was 3,885; in 1820, 5,264; in 1830, 11,401; in 1840, 19,334; in 1850, 28,785.

TROY, p. t., Bradford co., Pa., 149 ms. n. of Harrisburgh; from W. 256 ms. Watered by tributaries of Susquehanna river. Pop. 1,418.

UTAH COUNTY, situated in Utah territory. Area, — square miles. Seat of justice, Utah Lake.

UTAH LAKE, p. o., Utah co., Utah territory.

UTAH TERRITORY, formerly a part of California, and the "DESERT" of the Mormons, is situated between 37° and 42° north latitude, and 106° and 120° longitude west from Greenwich; and is bounded on the north by the territory of Oregon, on the east by the Indian territory and New Mexico (from which it is separated by the crest of the Rocky mountains), on the south by New Mexico, and on the west by California. Its superficial area is 188,000 square miles.

Physical Aspect.—Utah is one of the most singular countries in the world. It occupies the northern portion of the great basin between the Sierra Nevada and the Rocky mountains. The basin is some 500 miles in diameter every way, and comprises an area of 393,601 square miles. It is between 4,000 and 5,000 feet above the level of the sea, shut in all around by mountains, with its own system of lakes and rivers, and without any direct connection with the ocean. Partly arid and thinly inhabited, its general character is that of a desert, but with great exceptions—there being many parts of it very fit for the residence of a civilized people; and of these the Mormons have established themselves in one of the largest and best. Mountain is the predominating structure of the interior of the basin, with plains between; the mountains wooded and watered—the plains arid and sterile.

Mountains.—As mentioned above, the Rocky mountains extend along the eastern border of this territory, and the Sierra Nevada along the west. Two other ranges cross the territory, one named the Wahsatch river mountains, and the other the Humboldt's River or Timpanogos mountains.

Rivers and Lakes.—The principal rivers in Utah are, the Colorado, which, rising among the Rocky mountains in Oregon, empties into the gulf of California; and Humboldt's river, rising in the mountains to which it has given a name, and, after a long and solitary course, emptying into Humboldt lake. Other rivers are, Bear, Utah, Timpanogos, Nicolle, Salmon-Trout, Carson, Walker's, and Owen's rivers.—The most important lake in Utah is the Great Salt lake. The waters of this sheet are shallow, so far as explored, and are intensely salt, more so than those of the ocean—three gallons making one gallon of the purest, whitest, and finest salt. The shape of this lake is irregular, and it encloses numerous islands. It is supposed to be about 70 miles long. The lake has no known outlet. Utah lake is of fresh water, 35 miles long, and receives numerous fresh-water streams from the mountains. This lake abounds in fish. Utah lake is about 100 feet above the level of the Salt lake, and is connected with it by a strait,

about 35 miles in length, called by the Mormons the river Jordan. There are several other smaller lakes in Utah, but little is known of them beyond their locality.

Climate.—The climate of Utah does not present the rigorous winter which its mountain structure would seem to call for. The temperature is little lower than that incident to the latitude, and summer is scarcely gone before November.

Productive Resources.—Wheat, oats, and barley, yield abundantly in the Great Valley. Melons and all the vines grow in perfection, as also do vegetables; while hopeful efforts are making to raise the olive, orange, lemon, pineapple, tea, coffee, &c. The valley below produces tropical fruits, while the beech-land, or old lake-shore, at the altitude of three or four hundred feet, brings forth all the productions of the temperate zones; and still higher up, the cedar, pine, juniper, and other evergreens of a northern clime, flourish. The pasturage on the plains, as well as on the beech-land and side-hills, is luxuriant (the verdure reaching to the mountain-tops), equal for fattening qualities to that of California. Utah abounds in minerals. A geographical survey has brought to light an inexhaustible bed of stone-coal, equalling that of Newcastle; iron ore, with a vein of silver running through it, which latter alone would pay for working; gold, in small quantities, and platina, are found; and traces of copper and zinc have been discovered. Its mineral springs are famous, little as they have been tried, and their analysis shows them to be equal to those most resorted to at the east.

Population.—According to the census of 1850, there were 11,380 inhabitants in this territory.

Government.—Under the act of Congress organizing the territory of Utah, a legislative assembly is provided for, elected annually by the people, consisting of a council and house of representatives. All laws passed by the legislature require the approval of Congress to be valid. The governor and secretary of state are appointed by the president for four years. The judicial power is vested in a supreme court, district and probate courts, the judges of which are appointed by the president. The right of suffrage and eligibility to office are secured to every white male inhabitant, who was a resident of the territory at its organization, but the qualifications at subsequent elections are prescribed by the territorial legislature.

History.—That portion of Alta-California, now designated as the territory of Utah, was never settled by the Spaniards, nor was it ever more than a nominal dependency of that nation, or of the Mexican republic. Previous to the Mexican war, indeed, few white men, except those engaged in scientific explorations, had entered the country. About the period when that war broke out, the Mormons were driven from their city of Nauvoo, in Illinois, by mob-violence; and shortly afterward, a portion of them, under the leadership of Strang, removed to Beaver island, in Lake Michigan; while the main body of the sect, directed by Brigham Young (who was regarded as their true "prophet" after the death of their founder, Joseph Smith, and in opposition to the "infidel" leader Strang), migrated to the borders of the Great Salt lake. Their settlements became prosperous and populous, and within two years after the first pioneers had entered the country their

numbers had increased to about 10,000. After peace had been ratified, they found themselves without a civil government, and without protection for their persons or property. To remedy this anomalous condition of things, they organized a temporary government under the style of the "State of Deseret." Under its sanction they elected officers to manage the affairs of the commonwealth, and made application to Congress to be admitted into the Union as a sovereign state. But Congress did not deem that this new settlement had arrived at that state of maturity which would justify its erection into a state, and passed a law authorizing its organization as a territory. Congress reserved the right with Utah, as also with New Mexico, to divide it into two or more territories, or to attach portions of it to any state or territory in such manner and at such times as it may deem convenient and proper.

UTICA, city, seat of justice of Oneida co., N. Y., situated south of Mohawk river, 92 miles northwest of Albany, 233 miles east of Buffalo, and 388 miles from Washington. The city is built on a pleasant slope, facing the river; its streets are generally broad and regular, and its aspect exhibits the signs of prosperity, business activity, and successful industry. The Erie canal and the great central chain of railroads pass through Utica, and the former is here joined by the Chenango canal, which extends to Binghamton, on the Erie railroad, and furnishing an outlet for the agricultural products of the surrounding country. Manufactures of various kinds are extensively carried on. The population in 1820 was 2,972; in 1830, 8,323; in 1840, 12,782; in 1850, 17,565.

TALLADEGA, c. h., p. v., seat of justice of Talladega co., Ala.; from W. 757 m. Watered by a tributary of Coosa river.

TALLAHASSEE, city, seat of justice of Leon co., and capital of the state of Florida; from W. 896 m. Situated in the midst of a fertile and undulating region, upon elevated ground, from which several pure springs issue and unite in a good mill-stream. This city, like the state, is of recent growth. Thirty years ago, its site was a luxuriant but unpeopled wilderness. It is now an increasing town, laid out with streets and public squares, with respectable buildings. It has a statehouse, churches, jail, markethouse, bank, and other conspicuous edifices. Twenty miles south of Tallahassee is St. Marks, on the gulf of Mexico, where ships discharge their cargoes bound for the capital, to which a railroad conveys them. The population varies in winter and in summer. In the former season, many resort to this place from colder regions to enjoy the mild and salubrious climate. In 1826, there about 800 inhabitants; in 1830, 1,500; in 1840, from 1,616 to 2,500; in 1850 —.

TALLAHATCHEE COUNTY, situated in the north-westerly part of Mississippi, and traversed by Yazoo river. Area, 1,188 square miles. Seat of justice, Charleston. Pop. in 1840, 2,985; in 1850, 4,643.

TALLALOOSA, p. o., Marshall co., Miss.

TALLAPOOSA COUNTY, situated in the east part of Alabama, and traversed by Tallapoosa river. Area, 910 square miles. Seat of justice, Dadeville. Pop. in 1840, 8,444; in 1850, 15,584.

TENALLYTOWN, p. o., Washington co., D. C.

TENNESSEE, one of the United States, lies between 36° and 37° 42' north latitude, and 81° 30' and 90° 10' w. longitude from Greenwich; and is bounded north by Kentucky and Virginia, southeast by North Carolina, from which it is separated by the Iron and Unaka mountains, south by Georgia, Alabama, and Mississippi, and

west by Arkansas and Missouri, from which it is separated by the Mississippi river. Its superficial area is 45,600 square miles.

Physical Aspect.—This state is widely diversified in surface, soil, and climate. The eastern portion abounds in mountains and hills, some of them lofty, and presenting scenery peculiarly grand and picturesque. The middle section is less bold in its features, though hilly, and gradually becomes undulating, and even level, as we approach the Ohio. The geological formation is wholly secondary, except a small portion of the eastern part, which is transition, and numerous spots of alluvion on the banks of the streams. The soil of the western division is black and rich; in the middle there are large quantities of excellent land; and in the eastern or mountainous parts the soil is generally thin, except in the valleys, where it is exuberantly fertile.

Mountains.—Of these, the Cumberland, or Great Laurel ridge, is the most remarkable. Stone, Yellow-Iron, Smoky, and Unaka mountains, join each other, and

VERMONT, one of the United States, signifying in French, "Green Mountains" was first so called by the people, in their declaration of independence, in 1777. It lies between 42° 44' and 45° north latitude, and 71° 33' and 73° 25' west longitude from Greenwich, and is bounded north by Canada; east by New Hampshire, which is

separated from it by Connecticut river; south by Massachusetts; and west by New York, from which it is separated, in part, by Lake Champlain, and contains 10,200 square miles.

Physical Aspect.—The surface of this state is generally uneven, and a great part of it mountainous. A large proportion of the soil is fertile, and adapted to the various purposes of northern agriculture. It is generally deep, of a dark color, rich, moist, warm, loamy, and seldom parched by drought. The "intervales" along the rivers and lakes are regarded as the best for tillage; and much of the land among the mountains is excellent for grazing, and here there are found many fine farms.

Mountains.—The Green mountains, so named on account of the evergreens with which they are covered, extend in a lofty, unbroken range, quite through the central part of the state, from north to south. In the southern part of Washington county they are separated into two ridges, the most westerly of which is much the highest. The highest elevations in this ridge are Killington peak, Camel's Hump, or "Camel's Rump," as it is commonly called, and the "Chin," in Mansfield mountains. Ascutney is another noted mountain of this state, lying at the southward of Windsor.

Rivers and Lakes.—The principal rivers are the Connecticut, Lamoille, Onion, Missisque, Winooski, White, Black, Passumpsic, Deerfield, West, and Otter Creek. Lakes Champlain and Memphremagog lie partly in this state. Among the smaller bodies of water are Lakes Dunmore and Bombazine.

Islands.—The principal of these are North and South Hero, and La Motte, all of which are in Lake Champlain.

Climate.—The climate is remarkably healthy, but is subject to great extremes of heat and cold, the range of temperature varying from 27° below zero Fahrenheit to 100° above. Winter usually commences in its greatest severity early in December, and often continues till April. During this season there is generally a prevalence of fair weather, and the cold is more uniform and steady than in other parts of New England near the coast.

Productive Resources.—The chief products are horses, mules, neat cattle, sheep, swine, poultry, butter, cheese, sugar, wax, silk, wool, lumber, pot and pearl ashes, hay, hops, hemp, flax, wheat, rye, barley, buckwheat, oats, potatoes, and Indian corn. Of the mineral or fossil resources, lead, iron, copperas, marble, limestone, and granite, form the principal.

Manufactures.—Leather, bar and cast iron, boots and shoes, linseed oil, nails, mechanical and agricultural implements, cotton and woollen goods, paper, &c., are among the products of manufacturing industry. Marble is quarried, sawn, and polished, in several places.

Railroads and Canals.—There are several long lines of railroad in Vermont, extending from the borders of Massachusetts and New Hampshire to Burlington and Canada, and from Rutland to Whitehall and Troy in New York. There are about 400 miles of railroad in the state. There are some short canals, designed to overcome obstructions in the navigation of the Connecticut and White rivers.

Commerce.—The foreign commerce of Vermont is mostly with Canada. Its principal port is Burlington, on Lake Champlain. Its domestic and foreign trade amounts in value to about three fourths of a million of dollars annually.

Education.—The oldest literary institution is the university at Burlington, founded in 1791. There are also, Middlebury college, Norwich university, and a medical school at Woodstock, all in a flourishing condi-

tion. Besides these, there are many academies, and some 3,000 common schools in the state.

Population.—In 1790, 85,416; in 1800, 154,465; in 1810, 217,713; in 1820, 235,764; in 1830, 280,652; in 1840, 291,948; in 1850, 314,120.

Government.—The legislative power is vested in a senate of thirty members, and a house of representatives, consisting of one member from each town; and the executive power in a governor, or, in his absence, a lieutenant-governor—all chosen annually by the people, on the first Tuesday in September. The judiciary powers are vested in a supreme court of five judges, and county courts (each composed of one judge of the supreme court and two assistant judges), all chosen annually by the legislature. A council of thirteen censors is chosen once in seven years, to supervise the legislative and executive branches of government. The right of suffrage vests in male citizens of twenty-one years of age, who have resided in the state one year, and are of quiet and peaceable behavior.

History.—The first permanent settlement in Vermont was made at Fort Dummer, in 1734, though the north-westerly part of this state was visited by Champlain and others as early as 1609. In the year 1739, New Hampshire claimed jurisdiction of the territory, and made many grants of land west of Connecticut river. The same territory was also claimed by New York, whose right was established by decision of the crown, in 1764. In the meantime, New York had also made grants to others of the same tracts, which caused continued disputes, and even resistance, for years. In 1774, New York passed severe enactments on the subject; but, at the commencement of the Revolution, the contest was suspended. In 1777, the people, preferring a government of their own, met in convention, and declared themselves a free and independent state. In consequence of these conflicting claims, Congress dared not admit Vermont into the Union at the commencement of the Revolutionary war, for fear of offending New Hampshire and New York, although she had expressed a readiness to throw off the British yoke. By another convention, held at Windsor, in 1777, a state constitution was adopted, but the government was not organized before 1778. In 1786, this constitution was modified, and was again revised in 1793. In 1790, the controversy with New York was ended by the payment of \$30,000, and the year following Vermont was admitted into the Union as a sovereign state. Motto of the seal, "Freedom and Unity."

VIRGINIA, one of the United States, popularly known as the "Old Dominion," is situated between 36° 33' and 40° 43' N. latitude, and 75° 25' and 83° 40' west longitude from Greenwich: and is bounded north by Ohio, Pennsylvania, and Maryland; northeast by Maryland, from which it is separated by the Potomac; east by the

Atlantic; south by North Carolina and Tennessee; west by Kentucky, from which it is separated by the Cumberland mountains and Big Sandy river; and northwest by Ohio, from which it is separated by the river Ohio. Its superficial area is 61,352 square miles.

Physical Aspect.—The face of the country of this state, though exhibiting but little grandeur, is greatly diversified, and in some parts is rich and pleasing, in the continued outline of hill, valley, river, and plain. The soil, too, is as varied as the surface, as every grade of fertility and sterility is to be met with, from the richest to the most barren. Virginia may be divided into four zones, essentially differing from each other. The first, which extends from the coast to the head of tide-water, at Fredericksburgh, Richmond, &c., over 100 miles, is low and flat, in some places fenny, in others sandy, and on the margin of rivers the soil is composed of a rich loam. The second division extends from the head of tide-water to the Blue ridge. Near the former the surface is level; higher up the streams it becomes undulating and swelling; and, as we approach the mountain, it is often broken and abrupt. The soil is divided into sections, unequal in quality, running parallel to each other, and extending quite across the state. The parallel of Chesterfield, Henrico, Hanover, &c., is thin and sandy, and, except on the borders of the rivers, is unproductive. That of Goochland, Cumberland, Prince Edward, Halifax, &c., is generally fertile. Fluvanna, Buckingham, Campbell, Pittsylvania, again, are poor; and Culpeper, Orange, Albemarle, Bedford, &c., are rich, though frequently consisting of a stony, broken soil, reposing on a substratum of tenacious and red-colored clay. The third division embraces the valley between the Blue ridge and the great North Shenandoah and Branch mountain, and the Alleghany chain, which, with little interruption, extends from the Potomac to Carolina and Tennessee. The surface of the valley in some instances is broken by sharp, solitary mountains, detached from the general chain, the flanks of which are nearly bare, or but thinly covered with stunted pines. The soil in the valley consists of a rich mould, formed on a bed of limestone. The fourth division extends from the Alleghanies to the river Ohio, and is composed of a country wild and broken, in some parts fertile, but generally barren or poor. The surface is uneven and hilly, but the soil of a great proportion of Randolph and the adjacent counties, in the northwest part of the state, is excellent, and well adapted for grazing.

Mountains.—The Alleghany range, including its numerous ridges, covers the whole middle sections of the state. Among the local names, besides the Blue ridge, may be mentioned the Cumberland, Great North Shenandoah, Branch, Great Flat Top, Iron, and Cacapon mountains.

Rivers, Lakes, and Bays.—The principal rivers are, the Potomac, James, Shenandoah, Rappahannock, Pamunky, Mattaponi, York, Rivanna, Elizabeth, Appomattox, Nottoway, Staunton, Meherrin, Ohio, Great Kanawha, Sandy, Little Kanawha, Cheat, and Monongahela. Drummond lake lies in the Dismal swamp, which serves as a feeder to the main trunk of the Dismal-Swamp canal. The lower part of Chesapeake bay lies wholly in this state. Among the lesser bays are the Pokomoke, Sinepuxent, and Mob Jack.

Islands.—Along the coast there is a long chain of low, flat islands, the chief of which are, Wallop's, Matomkin, Cedar, Paramore's, Hog, Prout's, and Smith's.

Climate.—The climate of the tide-water region is generally healthy, except in the months of August, September, and October, during which it is hot and moist, and bilious complaints or intermittents prevail. As we ap-

proach the Blue ridge, the inhabitants are more robust and healthy than in any other part of the state. West of the mountains, the climate is salubrious and cool.

Productive Resources.—The principal products of this state are horses, mules, neat cattle, sheep, swine, poultry, butter, cheese, wine, sugar, wax, silk, cotton, wool, hemp, flax, tobacco, rice, wheat, rye, barley, oats, buckwheat, potatoes, and Indian corn. Of the fossil and mineral resources, gold, copper, iron, lead, coal, marble, limestone, and salt, are the most important. But the most valuable are iron, coal, and salt. The belt of country in which gold is found is in the county of Spotsylvania, and the regions adjacent. The coal-fields are very extensive, anthracite being found on the easterly side of the Alleghanies, and bituminous on the western. Salt-springs occur on the banks of the Great Kanawha, where salt is manufactured in great abundance.

Manufactures.—Iron ranks first among the manufactures of Virginia, embracing machinery, firearms, hardware, cutlery, &c. Cotton and woollen manufactures rank next, in which about \$2,500,000 is invested. In the manufacture of tobacco about \$2,000,000 is invested.

Railroads and Canals.—There are about 700 miles of railroad in operation in Virginia, and more in process of construction. The most important canals in the state are, the James River and the Kanawha canal, reaching from Richmond to Lynchburg, 146 miles, and the Dismal-Swamp canal, 23 miles.

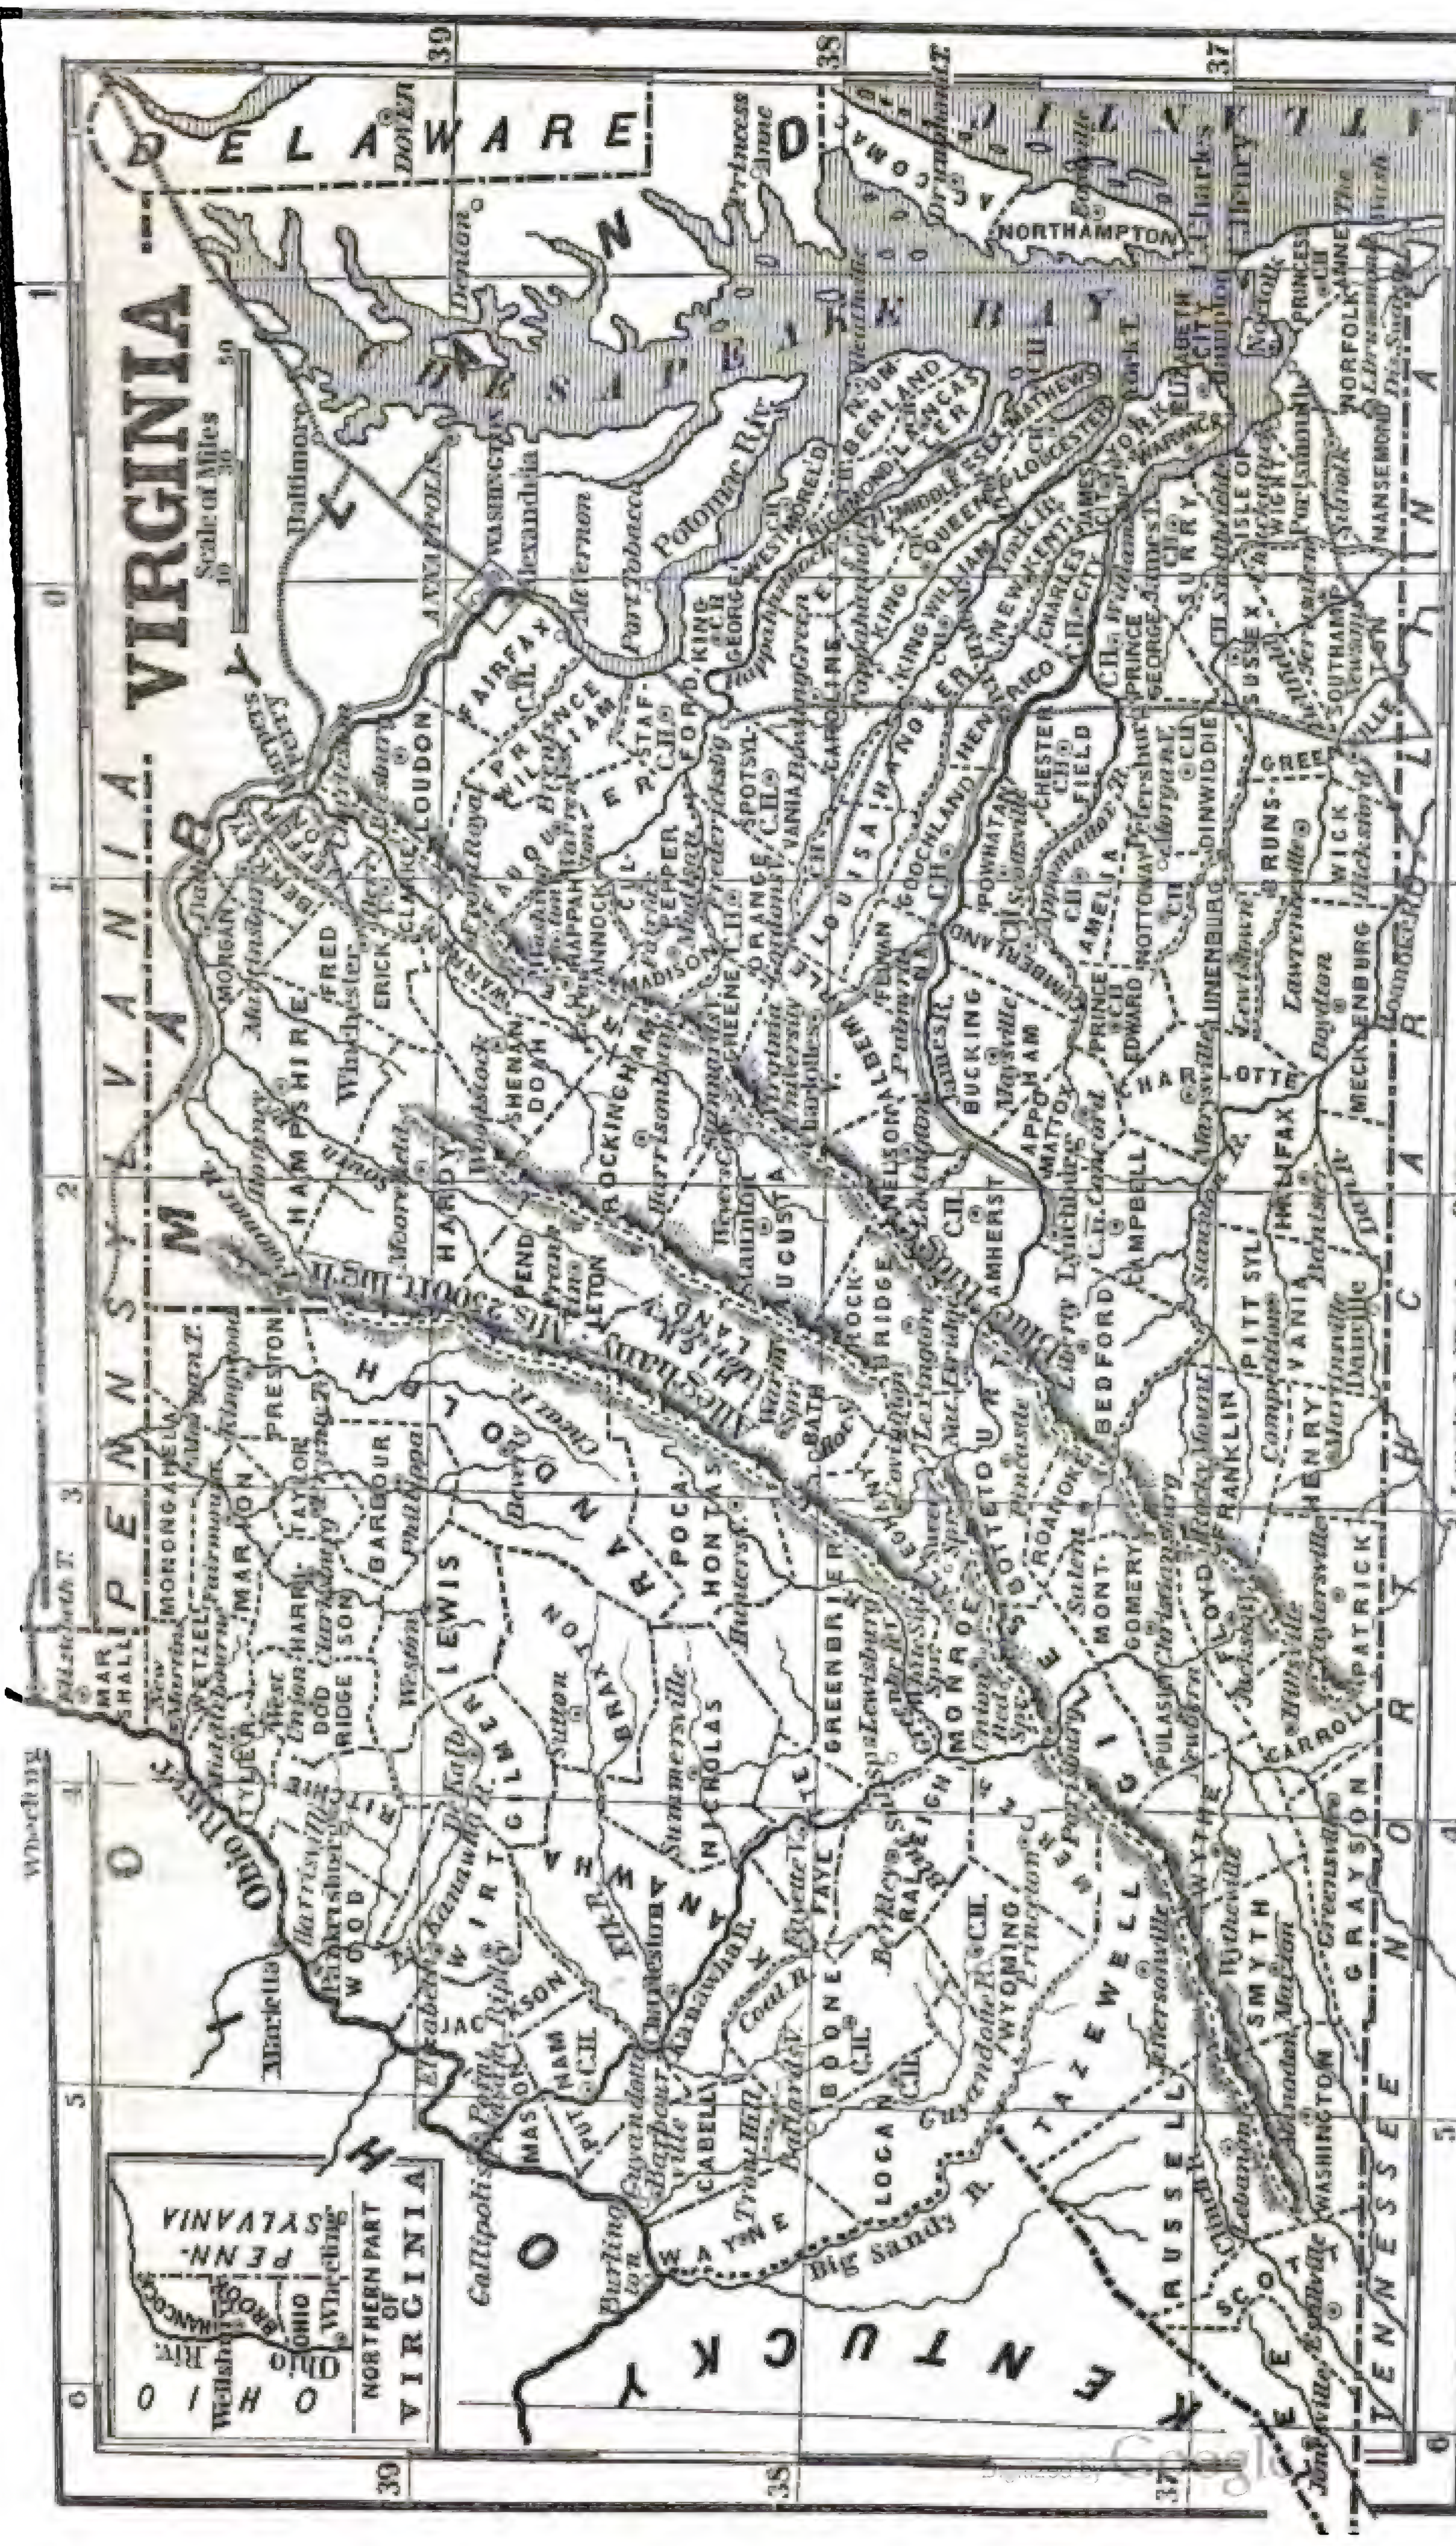

Commerce.—The foreign exports and imports of Virginia amount to about \$5,000,000 annually. The domestic exports and imports amount to about \$25,000,000 annually. The principal articles of domestic export are tobacco and flour. The shipping owned in the state is about 60,000 tons.

Population.—In 1790, 748,308; in 1800, 880,200; in 1810, 974,642; in 1820, 1,065,379; in 1830, 1,211,405; in 1840, 1,239,797; in 1850, 1,421,661. Number of slaves in 1790, 203,427; in 1800, 345,796; in 1810, 392,518; in 1820, 425,153; in 1830, 469,757; in 1840, 448,967; in 1850, 472,528.

Education.—The principal literary institutions of Virginia are, William and Mary college, at Williamsburg; Hampden Sidney college, in Prince Edward county; Washington college, at Lexington; the university, at Charlottesville; Randolph college, at Boystown; Emory and Henry college, at Glade Spring; Rector college, in Taylor county; Bethany college, at Bethany; and Richmond college, at Richmond. There are also a military institute at Lexington; medical schools at Richmond, Charlottesville (attached to the university), and Winchester; law schools, attached to the university and William and Mary college; and theological seminaries in Fairfax and Prince Edward counties, and at Richmond. There are also about 500 academies and 2,500 common schools in the state. The permanent literary fund of Virginia is over \$1,500,000.

Government.—The legislative power is vested in a senate of 50 members, chosen for four years, one half biennially, and a house of delegates, of 152 members, chosen biennially. The executive power is vested in a governor, elected by the people, for four years, who is ineligible for the succeeding term; and a lieutenant-governor, elected for a like term. The legislature meets biennially, at Richmond. A secretary of state, treasurer, and auditor, are elected by the assembly. The judiciary power is vested in a supreme court of appeals, district courts, and circuit courts, all the judges of which are elected by the people. The right of suffrage is extended to every white male citizen twenty-one years of age, who has resided two years in the state, and one year in the place where he offers to vote. Votes, in all elections, are *vote voce*; dumb persons may vote by ballot.

History.—The present state of Virginia embraces but a portion of the ancient "Virginia," as granted to Sir Walter Raleigh, in 1584, which included all the lands he should discover between the thirty-third and fortieth degrees of north latitude, and which name became finally restricted to what now constitutes this state. Under this charter, Raleigh planted a colony on the island of Roanoke; but, after repeated trials and disasters, the patent was vacated, and the country was again left to the quiet possession of the Indians. The first permanent settlement in America, by the English, was made at Jamestown, in 1607, by 105 adventurers. A second charter was granted to the London company, in 1609, radically changing the constitution, and enlarging the territory of the colony along the coast, within the limits

NORTH CAROLINA

of 200 miles north and 200 miles south of Old Point Comfort; that is, from the southern limits of North Carolina to the northern boundary of Maryland, and extending westward from sea to sea. But so vague were the views of the company, or the adventurers, under this patent, that discord and wretchedness compelled the settlers to break up their establishment in 1610. The year following, Sir Thomas Gates arrived with 300 immigrants, and assumed the government of the colony, which then numbered 700 men. In 1612, a third charter was granted to the London company; but the colony remained under anarchy and tyranny until 1619, when martial law was abolished, and the first provincial assembly was convened at Jamestown. In 1621, the company granted to their colony a "written constitution," which, with singular liberality, ordained that a general assembly, chosen by the people, should be convened annually, its acts to be subject to the supervision of the company in England. The acts of the company, also, were not binding, till ratified by the assembly. It established the right of trial by jury. These rights and privileges were ever after claimed by Virginia, and formed the basis of her civil freedom. In 1622, a general massacre of the English was attempted by the Indians, and 347 of them perished. The rest were saved by the timely warning of Pocahontas, daughter of Powhatan, the Indian king. She was like a preserving angel to the feeble settlement. In 1624, the London company was dissolved, and the colony was again subject to the crown. In 1644, another general massacre of the whites was attempted, but without success, the blow having been fortunately averted by the skill, prudence, and courage, of Captain John Smith, one of the most efficient men in the colony. During the commonwealth, under Cromwell, to the restoration of Charles II., in 1660, Virginia was left almost entirely to her own independence. Her governors during this period were chosen by the burgesses, who were the representatives of the people. In 1673, Charles II. granted to Lord Culpeper, and the earl of Arlington, "all the dominion of land and water called Virginia," for thirty-one years. Within two years after this event the representative system was virtually abolished, and the liberties of the people were otherwise seriously abridged. This, together with the pressure of increasing grievances, resulted in open rebellion, followed by Indian aggressions, which continued for four years. In 1677, Culpeper, after purchasing the rights of Arlington, was appointed governor

over the colony for life, and Virginia became a proprietary government, which remained in force until 1684, when the grant was recalled, and Culpeper expelled from office. The remaining portion of the history of this state is marked with few incidents of importance, down to the period of the Revolution, except those in the French and Indian war, between 1754 and 1763. In 1786, that part of Virginia now constituting the state of Ohio was erected by act of Congress into the "Western Territory," the name of which was afterward changed to the "Territory northwest of the river Ohio." The same year, the district of Kentucky was also set apart, by act of Congress, into a new territory, but the separation from the "Old Dominion" did not take place before 1792. The first constitution of Virginia was adopted in 1776, which was revised and amended in 1830, and continued in operation till October, 1851, when a new one was adopted. The constitution of the United States was ratified in 1788. Motto of the seal, *Sic semper tyrannis*—"So be it ever to tyrants"—in allusion to the emblem on the seal of an Amazon, resting on a spear with one hand, and holding a sword in the other, with her foot on Tyranny, which is represented by a prostrate man, with a crown fallen from his head, a broken chain in his left hand, and a scourge in his right.

WASHINGTON TERRITORY is situated north of Oregon territory, of which it formerly constituted a part, and consists of that portion of the latter territory lying south of 49° north latitude, and north of the middle of the main channel of the Columbia river from its mouth to where it is crossed by the forty-sixth parallel of north latitude, near Fort Walla-walla, and thence following that parallel to the summit of the Rocky mountains. Its superficial area is about 140,000 square miles. Its physical aspect, climate, resources, &c., are similar to those of Oregon territory, and are fully detailed under that head. It was erected into a separate territory by act of Congress, March 2, 1853. The law of Congress organizing the territory authorized the reservation of two sections of land in every township for the support of common schools. All laws, Congressional or territorial, in force in Oregon territory, are to remain in force in Washington territory until they shall be repealed or amended by future legislation.

WASHINGTON COUNTY, situated at the southeast corner of Maine, with the Atlantic ocean on the southeast, St. Croix river and Passamaquoddy bay on the northeast, and Schoodic lake toward the north. Area, 3,500 square miles. Face of the country, uneven; soil, suitable for grazing. Seat of justice, Machias. Pop. in 1810, 7,870; in 1820, 12,744; in 1830, 21,295; in 1840, 28,327; in 1850, 38,113.

WASHINGTON COUNTY, situated toward the north part of Vermont. Area, 425 square miles. Face of the country, mountainous; soil, generally good. Seat of justice, Montpelier. Pop. in 1820, 14,113; in 1830, 21,378; in 1840, 23,506; in 1850, 24,654.

WASHINGTON COUNTY, situated on the south boundary of Rhode Island, with the Atlantic ocean on the south, and Narraganset bay on the east. Area, 367 square miles. Face of the country, uneven; soil, of middling quality. Seat of justice, South Kingston. Pop. in 1810, 14,969; in 1820, 15,687; in 1830, 15,414; in 1840, 14,324; in 1850, 16,543.

WASHINGTON COUNTY, situated on the east boundary of New York, with Hudson river on the west, and Lake George on the northwest. Area, 607 square miles. Face of the country, diversified and picturesque; soil, well watered and generally fertile. Seats of justice, Salem and Sandy Hill. Pop. in 1810, 36,724; in 1820, 38,831; in 1830, 42,635; in 1840, 41,080; in 1850, 44,750.

WASHINGTON COUNTY, situated on the west boundary of Pennsylvania, with Monongahela river on

the east. Area, 1,000 square miles. Face of the country, hilly; soil, productive. Seat of justice, Washington. Pop. in 1810, 36,289; in 1820, 40,038; in 1830, 42,680; in 1840, 41,279; in 1850, 44,939.

WASHINGTON COUNTY, situated on the north boundary of Maryland, with Potomac river on the southwest. Area, 440 square miles. Face of the country, broken and mountainous; soil, where alluvial, fertile. Seat of justice, Hagerstown. Pop. in 1810, 18,730; in 1820, 23,075; in 1830, 25,268; in 1840, 28,850; in 1850, 30,848.

WASHINGTON COUNTY, situated in the District of Columbia, with Potomac river on the southwest. Area, 64 square miles. Face of the country, hilly; soil, of middling quality. Seat of justice, Washington. Pop. in 1810, 15,471; in 1820, 23,336; in 1830, 30,858; in 1840, 33,735; in 1850, 51,687.

WASHINGTON COUNTY, situated on the south boundary of Virginia. Area, 764 square miles. Face of the country, hilly; soil, fertile. Seat of justice, Abington. Pop. in 1810, 12,136; in 1820, 12,444; in 1830, 15,614; in 1840, 13,001; in 1850, 14,612.

WASHINGTON COUNTY, situated in the east part of North Carolina, with Albemarle sound and Roanoke river on the north. Area, 360 square miles. Face of the country, level and marshy; soil, thin and sterile. Seat of justice, Plymouth. Pop. in 1810, 3,464; in 1820, 3,986; in 1830, 4,552; in 1840, 4,525; in 1850, 5,664.

WASHINGTON COUNTY, situated toward the east part of Georgia, with Oconee river on the southwest. Area, 760 square miles. Seat of justice, Sandersville. Pop. in 1810, 9,940; in 1820, 10,627; in 1830, 9,830; in 1840, 10,565; in 1850, 11,766.

WASHINGTON COUNTY, situated on the south boundary of Florida, with the gulf of Mexico on the south, and Choctawhatchee river and bay on the west. Area, 1,500 square miles. Seat of justice, Roche's bluff. Pop. in 1840, 859; in 1850, 1,950.

WASHINGTON COUNTY, situated on the west boundary of Alabama, with Tombigbee river on the east. Area, 840 square miles. Face of the country, uneven; soil, sterile. Seat of justice, Old Washington. Pop. in 1830, 3,478; in 1840, 5,300; in 1850, 2,713.

WASHINGTON COUNTY, situated on the west boundary of Mississippi, with Mississippi river on the west, and the Yazoo on the east. Area, 2,420 square miles. Seat of justice, Greenville. Pop. in 1840, 7,287; in 1850, 8,389.

WASHINGTON COUNTY, situated on the southeast boundary of Tennessee, and traversed by Nolichucky river. Area, 590 square miles. Face of the country, hilly and broken. Seat of justice, Jonesborough. Pop. in 1810, 7,740; in 1820, 9,557; in 1830, 10,995; in 1840, 11,751; in 1850, 13,861.

WASHINGTON COUNTY, situated in the central part of Kentucky. Area, 475 square miles. Seat of justice, Springfield. Pop. in 1810, 13,249; in 1820, 15,947; in 1830, 19,017; in 1840, 10,596; in 1850, 12,194.

WASHINGTON COUNTY, situated on the southeast boundary of Ohio, with Ohio river on the southeast, and traversed by Muskingum river. Area, 713 square miles. Face of the country, hilly; soil, near the rivers, good; elsewhere, unproductive. Seat of justice, Marietta. Pop. in 1820, 10,425; in 1830, 11,731; in 1840, 20,823; in 1850, 29,540.

WASHINGTON COUNTY, situated in the south part of Indiana. Area, 540 square miles. Seat of justice, Salem. Pop. in 1820, 9,039; in 1830, 13,064; in 1840, 15,269; in 1850, 17,040.

WASHINGTON COUNTY, situated toward the south part of Illinois, with Kaskaskia river on the northwest. Area, 656 square miles. Seat of justice, Nashville. Pop. in 1820, 1,517; in 1830, 1,674; in 1840, 4,810; in 1850, 6,953.

WASHINGTON COUNTY, situated in the east part of Missouri. Area, 820 square miles. Face of the country, mountainous; soil, varied. Seat of justice, Potosi. Pop. in 1830, 6,784; in 1840, 7,231; in 1850, 8,811.

WASHINGTON COUNTY, situated on the east boundary of Wisconsin, with Lake Michigan on the east. Area, — square miles. Seat of justice, Ozaukee. Pop. in 1840, 343; in 1850, 19,485.

WASHINGTON COUNTY, situated in the southeasterly part of Iowa, with Iowa river on the northeast. Area, 648 square miles. Seat of justice, Washington. Pop. in 1840, 1,594; in 1850, 4,957.

WASHINGTON COUNTY, situated on the east boundary of Minnesota, with St. Croix river on the

east. Area, — square miles. Seat of justice, —. Pop. in 1850, 1,056.

WASHINGTON COUNTY, situated on the west boundary of Arkansas. Area, 900 square miles. Face of the country, hilly. Seat of justice, Fayetteville. Pop. in 1830, 2,122; in 1840, 7,148; in 1850, 9,567.

WASHINGTON COUNTY, situated in Oregon territory. Area, — square miles. Seat of justice, —. Pop. in 1850, 9,970.

WASHINGTON PARISH, situated on the north boundary of Louisiana, with Pearl river on the east. Area, 792 square miles. Face of the country, uneven; soil, sterile. Seat of justice, Franklinton. Pop. in 1820, 2,517; in 1830, 2,286; in 1840, 2,649; in 1850, 3,408.

WASHINGTON, city, D. C., the capital of the United States, is pleasantly situated on the east bank of the Potomac river, in latitude $38^{\circ} 53' 34''$ north, and longitude $77^{\circ} 1' 30''$ west from Greenwich. It is 195 miles from the ocean, following the course of the river, 225 miles southwest of New York, and 1,203 miles northeast of New Orleans. The city is built on a point of land formed by the confluence of the Potomac and the Anacostia rivers, which afford a good harbor for vessels of the largest class. Commerce, however, flows naturally toward Baltimore, leaving to Washington perhaps a less rapid but more quiet growth. A more beautiful site for a city could hardly be obtained. It was selected by Washington as the fittest locality for the seat of the national government, and the city was laid out under his direction. It is said his attention was called to the advantages of this location as long previous as when he had been a youthful surveyor of the country around. Pleasant slopes, decked with elegant mansions, surrounded by hills and varied scenery, and the general aspect and airiness of the town, conduce to render Washington an agreeable place of residence. The city is planned on a grand scale, and, if ever built up as originally designed, would be one of the finest cities in the world. By this plan, seven spacious avenues were laid out, to diverge from the capitol as a centre, and

five avenues form rays from the president's house, the latter building and the capitol being each situated on beautiful eminences, about one and a half miles apart, and connected by Pennsylvania avenue, now the principal street in the city. The avenues are named after different states, and are crossed diagonally by streets running east and west, named after the letters of the alphabet, and others running north and south, which are named after numbers. The avenues and streets leading to public places are from 120 to 160 feet wide, and the other streets are from 70 to 110 feet wide. Only a comparatively small part of its extensive site is yet covered by buildings, which, in connection with its spacious avenues, has given it the designation of the "city of magnificent distances." A bridge a mile long crosses the Potomac, another the Anacostia (sometimes termed the eastern branch of the Potomac), and two others, over Rock creek, connect Washington with Georgetown. On the Anacostia is a navy-yard, occupying an area of 27 acres.

The capitol is justly regarded as one of the finest national buildings in the world. It stands on a gentle eminence, in the midst of a beautiful space of 23 acres, highly ornamented with trees, shrubbery, &c. The dome, which is 120 feet from the ground, is the first object which strikes the eye from a distance. The edifice is of freestone, and, as originally built, consisted of a central part and two wings. The width of the whole building was 352 feet, and depth of the wings 121 feet, all occupying an area of one and a half acres. But, in the addition of new states to the Union, with the consequent numerical increase of congressional representation, the capitol, on its original plan, has become too limited, and an enlargement was commenced in 1851, and is being rapidly pressed to completion. These additions will consist of two wings at the ends of the buildings, with which they will be connected by corridors, or piazzas, 44 feet long and 50 feet wide. The wings will each be 143 feet by 238, exclusive of porticoes and steps; and the entire length of the building, when completed, will be 751 feet, and the area it covers 153,112 square feet, or over three and a half acres. Beneath the dome is the rotunda, a spacious apartment 96 feet high, and of the same diameter. On its walls the magnificent national paintings of Trumbull, Chapman, Wier, and Vanderlyn, are hung. The room is also adorned with baso-relievo groups, representing prominent events in American history. The senate-chamber is in the north wing, and the hall of the house of representatives in that of the south. Under the senate-chamber is the room where the supreme court sits. These apartments are all richly furnished, and ornamented with statuary and paintings.

The president's house is a noble and spacious edifice, also of freestone. It is 170 feet long, and 86 feet wide, with Ionic pilasters, comprehending two lofty stories, with a stone balustrade. The north front is ornamented with a portico, sustained by four Ionic columns, with three projecting columns, affording a shelter for carriages to drive under. The garden, or southern front, is embellished by a circular colonnade of six Ionic columns. The interior of the president's house possesses one superb reception-room, commonly known as the "East room," and two oval drawing-rooms, one in each story, of very beautiful proportions. The house stands in an enclosed area of some twenty acres, and commands from its balcony one of the loveliest prospects in the country.

Near the president's house are the buildings occupied by the state, treasury, war, and navy departments. The United States treasury is 300 feet long, with a wing in the rear of 100 feet. Along the front is a colonnade, composed of 23 columns, of massive proportions. The general postoffice is a splendid marble building, with two wings, and adorned with pilasters. The patent-office is a spacious and noble-looking building. The models of inventions are here placed on exhibition, and form an interesting development of the genius of our country.

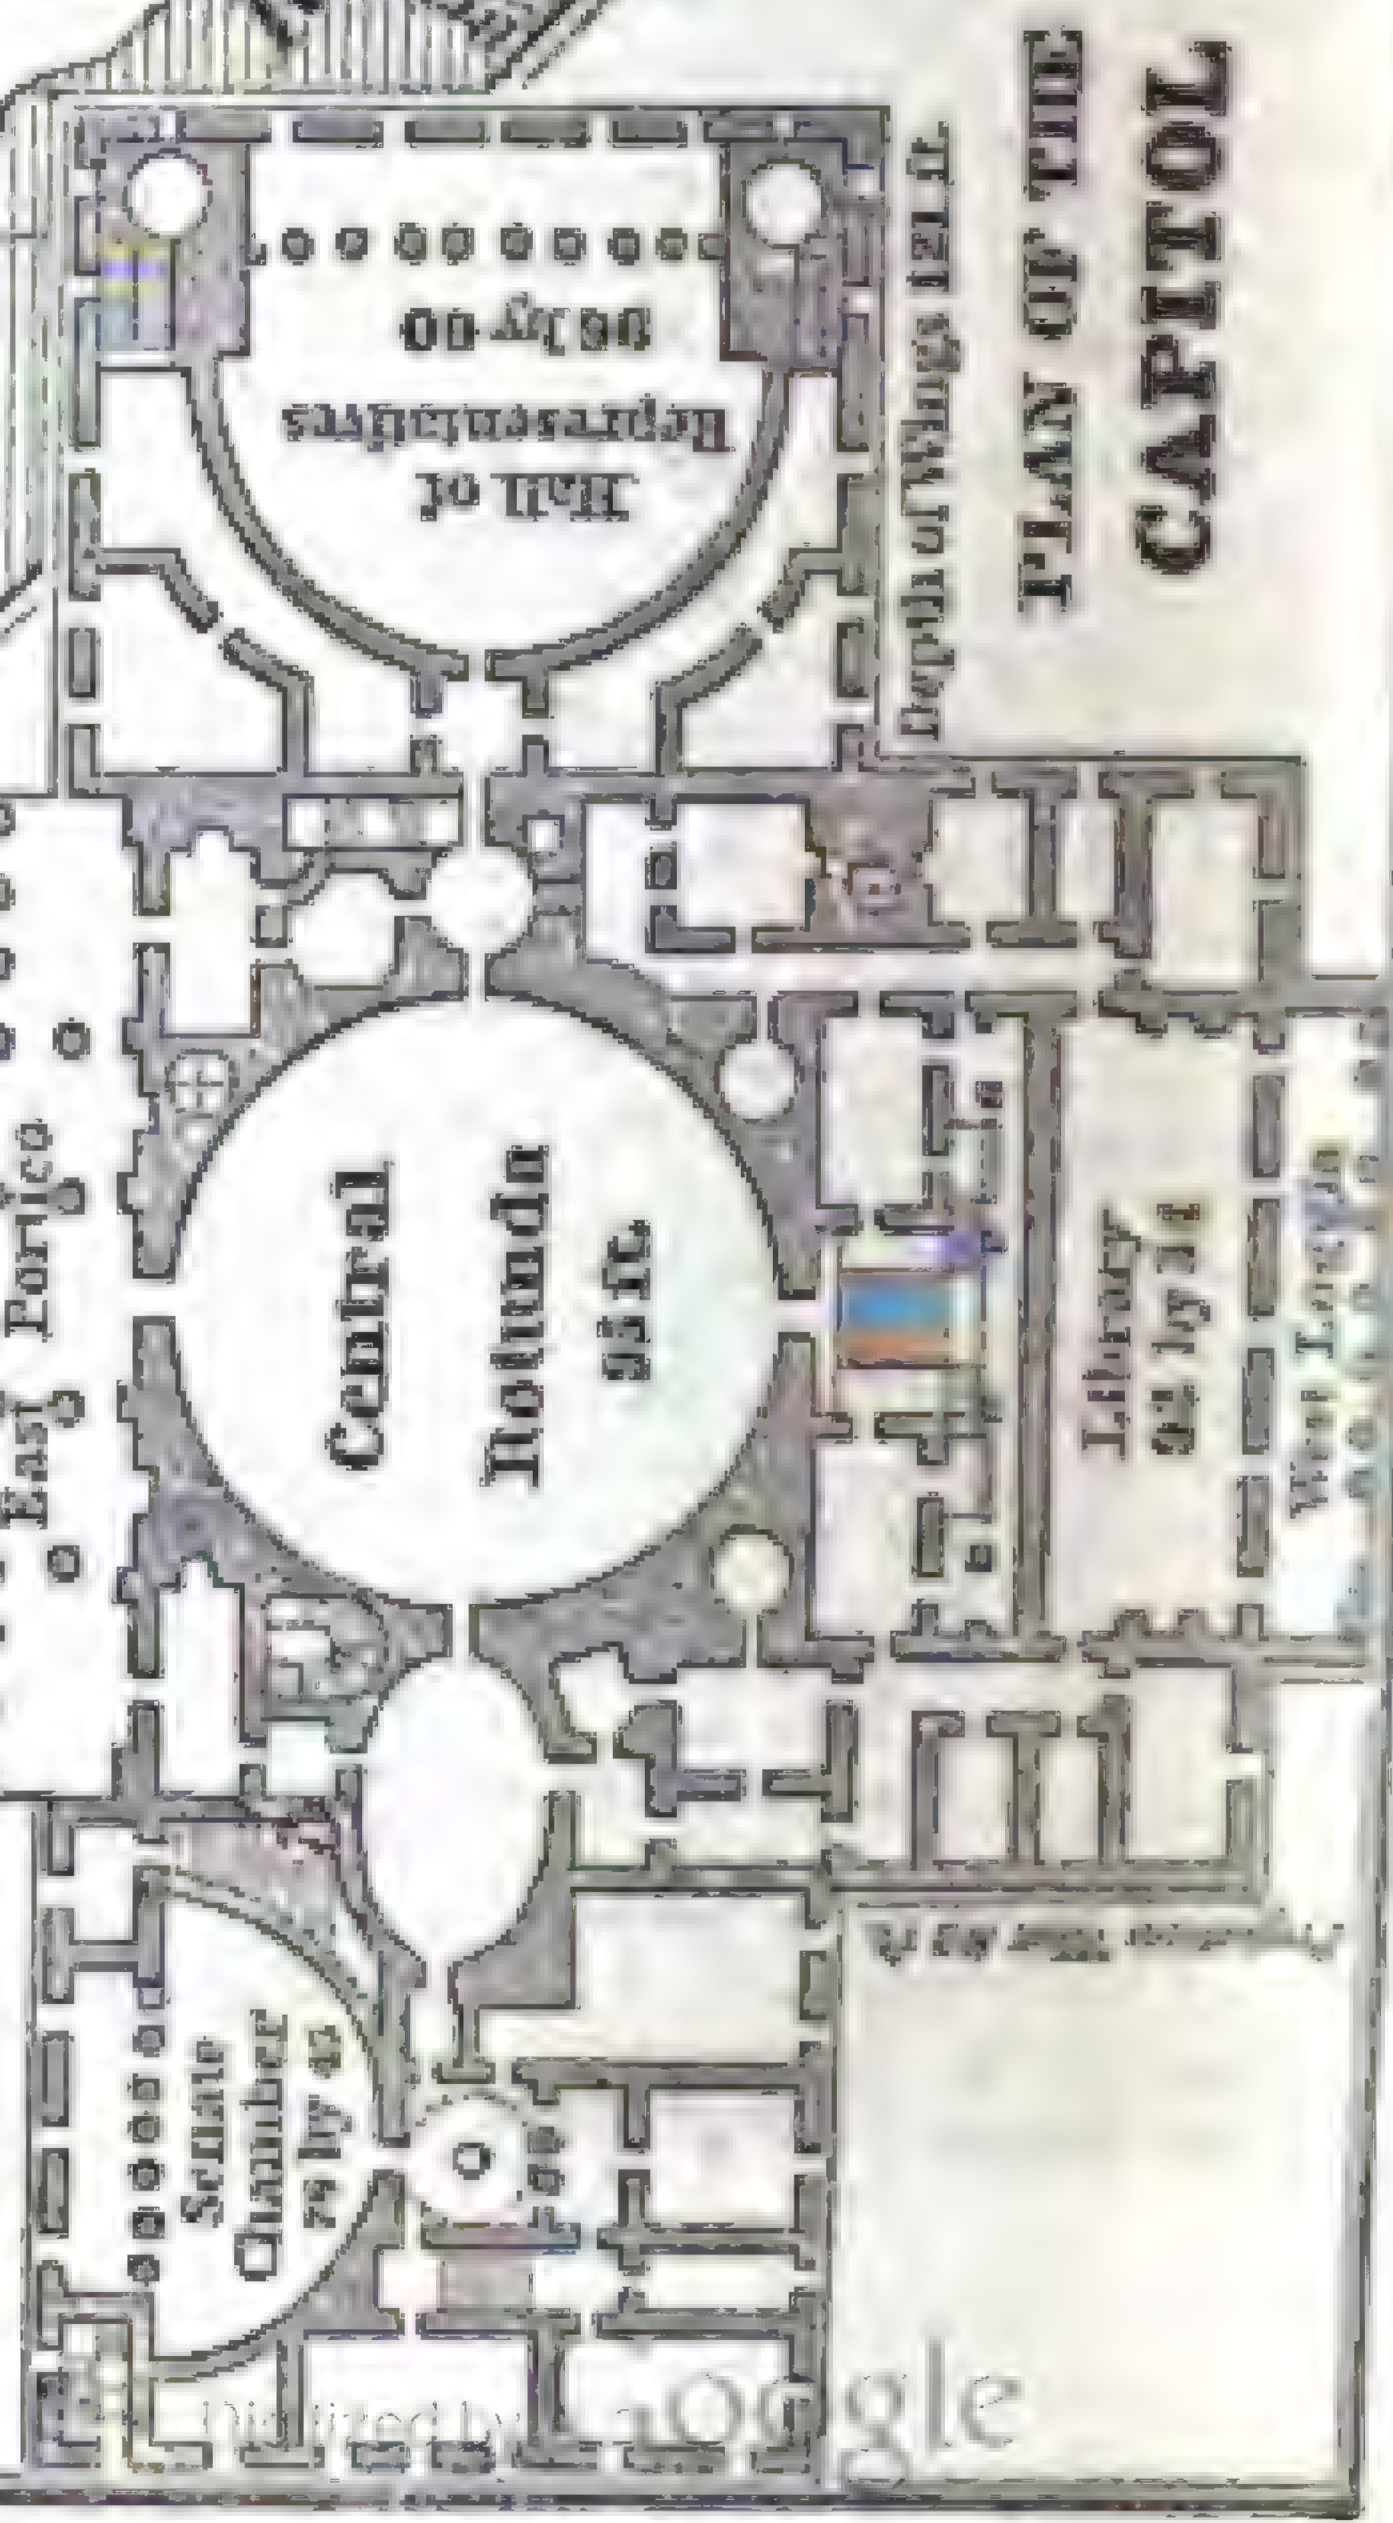

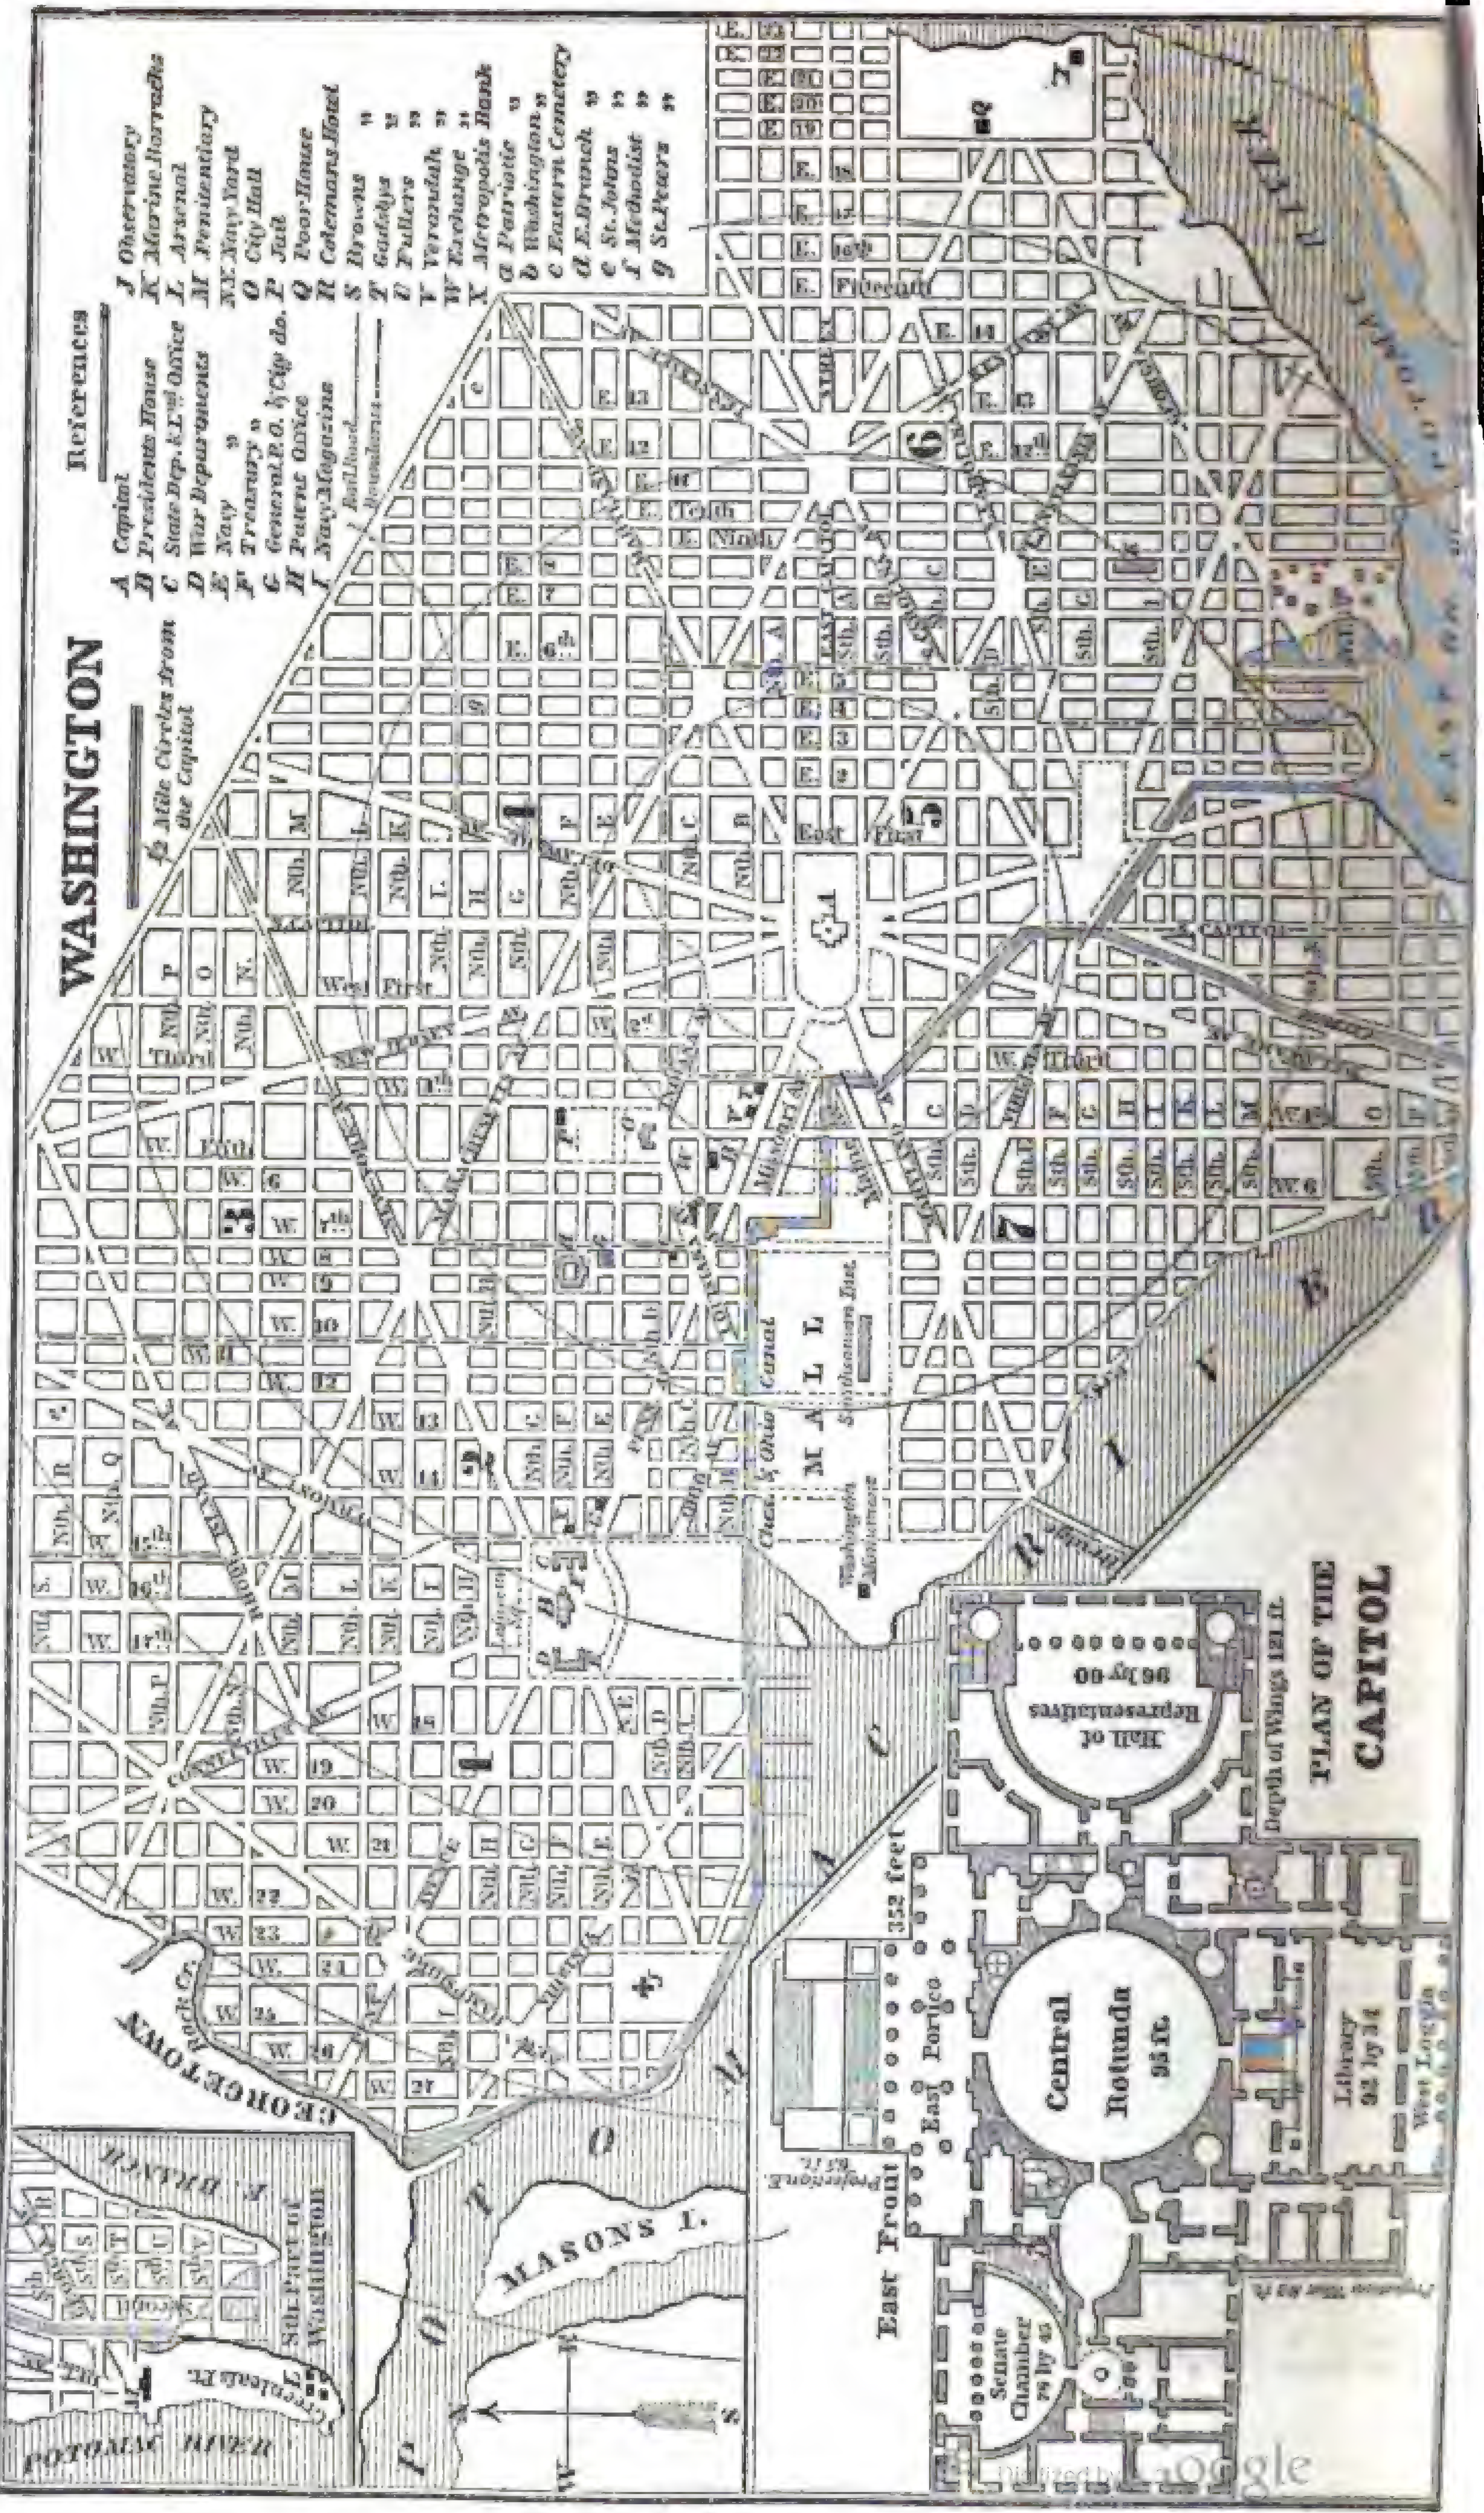

The erection of the Washington monument is steadily progressing, and has reached a considerable altitude. The most prominent and imposing object of this colossal structure will be the obelisk shaft rising through the centre to the height of 600 feet, 70 feet square at the base, and 40 at the top. The several states of the Union, and many associations, have each prepared a stone, bearing an appropriate inscription, to be placed in the monument.

WILLIAMSBURGH, p. t., Hampshire co., Mass., 100 ms. W. of Boston; from W. 388 ms. Watered by Mill river. Pop. 1,537.

WILLIAMSBURGH, city, Kings co., N. Y., 147 ms. S. of Albany; from W. 227 ms. Watered by Bushwick creek and East river, the latter of which separates it from the city of New York. It is built on a slope, gently rising from the water for about a third of a mile, and then descending toward the east a distance of about a mile more. From the pleasant heights of North Brooklyn, at the south of this city, appears an interesting panorama of the towns which thickly cluster around this part of Long Island. Brooklyn, resting on somewhat

elevated ground, and bending around a wide circuit, is every day blending more closely with Williamsburgh. Far toward the east and north spreads the latter city, and north of this the pleasant villas of Greenpoint, Ravenswood, and Astoria; while the East river separates these from the great forest of masts and spires on the opposite shores. From the river, Williamsburgh presents a fine effect; its tall steeples, and a number of imposing manufactories along its water-front, add much to the picturesque quality of the place. Its streets are regular, generally well paved, lighted with gas, and ornamented with trees. Here a large number of persons who do business in New York reside, crossing daily by the four steam-ferries, the boats of which ply constantly between the two cities; other citizens are extensively engaged in ship-building, and in the manufacture of blocks, cordage, marble, glue, glass, chemicals, oil, castings, buttons, and lamps.

The progress of Williamsburgh is one of the phenomena of the age. Thirty years ago, a few insignificant buildings stood on the ground now covered by its northern part. After slowly increasing for about twenty years, it received a new impetus, and rose, in ten years, from a village of 5,000 souls, to the sixth city of the Empire state. It is destined to a still higher rank. Williamsburgh was formerly a part of the town of Bushwick, and was incorporated as a village in 1827; with extended powers in 1835, and as a city in 1851. The population of Bushwick, in 1820, was 930; of Williamsburgh, in 1830, 1,620; in 1840, 5,680; in 1850, 30,780.

WILMINGTON, city, seat of justice, together with New Castle, of New Castle co., Del., situated between Christiana creek and Brandywine river, two miles from the entrance of the latter into the Delaware, 28 miles southwest of Philadelphia, and 70 miles northeast of Baltimore. The ground on which it is built rises from the river to an elevation of 112 feet, and offers a pleasant prospect of the neighboring scenery. The streets are broad and rectangular, and the houses, generally of brick, are many of them costly and beautiful. Wilmington has the usual number of public buildings, but the most interesting are the flour-mills, to which it owes its celebrity. These are situated near the falls of the Brandywine, not far from the town, and afford an extensive water-power. To this point, vessels ascend drawing eight feet of water, those of fourteen feet draught navigating both streams to the city. The Christiana admits vessels of eight feet draught, eight miles further up. A large number of ships anchor at Wilmington, receiving and exporting the produce of the mills and manufactories in its vicinity; others are employed in the whale-fishery. Each of the streams are crossed by bridges, and the Philadelphia, Wilmington, and Baltimore railroad communicates with this city. Five miles from Wilmington are the Brandywine chalybeate springs, the salubrious waters of which contribute much to the health and recreation of the visitors. The population in 1810, was 4,416; in 1820, 5,268; in 1830, 6,628; in 1840, 8,367; in 1850, 13,979.

WILMINGTON, p. o., Fluvanna co., Va., 58 ms. N. W. of Richmond; from W. 132 ms. Watered by Rivanna river.

WILMINGTON, p. v., seat of justice of New Hanover co., N. C., situated on Cape Fear river, 35 miles from the sea, 148 miles southeasterly from Raleigh, and 365 miles from Washington. A large shoal at the mouth of the harbor, in a great measure destroys the effect of its other natural advantages. Two islands divide the river into three channels opposite the town. They afford the finest rice-fields in the state. The great body of the exports and imports of North Carolina pass through this port, and it is the terminus of the Washington and Wilmington chain of railroads. The population in 1810, was about 2,000; in 1830, 2,700; in 1840, 4,744; in 1850, 7,264.

WISCONISCO, t., Dauphin co., Pa. (See Wiconisco.)

WISCONSIN, one of the United States, situated between 42° 30' and 47° north latitude, and 87° and 92° 40' w. longitude from Greenwich;—and is bounded on the north by Lake Superior; on the northeast by the peninsula of Michigan (from which it is separated in part by Menomonee river); east by Lake Michigan; south by Illinois; and

west by Iowa and Minnesota (from which it is separated in part by the Mississippi river). Its superficial area is 53,924 square miles.

Physical Aspect.—The face of the country is rather undulating, than either hilly or flat, though both extremes exist. The highest lands in the state are those forming the dividing ridge between the Mississippi and Lake Superior. From this ridge, toward the south and southwest, the descent is gradual, until the inclination is interrupted by another ridge, in the region of the Wisconsin and Neenah rivers, which extends across the state. From the latter ridge proceeds another gentle inclined plain, down which flow the waters of Rock river and its branches into the Illinois. Along the Mississippi, Wisconsin, and Helena rivers, there are numerous hills and bluffs, varying from 300 to 1,000 feet in height above the surface of these streams. The country bordering directly on Superior has a very precipitous descent toward the lake. From the entrance of Green bay there is another ridge of broken land, running in a southwesterly direction, more or less uninterrupted, until it passes the confines of the state. The soil is generally of great fertility, and productive of all northern crops, in most situations that are not marshy or too wet. In Dane county, it is stated that the soil is composed, for the most part, of the black deposit of decayed vegetation, which for countless ages has flourished in wild luxuriance, and rotted upon the surface; of loam; and, in a few localities, of clay mixed with sand. The deposit of vegetable mould has uniformly several inches of thickness on the tops and sides of hills; in the valleys it is frequently a number of feet. A soil thus created, of impalpable powder, formed of the elements of organic matter—"the dust of death"—we need scarcely remark, is adapted to the highest and most profitable purposes of agriculture; yielding crop after crop, in rank abundance, without any artificial manuring.

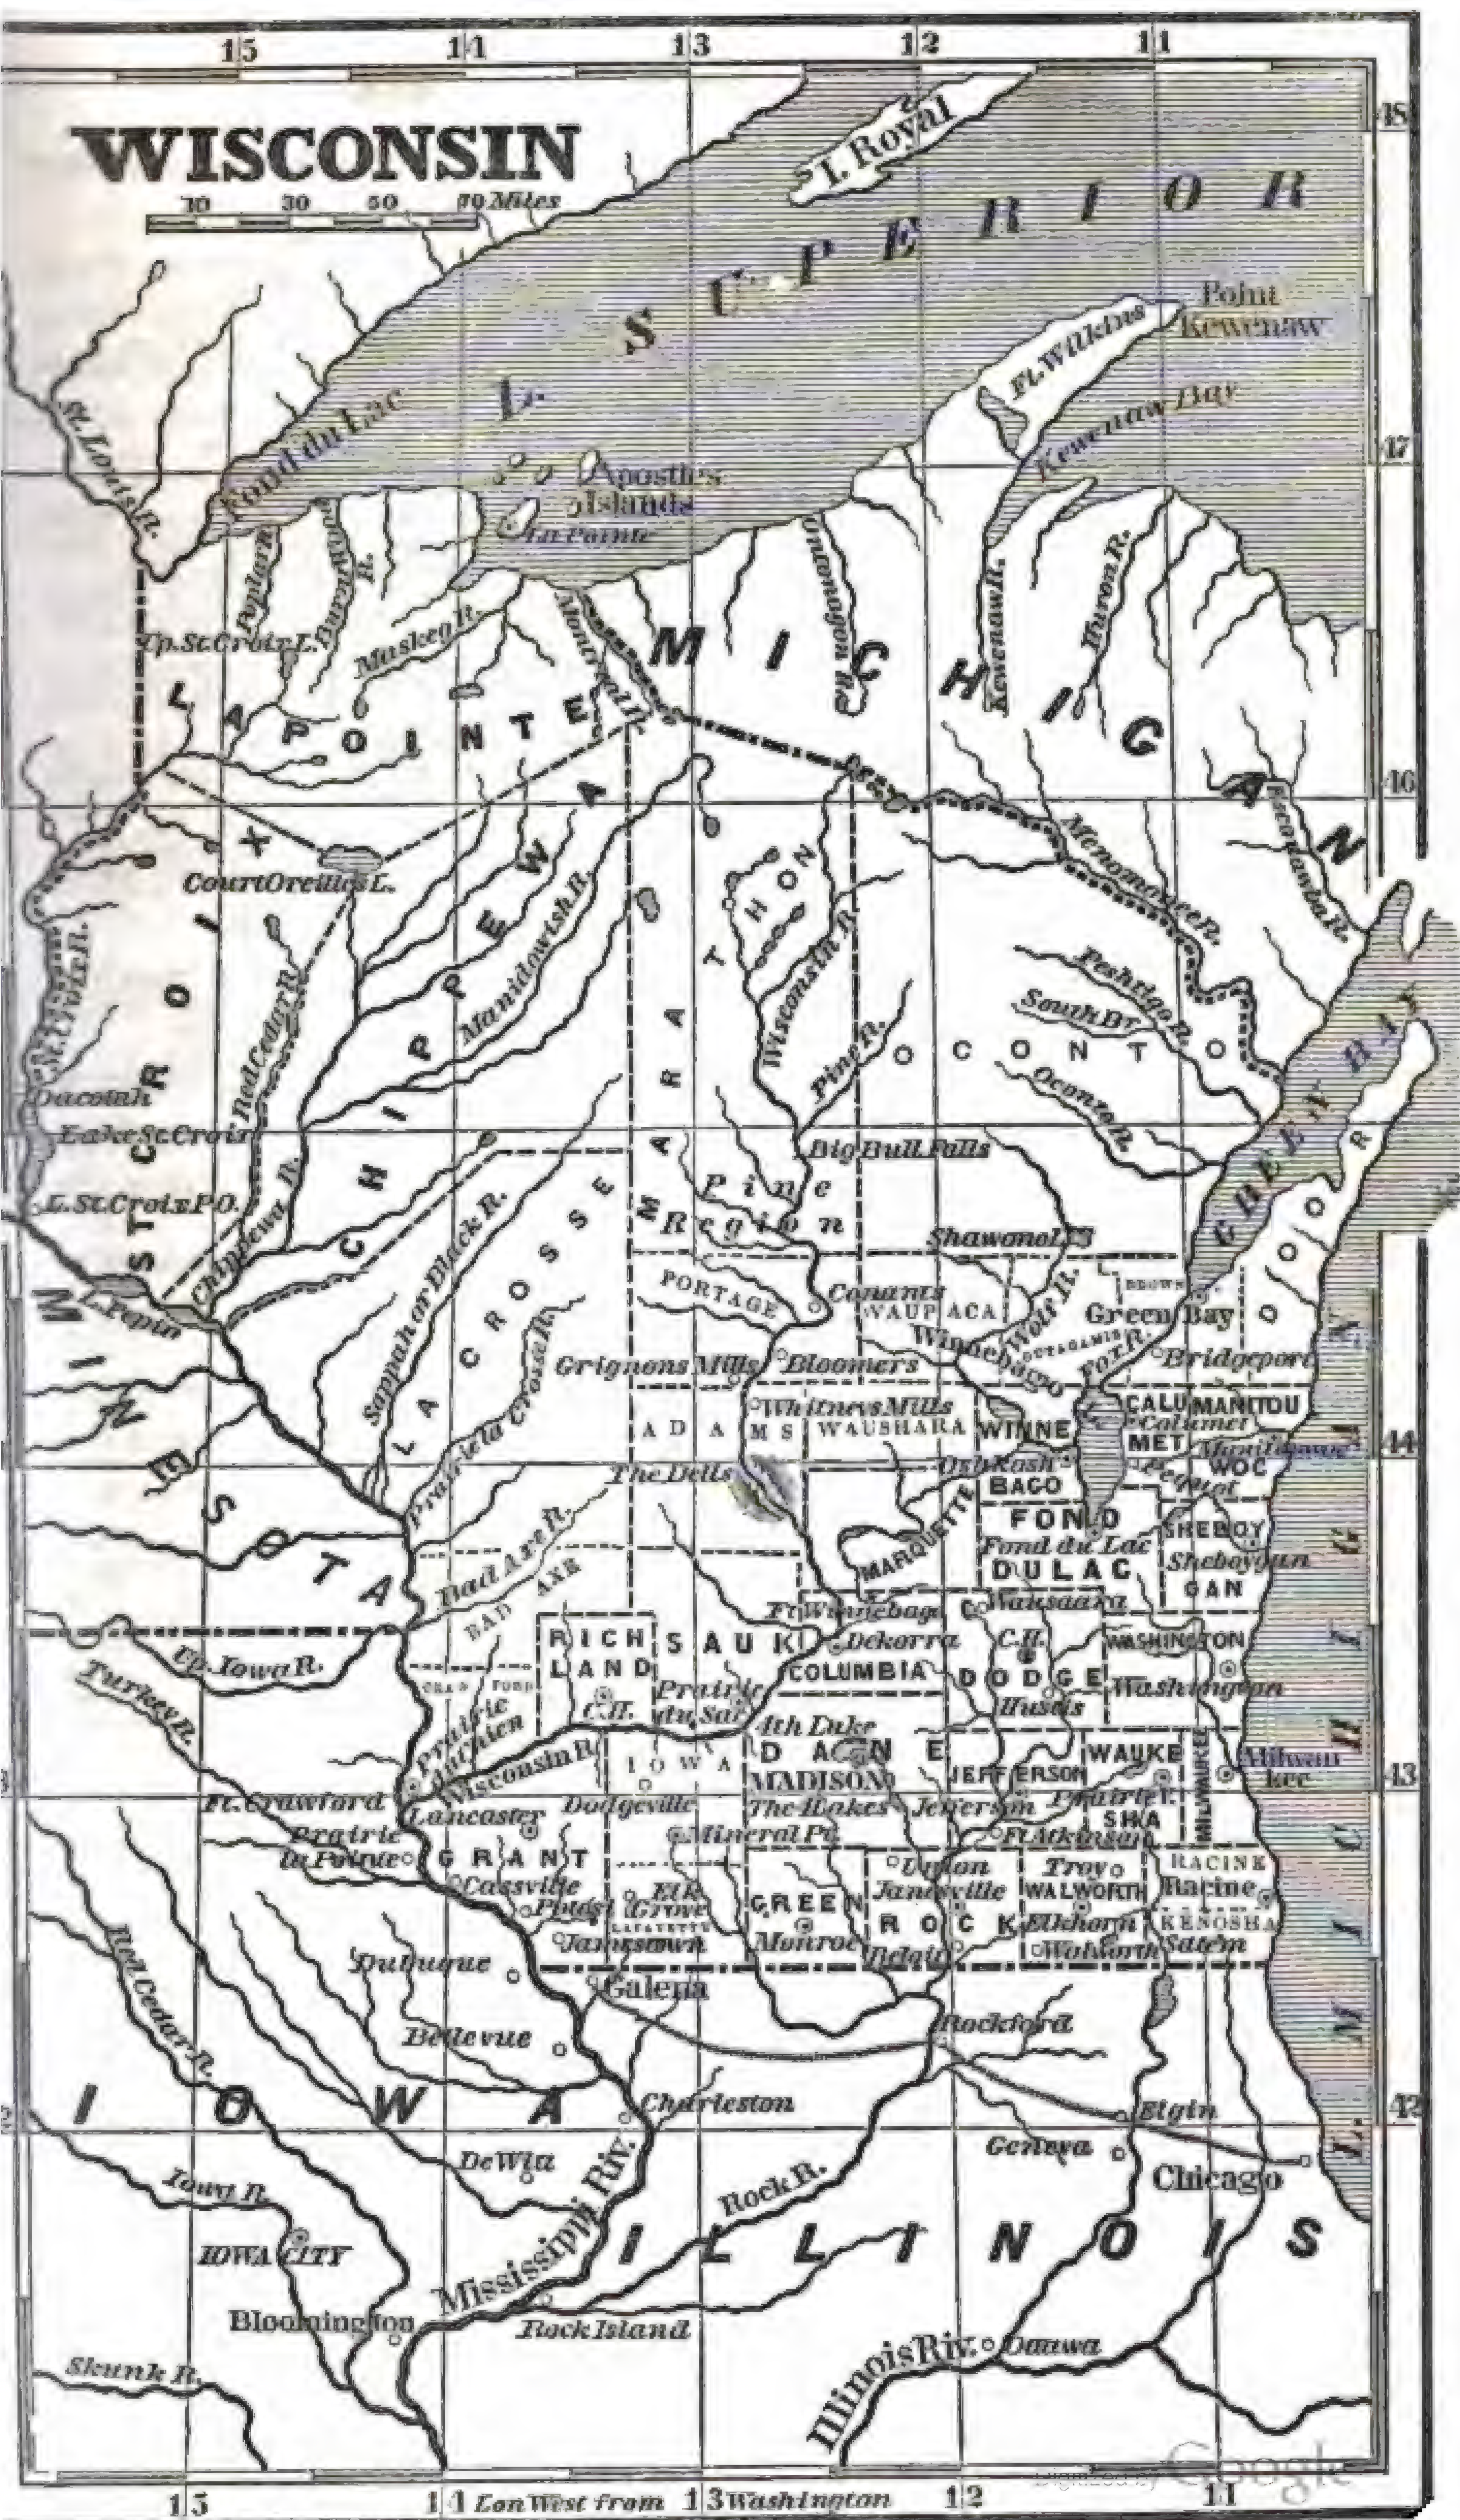

Rivers, Lakes, and Bays.—The chief rivers are, the Mississippi, Wisconsin, Rock, St. Louis, Montreal, Baraboo, Wolf, Fox or Neenah, Black, Chippewa or Ojibwa, Catfish, and the Menomonee. The principal lakes, besides Superior and Michigan, are, Winnebago, Four Lakes, Wingra, Koshkonong, Packawa, Buffalo, Green, Little Green, Pewaugone, Great and Little Butte-des-Morts, Maquanago, Wissaur, Kanchee, La Belle, Nagowicka, Oconomewoc, Nashotah (Twin Lake), Como, Delavan, Geneva, Deer, Sarah, Swan, Mud, Katakitekon, or Lac Vieux Desert. The chief bays are the Chogowawagon and Fond du Lac, in Lake Superior, and a part of Green bay in Lake Michigan.

Islands.—These are, Bartlett's, Apostles', Stocton's, and Madeline, in Lake Superior, and Doty's island, in Fox river.

Climate.—The climate of this state, notwithstanding its high northern latitude, is more favorable than that of corresponding parallels in New England and New York. Yet its winters are severe and long, with continued deep snows for several months, and the lakes and streams are strongly locked up in ice. The harbor

WISCONSIN

10 30 50 70 Miles

of Milwaukee is usually closed from the middle to the end of November, and is opened in the spring sometimes as early as the first week in March, while in other seasons it is closed as late as the middle of April. During the growing season, however, vegetation springs up as if by magic, and puts forward with astonishing rapidity and luxuriance. Spring and autumn are usually mild, and are less liable to destructive frosts than the more easterly states.

Productive Resources.—The chief products of this state are, horses, mules, neat cattle, sheep, swine, poultry, butter, cheese, wax, sugar, wool, hemp, flax, wheat, rye, barley, buckwheat, oats, potatoes, and Indian corn. Of the mineral wealth, lead, copper, and iron, are found in considerable abundance, but have not, as yet, been extensively wrought.

Manufactures.—This state is yet too young in years to have made much progress in manufactures. More than nine tenths of the people are engaged in agriculture, and a portion of the remaining tenth are engaged in mining. In 1850, there were in the state 1,273 manufacturing establishments, which produced \$500 and upward each annually.

Railroads and Canals.—There are several railroads being constructed, or are already in operation, in Wisconsin. Among them are, one from Milwaukee to Galena, 70 miles long, forming a junction with the Chicago and Galena Union railroad; and the Rock River road, extending from Chicago, Illinois, to Fond du Lac, in this state. Plank-roads are also constructed here to a considerable extent, the abundance of lumber and the level surface of the country offering ready facilities for their construction. The Portage canal, connecting the Fox and Wisconsin rivers, and through them the great lakes with the Mississippi river, is an important internal improvement.

Commerce.—Lying, as this state does, with two of the great inland seas for its northern and eastern boundaries, and the Mississippi upon its western border, Wisconsin possesses commercial facilities not exceeded by those of any other of the western states.

Education.—The principal educational institutions of the higher class in this state are, the Wisconsin university, at Madison, founded in 1849, and the Beloit college, founded in 1847. There is also a theological seminary (Roman catholic) at Milwaukee. The educational resources of the state are extensive. The school-fund consists of the proceeds of about 2,000,000 of acres of land, five per cent. of the proceeds of all United States lands in the state, and moneys arising from several minor sources.

Population.—In 1840, 30,945; in 1850, 305,191.

Government.—The legislative power is vested in an assembly, of not fewer than 54 nor more than 100 members, chosen annually; and in a senate, numbering not less than a third nor more than one half the members of assembly, chosen for two years, one half each year. The executive power is vested in a governor and lieutenant-governor, who are chosen by a plurality vote for two years. The judicial power is vested in a supreme court, circuit courts, and probate courts, the judges of which are all chosen by the people—supreme and circuit judges for six years, and probate judges and justices of the peace for two years. State election the Tuesday succeeding the first Monday in November. All white male citizens of the United States, or white foreigners, who have declared their intentions to become citizens, who have resided in the state one year, have the right of suffrage.

History.—The first European settlement made within the limits of the present state of Wisconsin was by the French missionary Claude Allouez, and others, at La Pointe, on Madeline island, in the western end of Lake Superior, in 1665. This state embraces a part of the territory of Upper Louisiana, as claimed by the French, prior to 1763, when it was ceded to England, together with all their territory east of the Mississippi, under whose jurisdiction it remained until the treaty of Grenville, in 1795. The year following it was ceded to the United States, and in 1800 it was annexed to the "Territory northwest of the River Ohio." In 1802, Ohio was detached and formed into an independent state; and, in 1805, a territorial government was established in Michigan, under whose jurisdiction for civil purposes Wisconsin remained until 1836, when it was erected into a distinct territory. In 1847, Wisconsin, with its present boundaries, was formally admitted into the Union as a sovereign state. Motto of the seal, *Civilitas*

successu Barbarum: "Civilization has succeeded Barbarism."

WORCESTER, city, seat of justice of Worcester co., Mass., 42 ms. W. of Boston; from W. 425 ms. It is situated in a pleasant valley, surrounded by gentle hills, laid out with regularity and taste, its streets animated by industry, and beautified by nature with shady trees and pleasant gardens. It is, in fact, a New England village. Here, as veins at the heart, concentric railroads from Boston, Providence, Norwich, Springfield, Hartford and New Haven, New York, the valley of the Hudson, New Hampshire, and Vermont, which discharge their burdens, and bear away as swiftly the productions of Worcester and the fruitful region which surrounds it. The Blackstone canal, 45 miles long, forms another channel of communication with Providence. The state lunatic asylum, and the hall of the American Antiquarian Society, are the most prominent public buildings. The population in 1810 was 2,577; in 1820, 2,962; in 1830, 4,172; in 1840, 7,497; in 1850, 17,049.

 ZANESVILLE, p. v., Logan co., O., 64 ma. n. w. of Columbus; from W. 451 ma. Watered by head waters of Mad river.
 ZANESVILLE, c. h., p. t., seat of justice of Muskingum co., O., situated on the east side of Muskingum river, opposite the mouth of the Licking, and one of the most enterprising and flourishing towns in the interior of the state. It is 54 miles east of Columbus, and 359 miles from Washington. The river is navigable to the falls near the town; and a canal, passing round this obstruction, enables boats to ascend to Coshocton, about 25 miles above, and furnishes a great water-power. A number of dams and locks in the vicinity, serve to keep in operation the various manufactories of woollen, cotton, and other fabrics, which contribute to Zanesville its prosperity and importance, as well as to afford means of communication with the Ohio canal and surrounding points. On the west bank of the Muskingum, are Putnam and West Zanesville, two flourishing villages, intimately connected with the town, not only by two bridges, but also by reciprocal interests and operations. Population in 1830, 3,216; in 1840, 4,766 or including the adjacent places, 7,000; in 1850, 7,929.
 ZANESVILLE, p. v., Montgomery co., Ill., 38 ma. s. of Springfield; from W. 784 ma.
